Emerging Markets Infrastructure Equity Fund	Select Emerging Markets Investment Grade Bond Fund
Emerging Markets Local Currency Bond Fund	Select Euro High Yield Bond Fund
Emerging Markets Local Currency Corporate Bond Fund	UK Equity Fund
Emerging Markets Smaller Companies Fund	US Dollar Credit Bond Fund
Emerging Markets Sustainable and Responsible Investment Equity Fund	US Dollar Short Term Bond Fund
Emerging Markets Sustainable Development Equity Fund	World Credit Bond Fund
Emerging Markets Total Return Bond Fund	World Equity Fund
Euro Government Bond Fund	World Resources Equity Fund
Euro Short Term Bond Fund	World Smaller Companies Fund
European Equity (ex-UK) Fund	

The full name of each Fund is constituted by the name of the Company, Aberdeen Standard SICAV I, followed by a hyphen and then the specific name of the Fund. Throughout the Financial Statements, the Funds are referred to by their short names as indicated above.

No subscriptions can be received on the basis of this document. Subscriptions are only valid if made on the basis of the current prospectus or on the Key Investor Information Document, accompanied by a copy of the latest annual report or of the subsequent semi-annual report if it has been published.

Please see the Notes to the Financial Statements for changes during the year.

Report of the Board of Directors

As at 30 September 2021, the total net assets of Aberdeen Standard SICAV I (the "Company") stood at USD 25,554,287,000.

The Company aims to provide investors with a broad international range of diversified actively-managed Funds. There are 63 active subfunds in total, each with its own specific investment objectives and individual portfolios, offering investors the opportunity of exposure to selected areas or to conveniently build a diversified global stock and bond portfolio to meet specific investment goals. The overall strategy of the Company and the separate subfunds is to seek diversification through investment primarily in transferable securities.

The Board of Directors adheres to the Association of the Luxembourg Fund Industry ("ALFI") code of conduct for Luxembourg investment funds (revised June 2013). The code of conduct sets a framework of high-level principles and best practice recommendations for the governance of Luxembourg investment funds.

The Board considers that it has been in compliance with the Principles of the Code in all material respects for the year ended 30 September 2021.

The Board of Directors

Luxembourg, 2 December 2021

Investment Manager's Review

Global equity markets broadly rose over the period, with the UK, US and Europe all performing well. However, China was one of the weakest performers and fell over the period. Following the Covid-19 outbreak, and the subsequent lockdown restrictions and collapse of economic activity, markets began to recover as investors hoped that economies would return to some kind of normality.

Supportive monetary and fiscal policy was prevalent over the period. The US Federal Reserve (Fed) maintained the main US rate at near zero throughout the review period, while providing support through its bond-buying programme. Elsewhere, the European Central Bank (ECB) ramped up its original €1.35 trillion stimulus plan to €1.85 trillion in December 2020. The US Congress passed two additional stimulus packages during the period, cumulatively worth around US\$2.8 trillion. In August 2021, the US Senate passed the US\$1 trillion infrastructure deal.

Markets fell at the beginning of the period, reversing some recent gains. In November 2020, however, the relatively smooth US presidential election – coupled with news of three major Covid-19 vaccines – buoyed sentiment. This persisted through to the end of 2020 due to the launch of vaccination programmes, the approval of stimulus packages and the reaching of a Brexit trade deal.

Momentum stalled again in January and February 2021 as global bond markets experienced a marked sell-off, spurring worries that this could impact the fragile global recovery. This also negatively affected equities. However, equity markets resumed their upward momentum, driven by economic optimism, vaccine rollouts, continued accommodative monetary policy and a strong corporate reporting season. The MSCI World Index reached a record high in August but sold off in September, as concerns grew over inflation and interest rate hikes. Economic unease led to selling across the globe, although Japanese markets rose.

In fixed income, government bond prices fell over the 12 months. Lockdown restrictions heightened fears of a deep recession, with the 'risk-off' environment boosting government bond prices as investors fled to their perceived safety. However, rising optimism about vaccines and concerns that an economic recovery will fuel sharp rises in inflation led to a drop in government bond prices. They continued to fall later, as hawkish comments from the Federal Reserve, alongside inflation fears, triggered selling. Corporate bonds performed well, as stimulus measures and rising optimism helped bolster the market, although they later fell slightly as concerns about a withdrawal of central bank support increased.

Outlook

Company fundamentals remain supportive for equity markets, but with good news already priced in, returns are likely to be modest. Bond yields are expected to rise and this environment usually favours value shares, with cyclicals expected to outperform defensive companies. Despite this, growth companies are unlikely to fade materially as economic growth is weakening from supply chain pressures and higher energy prices. Chinese political risk has also resurfaced and is weighing on investor sentiment. Although the government's regulatory clampdown focused on technology companies, there is a risk it could broaden out. With commodity inflation and supply-side strains, there are likely to be individual pockets of earnings pressure for many businesses. Companies in Europe and the UK also face additional pressure from delivery driver and fuel shortages.

Within fixed income, increasing vaccine dissemination, the easing of restrictions and improving macroeconomic and corporate fundamentals are supporting economic activity and sentiment. Meanwhile, a key focus of investor attention is on whether rising inflation will be transitory or more long-lived. Evidence suggesting the latter would not be seen favourably.

November 2021

[†] Source: abrdn plc.

The ongoing charges figure (OCF) is the total expenses paid by each share class, against its average net asset value. This includes the annual management charge, the other operating expenses and any synthetic element to incorporate the ongoing charges of any underlying collective investments. The OCF can fluctuate as underlying costs change. Where underlying costs have changed, the OCF disclosed in the Key Investor Information Document will be updated to reflect current changes.

^{*} Operating, Administrative and Servicing Expenses (OASE) Gross Rate.

[△] Subscriptions and redemptions for this share class are in Euros.

Market review

Chinese equities rose through much of the period but gave back some gains in the third quarter of 2021. Healthy domestic economic data and the rapid recovery of corporate earnings initially supported share prices, as investors cheered the vaccine rollout globally and drove a rotation out of quality stocks that did well in the pandemic, into cyclical and undervalued sectors. However, as the 12 months progressed, expectations of tighter monetary policy to control inflation and excessive debt, new government regulations and a potential default at real-estate business Evergrande weighed on equity markets.

Throughout the period, the People's Bank of China stayed accommodative and prioritised consumption and investment over rising inflation. However, the tougher regulatory environment capped gains as Beijing stepped up scrutiny of its internet and education sector, alongside tightening of the real estate and banking. Meanwhile, the Chinese Communist Party marked the centennial of its founding on 1 July, where President Xi Jinping warned that it would not tolerate any sovereignty infringements. Elsewhere, US-China relations remained tense after the former banned imports of solar panels from China's Xinjiang province amid alleged human rights violations.

The final quarter of the period was turbulent, characterised by frenetic and unexpected regulatory intervention focusing on the tech sector, but later

spreading to other areas like media and entertainment, with threats of further regulatory action at one point wiping up to US\$500 billion off Chinese markets. This occurred as part of a broader government crackdown and determination to regain control of the economy and reduce the wealth gap to create 'common prosperity'. In September, the volatility and uncertainty triggered concerns about debt-ridden Evergrande, one of China's largest property developers. Swift action by China's central bank, the People's Bank of China (PBoC), averted a collapse of the property group on fears it would miss a scheduled debt repayment. The PBoC promised to protect consumers exposed to the property market.

Portfolio review

Stock selection in the consumer discretionary, health care and financials sectors drove returns. Conversely, consumer staples, real estate and industrials detracted.

Wuxi Biologics was a key contributor to returns after it lifted its 2021 forecast for sales and earnings, due to solid contributions from vaccines with nine either in development or production. The company also expanded its capacity by acquiring a biosimilar facility in Hangzhou from Pfizer. Other positives in the health care sector included Aier Eye Hospital, which continued to post rapid earnings growth on greater demand for eyecare due to work-from-home lifestyles.

The underweight to Alibaba supported returns as the e-commerce giant was weighed down by rules to root out monopolistic practices. Moreover, the overhaul to its fintech arm Ant Group following regulatory scrutiny may also hurt margins.

Leading lithium-ion battery separators maker, Yunnan Energy, contributed to relative performance. The company benefited from a supply shortage and raised its second-quarter earnings expectations, thanks to an increase in demand, continued capacity growth and operational efficiency.

Towards the end of the period, as part of its regulatory drive, the Chinese government ordered after-school tutoring companies to become non-profit businesses and not to accept foreign capital. As a result, our exposure to New Oriental Education and TAL Education performed poorly. We sold both positions in reaction to the major shift in the industry landscape. KE Holdings also lagged due to weaker sentiment within the property sector amid concerns about Evergrande contagion.

We added new positions that are positioned to benefit from China's drive for carbon neutrality included solar wafer giant Longi Green Energy and lithium-ion battery maker Contemporary Amperex. We also introduced pharmaceutical company Jiangsu Hengrui, AirPods

All China Equity Fund

Continued

assembler Luxshare Precision, and leading apparel brand name Li Ning. There were a couple of introductions that benefit from China's fast-growing healthcare industry. These include third-party biotech drug developer Zai Lab and online drugstore JD Health. Meanwhile, we introduced Hundsun Technologies and By-health. Both companies have clear competitive advantages, which we believe will enable them to defend their market leadership over the long term. We also purchased Shenzhen Inovance, a leader in China's industrial automation sector with a strong track record, competitive products, diversified revenue streams and cost advantage underpinned by effective supply chain management.

Against these, we exited Hangzhou Hikvision, Beijing Sinnet, Sunny Optical, ASM Pacific, Huazhu, Sands China, CSPC Pharmaceutical, Health & Happiness, CNOOC, Vitasoy and OneSmart.

Outlook

The regulatory measures imposed by the government came as a surprise. But we do believe that these changes should be seen in the context of a fast-changing technology landscape. Regulators are trying to keep pace with innovation, but a heavy-handed clampdown on all private new-economy sectors is unlikely. The new economy is a vital component of China's vision for a modern consumption-led economy. Further, the private sector retains a critical role in ensuring that the Chinese economy continues to innovate and prosper, and that Beijing reaches its goal of being a moderately prosperous nation by 2035. China still needs well-functioning capital markets to help propel growth.

We feel that the reaction to the measures was overdone and that the indiscriminate selling will create investment opportunities. Companies that can adapt to changing regulatory frameworks, and align with policy objectives such as digital innovation, green technology, access to affordable healthcare and improved welfare, have a bright outlook. Moreover, investors are likely to refocus on company-specific factors in the following result seasons, which should benefit our high-quality holdings.

American Focused Equity Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of American Focused Equity – A Accumulation shares increased by 28.17% compared to an increase of 32.65% in the benchmark, the S&P 500 TR Index (1 day lag).

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Benchmark return: Source: Lipper, Basis: close of business return, income reinvested, gross of expenses, USD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Major US equity market indices moved sharply higher amid periods of volatility over the 12-month period ended 30 September 2021, buoyed largely by investors' ongoing optimism regarding the distribution of Covid-19 vaccines and generally positive economic reports. Following strong performance for much of the third quarter, there was a sharp downturn in the US equity markets in September 2021, attributable to investors' concerns surrounding inflation, supply-chain challenges, and peak earnings growth. The rising number of Covid-19 cases drove increasing risk-off market sentiment and investors' rotation out of equities. All 11 sectors within the S&P 500 Index, a US large-cap market benchmark, garnered double-digit gains during the reporting period, led by energy – which climbed 83% – financial and communication services. The utilities, consumer staples and consumer discretionary sectors were the most notable market laggards.

The US Federal Reserve (Fed) maintained its benchmark interest rate in a range of 0.0–0.25% over the 12-month reporting period. However, the Federal Open Market Committee (FOMC) noted in its statement following its September 2021 meeting that "the path of the economy continues to depend on the course of the coronavirus. Progress on vaccinations will likely continue to reduce the effects of the public health crisis on the economy, but risks to the economic outlook remain." The FOMC also indicated that a reduction in its monthly purchases of US Treasury and agency mortgage-backed securities "may soon be warranted."

In economic news, US GDP grew in a range of 4.5% to 33.8% over the review period attributable to the ongoing recovery and reopening of the US economy. GDP increased at an annualised rate of 6.7% in the second quarter of 2021 – the most recent available data. The economic upturn was attributable mainly to increases in consumer spending, nonresidential fixed investment, exports, and state and local government spending.

According to the Department of Labor, US payrolls expanded by a total of 5.5 million over the 12-month period ended 30 September 2021, and the unemployment rate fell 3.0 percentage points to 4.8% – the lowest level since the onset of the Covid-19 pandemic in March 2020. Nonetheless, the employment totals remain about 4.9 million below the pre-pandemic peak level in February 2020. Inflation appears to be heating up amid supply-chain disruptions and upward pressure on wages. The US government reported that the Consumer Price Index (CPI) rose 5.4% year over year in September 2021. Energy costs skyrocketed nearly 25% over the 12-month period ended August 31, fueled mainly by a 42% increase in gasoline prices. The index for all items less food and energy was up 4.0% over the previous year.

Portfolio review

The Fund's performance versus the benchmark S&P 500 Index for the reporting period was hampered mainly by overall positioning in the information technology sector and stock selection in materials. The largest detractor from performance among individual holdings was Air Products and Chemicals. The supplier of industrial gases recorded notable increases in sales in all three geographical regions – the Americas, EMEA and Asia for the third quarter of its 2021 fiscal year. However, the company's results, as well as its EPS guidance for the fourth quarter, did not meet the market's expectations. Additionally, earlier in reporting period, the delay of a pending project acquisition and extension of a planned customer shutdown led to negative earnings revisions for the company. The market has become increasingly concerned that increased competition from companies such as Zoom and Microsoft will cause cloud-based business communications services provider RingCentral's revenue growth to decelerate. Additionally, Zoom's announced acquisition of cloud contact center software developer Five9 exacerbated these competitive concerns. (The deal subsequently was not completed.) Payment-processing services provider Fidelity National Information Services' results for the third quarter did not meet the market's expectations due to weakness in its Corporate and Other business segment. We subsequently exited the Fund's position in the company in the second quarter of 2021 following a period of share-price strength.

Overall positioning in the communication services and consumer staples sectors, along with stock selection in financials, bolstered Fund performance for the review period. The main individual stock contributor to performance was Goldman Sachs Group. The diversified financial services company saw healthy year-over-year revenue growth over the reporting period, buoyed mainly by notable strength in its Asset Management, Investment

Banking and Global Markets units. Investors viewed this as evidence that the new management team is on the path to improving shareholder returns over the medium term through various revenue and expense initiatives. Alphabet Inc. garnered robust year-over-year revenue increases over the review period. The corporate parent of Google benefited mainly from an upturn in consumer online activity and strong growth in its Google Search and Google advertising businesses. Clinical research organisation Icon plc reported significant increases in revenue and earnings for the second quarter of its 2021 fiscal year compared to the same period a year earlier. The company's results were bolstered by record net business wins and order backlog.

Outlook

Increasing uncertainty, coupled with increased expectations, drove choppy market conditions in the third quarter. Driving the volatility in the quarter were the persistent worries around the Covid-19 Delta variant and inflation, and a worsening picture of supply chains – all prompting a deceleration in the upward earnings trends we had seen for the year to date. Additionally, a potential property market crisis emerged in China (i.e., Evergrande), for which the global implications are not certain. The confluence of these issues within an expensive valuation context has led to a jittery market that is grappling with how to properly discount these risks into equity markets.

Consumer sentiment has come further off its highs, with the Conference Board Consumer Confidence Index® moving lower for the third consecutive month in September, although it remains relatively healthy when compared to pre-pandemic levels. This appears to be driven by the impact of the Delta variant in more severely affected states, on which the trajectory appears to be improving by late quarter. That is, for the first time in three months since the beginning of the Delta-induced surge, Covid-related hospitalizations and daily cases are declining in the aggregate nationwide. We feel that consumer financial health remains robust following a prolonged period of household debt paydown and increased savings through the pandemic. While short-term confidence appears to be dented by the recent wave of Delta variant cases, we believe that the current financial state of consumer balance sheets implies further spending and investment.

On the other side of the equation, robust demand was hampered in September by supply issues. Up until that time, corporate managements generally emphasised that increases in some input costs were being more than outweighed by strong operational gearing to volume growth as sales recover. In the past few weeks, however, we have seen that in several sectors (notably industrials,

materials, and consumer discretionary), supply-chain tightness has become extreme enough to prevent manufacturers and retailers from fulfilling customer orders. This has resulted in negative earnings preannouncements, which have halted the general trend of earnings upgrades seen thus far in 2021.

Nevertheless, we believe that sales growth should recover following the current transitory period. Beyond this phase – which has brought investor focus to the very near term, given the rapid fluctuations in supply chains – we anticipate that the market will shift its focus towards the sustainability of growth as the cycle normalises. Within this context, we continue to strive to create value for the Fund's shareholders by investing with conviction in companies that in our view have strong, sustainable business models and long runways for growth.

Market review

Global stock markets rose significantly over the past 12 months. Covid-19 was still the dominant factor at the beginning of the period, although stock markets had already begun their recovery from the lows of March 2020. Supportive monetary and fiscal policy was prevalent over the period.

Markets fell at the beginning of the period, reversing some recent gains. In November 2020, however, the relatively smooth US presidential election – coupled with news of three major Covid-19 vaccines – buoyed sentiment. This persisted through to the end of 2020 due to the launch of vaccination programmes, the approval of stimulus packages, and the reaching of a Brexit trade deal.

Momentum stalled again in January and February 2021 as global bond markets experienced a marked sell-off, spurred by worries of higher inflation. However, equity markets resumed their upward momentum, driven by economic optimism, vaccine rollouts, continued accommodative monetary policy and a strong corporate reporting season. After performing well during August, stock markets sold off in September, as concerns resurfaced over inflation and interest rate hikes.

Portfolio review

The Fund outperformed its benchmark over the 12 months under review.

At a stock level, the Fund benefitted from an overweight holding in integrated circuit manufacturer United Microelectronics. The company's share price made significant gains on the huge increase in demand for semiconductor chips. Additionally, an overweight position in Fubon Financial, an Asian-based diversified financial services firm, also added value. By contrast, having less than the benchmark weighting in Google parent company Alphabet weighed on returns. The business thrived during the pandemic, with earnings boosted by the uptake of digital advertising accelerating and the increased use of its cloud services – Google Cloud Platform (GCP).

Lastly, in terms of our style factors, value made a positive contribution with the Fund also benefitting from its exposure to momentum towards the end of the review period.

Outlook

Anecdotally, some of the supply bottlenecks emanating from manufacturing hubs in Asia are now easing. Some raw material cost pressures are also lessening. It is also noteworthy that China's manufacturing activity has experienced a small contraction. In the West, we await the effect on labour participation from the withdrawal of government support schemes. All of these factors suggest that supply chain pressure could start to moderate before year end. Overall, equity market performance may be tempered by gradual monetary policy normalisation and potentially higher taxation.

Market review

Equity markets in the Asia Pacific (excluding Japan) region rose over the 12 months. The period began positively, with sentiment supported by loose monetary policy, the outcome of the US election as well as vaccine breakthroughs and rollouts. This was despite coronavirus disruptions and rising geopolitical tensions amid worsening US-China ties. Subsequently, markets turned volatile on the back of surging bond yields, plus pandemic recovery concerns, albeit the losses did not outweigh the initial gains.

Chinese markets performed well for most of the period, driven by a rebound in the domestic economy, but have sold off in recent months. In July, the authorities unveiled stricter rules for the private education, internet and property sectors. This sparked a sell-off across Asia, as investors worried about potential regulation in other sectors. These concerns were compounded by contagion risk from troubled property developer Evergrande and power cuts that could further slow industrial activity.

More positively, India was the best performing market, due to higher commodity prices, improved vaccine access and the anticipated resulting pick-up in services activity. Australia benefited from rising commodity prices as well. Tech-heavy markets such as Taiwan and Korea

also posted solid gains, as the technology sector benefited from work from home demand, rising 5G smartphone penetration and a faster than expected recovery of auto and industrial demand.

Portfolio review

The Fund outperformed the benchmark over the 12 months, thanks mainly to stock picks in China.

In China, our underweight exposure to Alibaba benefited relative performance, with the Chinese government launching an anti-trust investigation into the company. We have been building the position in the stock on weakness, as we think it will adapt to regulatory changes thanks to its wide economic moat. However, we remain cautious in the near term, given ongoing government scrutiny, and will continue to monitor the risks.

Our exposure to the renewables space in China continues to perform well. Nari Technology shares rose, driven by the rising urgency for upgrades to the state grid in the wake of the recent power shortage and the policy push towards renewables. Yunnan Energy, a leading manufacturer of electric-vehicle (EV) battery separators, also performed well following a solid demand update from the company and capacity expansion by global battery makers. Another Chinese holding to fare well was Wuxi Biologics, as the pharmaceutical contract development and manufacturing organisation upgraded its forecast on the back of solid pandemic-related orders and market share gains.

These outweighed the weak performance from other mainland stocks. The regulatory crackdown has had an impact on Tencent, but we continue to have high conviction in the company. We anticipate new regulation will necessitate changes to current business practices, but believe Tencent will remain the dominant player in what is still a highly attractive long-term growth sector. Ping An Insurance also lagged, due to concerns about its China property investment exposure. In Hong Kong, Sands China fell as investors fretted over the potential introduction of more regulation, and Budweiser Brewing APAC delivered disappointing results due to the challenging operating conditions in South Korea and renewed Covid-19 outbreaks in China.

Elsewhere across the region, a rosy market outlook for semiconductor chips lifted both Samsung Electronics in South Korea and Taiwan Semiconductor Manufacturing Co, as well as our non-benchmark position in Dutch semiconductor equipment-maker ASML Holdings. In India, leading mortgage-finance company HDFC reported resilient results despite tough operating conditions.

Asia Pacific Equity Fund

Continued

In Australia, not holding Commonwealth Bank of Australia weighed on the Fund's performance. Our holding in blood-plasma products supplier CSL dented performance too, as the stock took a breather after a long period of outperformance.

In key portfolio changes, we indicated in the first-half review that we capitalised on market volatility to introduce companies with structural growth drivers and good fundamentals. We continued in a similar vein in the second half, given the attractive opportunities arising from the market tumult.

Most of the Fund's purchases were in China, where we exited the position in the Aberdeen China A Share Fund and opted for direct holdings. We focused on companies that are aligned with policy objectives like digital innovation, green technology, access to affordable healthcare and improved welfare. These new positions included China Merchants Bank, the highest-quality lender in the China A-share market; Shenzhen Mindray Bio-Medical Electronics, the country's largest medical equipment maker; Shenzhen Inovance, a high-quality player within the automation sector; Shenzhou International, which manufactures apparel for global brands such as Nike, Adidas, Uniqlo and Puma; and Sungrow, a leading global supplier of inverters, an essential component of solar projects.

We are also finding opportunities outside China. We bought Hon Hai Precision Industry, Apple's main iPhone supplier, and Korean internet company Kakao Corp. We expect Hon Hai's margins to expand, driven by better pricing and growing shipments, and Kakao Corp to benefit from the trend of consumers moving online. Another addition was Taiwan's Delta Electronics, which manufactures power systems for a variety of industries. We are upbeat about its prospects, which are underpinned by exposure to various growth drivers, such as 5G, data centres and the rising adoption of electric vehicles.

Against this, we exited CapitaLand, JD Health, KE Holdings, Meituan, New Oriental Education, Shanghai International Airport, Singtel and Swire Properties.

Outlook

Despite renewed outbreaks of Covid-19, regulatory pressures, particularly in China, and niggling worries over inflation and rising rates, we see reasons to be optimistic about Asian equities. While regulatory risks persist in China, we believe the authorities want to strike a good balance between promoting innovation and achieving its political goals. In particular, we prefer high-quality companies that have strong links to domestic consumption. Being in line with the strategic aims of Chinese authorities, the sector should be better positioned to withstand regulatory headwinds, and therefore continue to prosper.

Meanwhile, US-China geopolitical tensions will continue to drive China's push for self-sufficiency, which in turn presents investment opportunities, whether in the domestic consumption sector, tech, or green energy. We continue to position our portfolio around structural growth themes such as these that will weather the near-term uncertainties.

Lastly, despite coronavirus-related disruptions, corporate earnings growth remains likely to rebound this year, led in particular by the robust tech hardware sector. Vaccination rates are now accelerating across the region and should gradually lead to easing restrictions and further economic reopening. This would help mitigate inflationary pressures tied to near-term supply chain bottlenecks. As stock-pickers, we remain focused on companies with pricing power and the ability to pass through cost pressures.

Market review

Asian risk assets rose over the 12 months, with stocks outpacing bonds. Stocks advanced through the last quarter of 2020, buoyed by the start of vaccine rollouts and Joe Biden's presidential election victory in the US. Later in July, however, Chinese markets, which had performed well for most of the period, fell sharply after the authorities unveiled stricter rules for the private education, internet and property sectors. This sparked a broader market sell-off throughout the region as investors fretted about potential regulations in other sectors, erasing earlier gains. Still, positive corporate earnings and hopes around economic reopening on the back of vaccine rollouts underpinned share prices.

Asian fixed income also delivered positive total return over the period. Gains, however, were blunted by rising regional yields that tracked the US Treasuries higher. Local-currency government bonds outperformed Asian credit, with Indonesian debt a standout performer on the back of lower yields as its high infection rate dampened investor risk appetite. In the credit segment, while spreads tightened steadily in the first half of the period, rising defaults and China's heightened regulatory activity sparked significant widening from July. In particular, the new debt-ratio caps for developers introduced in 2020 triggered several defaults, including China Fortune Land,

in early 2021. As of end-September, Evergrande, one of the country's largest developers, had missed making interest payments for two offshore bond issues, which was largely priced in by the market. Investment-grade bonds fared better than high-yield debt as a result.

Portfolio review

The portfolio outperformed the benchmark during the review period. All strategies including tactical asset allocation, Asia fixed income, closed-end fund and active equity contributed to return. On the other hand, quantitative equity strategy underperformed on the back of negative security selection.

In the last quarter of 2020, we increased our overweight equity exposure prior to the US presidential election; we believed that the sell-off in October, which was led by US markets, was overdone. We also rotated our equity exposure away from defensive sectors and regions to cyclical ones, given positive vaccine developments. These moves helped to capture the global year-end equity rally. At the start of 2021, we gradually reduced the portfolio's bond duration given our expectations of higher inflation and yield. We also adjusted our equity exposure: switching out of markets that had done well such as emerging Asia, Japan and Indonesia, to laggards that still appear undervalued with a positive outlook, such as UK and global mining equities. Moving into the second and third quarter of 2021, we remained moderately overweight to equity and underweight to government bonds. As the global economy entered the mid-cycle transition phase, we reduced the portfolio's heavy cyclical tilt for a more balanced allocation between cyclical sectors (such as industrial, financial, mining) and those that would benefit from structural growth (such as future mobility, global healthcare). We also further trimmed our exposure to developed-markets duration in early August when the US Treasury bond yield showed signs of bottoming on the back of strong macroeconomic data and a hawkish Federal Reserve. Lastly, on the currency front, we turned overweight to the US dollar and also added a few diversifying forex carry trades, taking long positions in the Indian rupee and yuan, against the Taiwan dollar and Thai baht.

In the equity portion, while rising valuations limited our opportunities, we took advantage of market volatility to introduce companies that enjoy structural growth drivers and have good fundamentals. We bought Hon Hai Precision Industry, Apple's main iPhone supplier, and Korean internet company Kakao Corp. We expect Hon Hai's margins to expand, driven by better pricing and growing shipments, and Kakao Corp to benefit from the trend of consumers moving online. The latter has a suite of offerings built around its flagship messaging platform

Asia Pacific Multi Asset Fund

Continued

KakaoTalk, which include leisure, gaming, commerce and financial services. It has a dominant brand, nimble innovation and a professional management team with a good track record. In China, we also invested in textile manufacturer Shenzhou International, which manufactures apparel for global brands such as Nike, Adidas, Uniqlo and Puma. It is vertically integrated, starting from fabric research and development, with a good track record of efficient execution. Against these, we sold Bank of the Philippine Islands, City Developments, ITC, JD Health, New Oriental Education, Sands China and Singtel, for better opportunities elsewhere.

In the fixed income segment, we nearly halved our exposure to Philippine corporates as their valuations became less attractive following a solid rally. Similarly, our exposure to Middle East also fell as we took profits. In China, we increased exposure to investment-grade credit including Huarong following its sell-off. As its bonds recovered, we subsequently took profits and pared the position. We also added positions in quality Chinese high-yield names outside of the real estate sector, as well as trimmed Chinese subordinated bonds in favour of those from other regions. Our exposure to Chinese real estate fluctuated through the year due to the aforementioned volatility in the sector.

Outlook

Looking forward, our base case scenario remains for several years of above-trend global growth as economies open up more fully and fiscal and monetary stimulus remain in place. Near-term demand strength amid an array of supply bottlenecks is generating a period of higher inflation. Although we expect this aggregate inflationary impulse to be largely transitory, there will be meaningful divergences across countries and sectors. Moreover, medium-term inflation risks are skewed to the upside, albeit modestly.

We are monitoring the surge in energy price, driven by green energy policies, supply constraints due to the pandemic, and geopolitical developments. While markets will reprice for higher energy costs, we believe that equity markets can function well even at higher oil prices.

We are optimistic on equities as the Covid-19 delta wave rolls over. The relative outlook for each region and style remains highly uncertain, and the future trajectory of relative performance depends largely on how yields move. In the near term, the combination of reopening, higher yields and inflation, as well as rising oil prices should all support a rotation towards cyclicals. Once concerns on China growth and its property sector moderate, we see value in Asia stocks, with earnings growth there outpacing that of other regions.

Should there be a more significant pullback that is unwarranted, we would likely take the opportunity to increase the portfolio's cyclical exposures. This is on the back of our view that energy issues will intensify and that inflation and bond yields will rise, and also given the broad market underweight positioning in value and cyclical stocks. Our highest conviction ideas remain equities, industrials, financials, green metals, and healthcare.

Among global credit markets, Asia is unique with regard to the amount of distress currently reflected in valuations. Extreme risk aversion is reflected in valuations; China single-B spreads are in excess of 2500bps over US Treasuries, implying a default rate of over 40%. Valuations reflect risk and uncertainty, but it is rare to see this much downside priced into credit. We are also now seeing some adjustment in terms of the policy stance to the sector at both the national and local level, though we do not expect a return to a reflationary stance or any large bailouts for the sector. Volatility will remain elevated, but with many builders now pricing in default, we see risk-reward as favourable.

Asian Bond Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of Asian Bond – A Accumulation Shares increased by 3.56% compared to an increase of 1.36% in the benchmark, the Markit iBoxx ALBI Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Benchmark return: Source: RIMES, Basis: close of business return, income reinvested, gross of expenses, USD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

The year under review was marked by improving economic data, recovering global growth and the rollout of Covid-19 vaccines. In the US, Joe Biden's victory over incumbent US president Donald Trump, and subsequent infrastructure and Covid-19 stimulus packages, added to the positive mood. The European Union also provided pandemic relief programmes to support their beleaguered economies. Subsequently, as more economies reopened, rising demand and supply chain bottlenecks pushed crude oil and commodity prices higher. The tech sector also faced shortages in chip production. All these drove inflationary concerns. By the middle of the year, the Federal Reserve turned hawkish and signalled that it would slow its bond-buying programme. Officials also hinted towards a potential interest rate hike, but not before 2023. As a result, US treasury long-term bond yields rose considerably. The 10-year yields were higher by 80 basis points (bps). The short-end outperformed, with 2-year yields rising by 14.8bps as the Fed remained accommodative despite a hawkish tilt.

Most Asian local-currency bond yields were volatile, but finished the review period higher, in line with the US Treasuries. Asian economies rebounded as the Covid-19 situation improved across most countries. Global growth also supported exports in the region. Subsequently, central banks, mainly in China, India and Korea began normalising monetary policies amid rising inflation, sparked by an overheated property sector in China and tech-fuelled growth momentum in Korea. Notably, South Korea raised interest rates in August. Conversely, Bank Indonesia cut interest rates by another 50bps during the period, with the last in February, while the Philippine central bank reduced rates by 25bps in November to support their respective economies. However, around the second quarter of 2021, a second wave of infections hit several countries, with devastating consequences in India and Indonesia. As economies resorted to targeted mobility

restrictions, economic data deteriorated. Not surprisingly, the short-end of the curve outperformed as authorities stayed accommodative, while inflationary concerns and inoculation efforts hurt the longer-end. 10-year yields across South Korea, Singapore, Malaysia, Thailand, India and the Philippines rose by 81bps, 72bps, 71bps, 54bps, 20bps and 163bps respectively.

On the other hand, China and Indonesia bucked the trend. In China, the economy slowed down as authorities imposed mobility restrictions due to the rising Covid-19 infections in several parts of the country. Additionally, concerns over real-estate developer Evergrande Group's debt crisis also kept investors jittery. The central bank cut the reserve requirement ratio (RRR) and injected liquidity to calm the market. In Indonesia, the central bank remained accommodative and provided additional support to affected sectors as low rates of vaccination and the second outbreak dampened investor sentiment, which drove yields lower.

Asian currencies were mixed. The Chinese yuan, Taiwanese dollar and the Indonesian rupiah gained against the US dollar by 5.4% and 4.3% and 4% respectively. Higher exports and economic recovery hopes supported the yuan, with China the first economy to rebound after Covid-19. This was despite a resurgence of infections later in the year. Similarly, a rebound in global trade boosted the Indonesia rupiah, Taiwanese dollar and the South Korean won. However, the won was volatile through the year and lost significant ground in the last quarter of the review period as the central bank's tightening resulted in foreign capital outflows. It finished the year 1.2% lower against the US dollar. Elsewhere, the Thai baht weakened by 6.4% followed by the Philippines peso, which fell by 4.9% amid macroeconomic weakness and a slower rollout of vaccines.

Asian credit inched higher over the year, with investment-grade outperforming high-yield. Spreads tightened steadily in the first half, but widened significantly from July amid rising defaults and heightened regulatory activity in China.

China dominated news flow for most of the period. Initially, troubled bad-debt manager Huarong captured headlines, as its substantial losses resulted in delayed financial reporting and a capital shortfall. Its bond price fell to around 50 cents on the dollar, but eventually recovered after a state-backed bailout was announced. Later, in mid-2021, Beijing unveiled new regulations in the private education and technology sectors as it shifted towards a policy goal of "common prosperity". Regulators had already tightened their stance towards the property sector earlier to reduce financial system risk. The new debt-ratio caps for developers introduced in 2019 triggered

Asian Bond Fund

Continued

several defaults. As of end-September, Evergrande, one of the country's largest developers, missed making interest payments for two offshore bond issues, which was largely priced in by the market. Other smaller developers, including Fantasia and Modern Land, also missed payments on their bonds. At the time of writing, regulators were beginning to signal some moderation in their policy stance, as seen in greater mortgage availability and local policy easing, and greater involvement in Evergrande's restructuring process. Their focus appeared to be on keeping Evergrande as a going concern so that it could deliver finished units to customers and pay its vendors. We see little risk for systemic financial contagion from an Evergrande default domestically, as well as between China and global financial markets. However, we believe there are building risks to China's growth as more developers get ensnared in the growing confidence crisis.

Portfolio review

The Fund delivered a healthy return of 4.87% on absolute gross terms, surpassing its benchmark's returns by 356 bps. All strategies, namely, local-currency bonds, off-benchmark exposure to US dollar-denominated Asian credit and currencies contributed to absolute and relative performance.

Local currency bonds added handsomely to performance during the year. On an absolute basis, it returned 4.84%, driven by country and currency allocations, and sector allocations. Relative outperformance of the Fund against the benchmark, peer group and other global and emerging market rates strategies, benefitted from our active duration management, using short-duration strategies and US Treasury futures to ensure that the Fund was as much as 3-years short-duration versus the index. In rates, higher conviction and allocation to Chinese, Indian and Indonesian local rates, which outperformed and delivered positive returns over the period, with preferences towards the more idiosyncratically driven markets, helped. Similarly, our underweight or lack of exposures to markets with high correlation to global rates and US Treasuries such as Hong Kong, Singapore, South Korea, the Philippines and Thailand also contributed significantly to relative performance as yields rose significantly across these markets.

Currency strategy had to be more flexible given fluctuations in market conditions over the period, while adopting more non-consensus position drove outperformance. We positioned with non-consensus short-dollar risk versus the benchmark through the second half of 2020 and long-dollar risk at the start of 2021 relative to the benchmark, which helped avoid the selloff in emerging markets and Asia currencies in March.

We maintained a more cautious and tactical approach to currencies for the rest of the period, with a bias towards more idiosyncratically driven currencies such as the yuan and Indian rupee.

Off-benchmark allocations to Asian US dollar credit risk, particularly driven by Philippine corporates, higher-rated quasi-sovereigns and the Middle East contributed to absolute and relative performance, as they outperformed the core Asian local currency bond markets that we used to fund these positions, though exposure to Chinese credit pared returns towards the latter part of the period.

Outlook

Asia has seen far more resilient performance than global rates and broader emerging local-currency markets, reflecting its robust fundamentals, stable politics and prudent approach to policy even as the region and world face some risks emanating from China. That said, several countries have and continue to deliver strong performance including China. Bonds are expected to remain supported by the weaker growth backdrop while retaining attractive valuations, while the currency will be supported by its resilient balance of payments. Indonesia and India have also seen robust performances. In Indonesia, total returns were more than 15% over the year, thanks to the recent reforms that enabled policymakers to successfully steer the economy and market through the crisis.

While these markets continue to remain attractive allocations, we see value emerging elsewhere as well. As policymakers adjust to the higher inflation risk, which may be more acute than previously anticipated, pressure and risk on rates have increased. In Asia, some markets, namely South Korea, reacted swiftly with policy normalisation. As such, 2-year yields in South Korea, which were less than 40bps above policy rates at the start of the year, are now around 110bps above, the widest margin since 2011. This has allowed for value to emerge in countries such as South Korea. While the Fund avoided exposure to them through this correction, particularly with the yield curve retaining relatively steep slopes, we begin to see opportunities to allocate back to these markets, as well as in Malaysia and Singapore.

Risks remain but markets have been pricing these more aggressively in recent months. Encouragingly even markets at the forefront of some of the main risks have been consolidating. In equities, the tech sector in China for example has been consolidating since August. The Asian high-yield market is at the initial stages of consolidating since mid-October. While we tactically hedged Indian rupee risk over September and into October on the back of valuations and oil risks, sensitivity to elevated oil has

Asian Bond Fund

Continued

diminished following its correction and those hedges have been unwound. Meanwhile, Covid-19, which was the biggest driver of risk for Asia at the start of the year, has faded significantly as more economies made progress on vaccines and reopen alongside a global recovery. Indeed, the October leading indicators of most countries are over the 50 expansionary levels, even as China faces some of its home-grown headwinds.

Yet another risk is the policy tightening in China. There is a need to address excessive debt levels and moral hazard in the economy and indeed a more sustainable future would be aided by keeping policies tight for some more time. That said, while it is a difficult line to tread, we do expect policymakers to provide sufficient support to the economy and while substantial easing or stimulus is unlikely, there is a greater possibility that some of the China-centric risks begin to ease heading into 2022. Amid the China-centric risks, weakness in mainland economic data, pressures on oil and commodity prices, energy shortages in China and Europe, and of course uncertainty concerning global monetary policy, year-end sentiment will remain fragile. However, it is in the often fragile sentiment and bias for overreacting to risk that we have found and expect to continue to find value across Asian markets, albeit exercising caution and discipline.

Overall, the Asian Bond Fund will retain an aggressive short duration position to protect against interest rates volatility and a bias for higher yields in the medium term, though will look for opportunities in a broader set of markets to fade some of the rates moves seen.

Among global credit markets, Asia is unique given the amount of distress currently reflected in valuations. In particular, spreads for high-yield Chinese property developers are now severely dislocated. A tighter top-down policy and stricter lending conditions have resulted in a confidence crisis for the sector. Several smaller developers have defaulted and Evergrande remains on the verge of defaulting. Extreme risk aversion is reflected in valuations; China single-B spreads are in excess of 2,500bps over US Treasuries which implies a default rate of over 40%. Valuations are reflective of risk and uncertainty, but it is rare to see this much downside priced into credit. We are also now seeing a degree of adjustment in terms of the policy stance to the sector at both national and local levels. We do not expect a return to a reflationary stance or any large bailouts for the sector. Volatility will remain elevated, but with many builders now pricing in default, we see risk-reward as favourable.

Asian Credit Bond Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of the Asian Credit Bond – A Accumulation shares increased by 1.61% compared to an increase of 1.96% in the benchmark, the JP Morgan JACI Diversified TR Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Benchmark return: Source: JP Morgan, Basis: close of business return, income reinvested, gross of expenses, USD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Asian credit inched higher over the year in review, with investment-grade outperforming high-yield. Spreads tightened steadily in the first half of the period, buoyed by the start of vaccine rollouts and Joe Biden's presidential election victory in the US, but widened significantly from July amid rising defaults and heightened regulatory activity in China. Treasury yields also rose over the period. The US Federal Reserve signalled that it could start tapering asset purchases in November, with many of its members supporting a rate hike in 2022.

China dominated news flow for most of the period. Initially, troubled bad-debt manager Huarong captured headlines, as its substantial losses resulted in delayed financial reporting and a capital shortfall. Its bond prices fell to around 50 cents on the dollar, but eventually recovered after a state-backed bailout was announced. Later, in mid-2021, Beijing unveiled new regulations in the private education and technology sectors as it shifted towards a policy goal of "common prosperity".

Regulators had already tightened their stance towards the property sector earlier, to reduce financial system risk. The new debt-ratio caps for developers introduced in 2020 triggered several defaults, including China Fortune Land, in early 2021. As of end-September, Evergrande, one of the country's largest developers, had missed making interest payments for two offshore bond issues, which was largely priced in by the market. Other small developers, including Fantasia and Modern Land, had also missed payments on their bonds. At the time of writing, regulators were beginning to signal some moderation in their policy stance, as seen in greater mortgage availability and local policy easing, and becoming more involved in Evergrande's restructuring process. Their focus appeared to be on keeping Evergrande as a going concern so that it could deliver finished units to customers and pay its vendors.

We see little risk for systemic financial contagion domestically from an Evergrande default, as well as between China and global financial markets. However, we also believe there are building risks to China's growth as more developers get ensnared in the growing confidence crisis.

Portfolio review

Our exposure to the Middle East contributed the most to performance. Additionally, our allocation to sub financials, higher-rated quasi-sovereigns and Philippine corporates lifted returns too. Conversely, detracting from performance were our overweight to Chinese real estate and stock selection in Indonesia.

In portfolio activity, over the period, we nearly halved our exposure to Philippine corporates as their valuations became less attractive following a solid rally. Similarly, our exposure to the Middle East also fell as we took profits. In China, we increased exposure to investment-grade credit, including Huarong following its sell-off. As its bonds recovered, we subsequently pared our position. Our exposure to Chinese real estate fluctuated through the year; our overweight bias to the sector resulted in the negative performance previously noted.

Outlook

Among global credit markets, Asia is unique with regard to the amount of distress currently reflected in valuations. In particular, spreads for high-yield Chinese property developers are now severely dislocated. A tighter top-down policy and stricter lending conditions have resulted in a confidence crisis for the sector. Several smaller developers have defaulted and Evergrande, one of the largest developers on the mainland, is on the verge of defaulting as at the time of writing. Extreme risk aversion is reflected in valuations; China single-B spreads are in excess of 2500bps over US Treasuries, implying a default rate of over 40%. Valuations reflect risk and uncertainty, but it is rare to see this much downside priced into credit. We are also now seeing some adjustment in terms of the policy stance to the sector at both the national and local level, though we do not expect a return to a reflationary stance or any large bailouts for the sector. Volatility will remain elevated, but with many builders now pricing in default, we see risk-reward as favourable.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

The year under review was marked by improving economic data, recovering global growth and the rollout of Covid-19 vaccines. In the US, Joe Biden's victory over incumbent US president Donald Trump, and subsequent infrastructure and Covid-19 stimulus packages, added to the positive mood. The European Union also provided pandemic relief programmes to support their beleaguered economies. Subsequently, as more economies reopened, rising demand and supply chain bottlenecks pushed crude oil and commodity prices higher. The tech sector also faced shortages in chip production. All these drove inflationary concerns. By the middle of the year, the Federal Reserve (Fed) turned hawkish and signalled that it would slow its bond-buying programme. Officials also hinted towards a potential interest rate hike, but not before 2023. As a result, US treasury long-term bond yields rose considerably. The 10-year yields were higher by 80 basis points (bps). The short-end outperformed, with 2-year yields rising by 14.8bps as the Fed remained accommodative despite a hawkish tilt.

Most Asian local-currency bond yields were volatile, but finished the review period higher, in line with the US Treasuries. Asian economies rebounded as the Covid-19 situation improved across most countries. Global growth also supported exports in the region. Subsequently, central banks, mainly in China, India and Korea began normalising monetary policies amid rising inflation, sparked by an overheated property sector in China and tech-fuelled growth momentum in Korea. Notably, South Korea raised interest rates in August. Conversely, Bank Indonesia cut interest rates by another 50bps during the period, with the last in February, while the Philippine central bank reduced rates by 25bps in November to support their respective economies. However, around the second quarter of 2021, a second wave of infections hit several countries, with devastating consequences in India and

Indonesia. As economies resorted to targeted mobility restrictions, economic data deteriorated. Not surprisingly, the short-end of the curve outperformed as authorities stayed accommodative, while inflationary concerns and inoculation efforts hurt the longer-end.

On the other hand, China and Indonesia bucked the trend. In China, the economy slowed down as authorities imposed mobility restrictions due to the rising Covid-19 infections in several parts of the country. Additionally, concerns over real-estate developer Evergrande Group's debt crisis also kept investors jittery. The central bank cut the reserve requirement ratio (RRR) and injected liquidity to calm the market. In Indonesia, the central bank remained accommodative and provided additional support to affected sectors as low rates of vaccination and the second outbreak dampened investor sentiment, which drove yields lower.

Asian currencies were mixed. The Chinese yuan, Taiwanese dollar and the Indonesian rupiah gained against the US dollar by 5.4%, 4.3% and 4% respectively. Higher exports and economic recovery hopes supported the yuan, with China the first economy to rebound after Covid-19. This was despite a resurgence of infections later in the year. Similarly, a rebound in global trade boosted the Indonesia rupiah, Taiwanese dollar and the South Korean won. However, the won was volatile through the year and lost significant ground in the last quarter of the review period as the central bank's tightening resulted in foreign capital outflows. It finished the year 1.2% lower against the US dollar. Elsewhere, the Thai baht weakened by 6.4% followed by the Philippines peso, which fell by 4.9% amid macroeconomic weakness and a slower rollout of vaccines.

Portfolio review

The Fund outperformed the benchmark on a gross basis, however returns were supported by a one-off payment in December 2020 that resulted in a price increase of 4.82% which was related to a tax reclaim on prior Korean investments. Nevertheless, discounting this impact, the Fund outperformed the benchmark.

With respect to interest rate strategy, higher conviction and allocation to Chinese, Indian and Indonesian local rates, with preferences for idiosyncratically driven markets, helped. In particular, Indonesia delivered surprisingly strong performance, shrugging off the typical risk sensitivities seen in this market, in part supported by policy support to the market. Similarly, our underweight or lack of exposures to markets with high correlation to global rates and US Treasuries such as Hong Kong, Singapore, the Philippines and Thailand aided relative performance given the very low level of yields at the short end of their

Asian Local Currency Short Term Bond Fund

Continued

respective curves and the beginning of the pricing in of policy normalisation across most of these markets.

Currency strategy had to be more flexible given fluctuations in market conditions over the period, while adopting more non-consensus position drove outperformance. We positioned with non-consensus short-dollar risk versus the benchmark through the second half of 2020 and long-dollar risk at the start of 2021 relative to the benchmark, which helped avoid the selloff in emerging markets and Asia currencies in March. We maintained a more cautious and tactical approach to currencies for the rest of the period, with a bias towards more idiosyncratically driven currencies such as the yuan and Indian rupee.

Outlook

Asia has seen far more resilient performance than global rates and broader emerging local-currency markets, reflecting its robust fundamentals, stable politics and prudent approach to policy even as the region and world face some risks emanating from China. That said, several countries have and continue to deliver strong performance including China. Bonds are expected to remain supported by the weaker growth backdrop while retaining attractive valuations, while the currency will be supported by its resilient balance of payments. Indonesia and India have also seen robust performances. In Indonesia, returns were exceptionally strong, thanks to the recent reforms that enabled policymakers to successfully steer the economy and market through the crisis.

While these markets continue to remain attractive allocations, we see value emerging elsewhere as well. As policymakers adjust to the higher inflation risk, which may be more acute than previously anticipated, pressure and risk on rates have increased. In Asia, some markets, namely South Korea, reacted swiftly with policy normalisation. As such, 2-year yields in South Korea, which were less than 40bps above policy rates at the start of the year, are now around 110bps above, the widest margin since 2011. This has allowed for better value to emerge in countries such as South Korea. Risks remain but markets have been pricing these more aggressively in recent months. Encouragingly even markets at the forefront of some of the main risks have been consolidating. In equities, the tech sector in China for example has been consolidating since August. The Asian high-yield market is at the initial stages of consolidating since mid-October. While we tactically hedged Indian rupee risk over September and into October on the back of valuations and oil risks, sensitivity to elevated oil has diminished following its correction and those hedges have been

unwound. Meanwhile, Covid-19, which was the biggest driver of risk for Asia at the start of the year, has faded significantly as more economies made progress on vaccines and reopen alongside a global recovery. Indeed, the October leading indicators of most countries are over the 50 expansionary levels, even as China faces some of its home-grown headwinds.

Yet another risk is the policy tightening in China. There is a need to address excessive debt levels and moral hazards in the economy and indeed a more sustainable future would be aided by keeping policies tight for some more time. That said, while it is a difficult line to tread, we do expect policymakers to provide sufficient support to the economy and while substantial easing or stimulus is unlikely, there is a greater possibility that some of the China-centric risks begin to ease heading into 2022. Amid the China-centric risks, weakness in mainland economic data, pressures on oil and commodity prices, energy shortages in China and Europe, and of course uncertainty concerning global monetary policy, year-end sentiment will remain fragile. However, it is in the often fragile sentiment and bias for overreacting to risk that we have found and expect to continue to find value across Asian markets, albeit exercising caution and discipline.

Market review

Asian property stocks rose over the 12 months. Regional markets advanced through the last quarter of 2020, buoyed by the start of vaccine rollouts and Joe Biden's presidential election victory in the US. However, rising bond yields capped gains. Chinese markets, which had performed well for most of the period, also fell sharply in July after the authorities unveiled stricter rules for the property sector, along with private education and internet companies. This sparked a broader market sell-off throughout the region, as investors fretted about potential regulations in other sectors.

Property shares lagged the broader regional market, despite benefitting from investors' rotation into cyclical stocks during certain periods. In China, policymakers took steps to curb rampant speculation in the housing market, including imposing new debt-ratio caps for developers. Later in the period, developer China Evergrande's debt woes sparked a confidence crisis in the sector. Stresses mounted, with monthly sales data in September 2021 – usually a peak season – significantly lower from a year ago. Authorities elsewhere, such as Taiwan and New Zealand, also sought to curb speculation in their real estate markets which had been fuelled by record-low borrowing costs.

Portfolio review

The Fund was closed and its holdings liquidated by 8 June 2021.

Market review

Asian small-cap equities rose in the period under review and outpaced their larger counterparts. Stocks advanced through the last quarter of 2020, buoyed by the start of vaccine rollouts and Joe Biden's presidential election victory in the US. Positive corporate earnings and hopes around economies reopening amid vaccine rollouts also underpinned share price gains.

By country, India and Indonesia topped the leaderboard on the back of improved vaccine access and the ensuing pick-up in services activity, along with higher commodity prices. In China, the regulatory crackdown on private education, internet and property sectors in mid-2021 were a drag on markets, but left small-cap stocks unscathed. As a result, Chinese small caps still clocked healthy gains over the period.

Portfolio review

The Fund lagged the benchmark. This was mainly due to weak stock selection in China, but our non-benchmark exposure to the Netherlands and positive stock selection in Taiwan helped cushion the losses.

On the mainland, software and services holdings Beijing Sinnet and Venustech lagged on weaker-than-expected results, which were partly due to a Covid-19-induced delay in their project deliveries. Property developer KWG

Group was hurt by the pessimistic industry sentiment given the debt woes of larger peer Evergrande.

Elsewhere in South Korea, enterprise software firm Douzone Bizon lagged too, despite posting decent full-year results. Our lack of exposure to the cyclical shipping sector, including Korea's HMM, dented returns further as freight rates rose. We prefer value names with well-invested assets that benefit from scarcity value, such as Asian Terminals. Cushioning the losses was Hansol Chemical, a leading chemical product supplier, which rallied after the company announced that it would expand offerings in electric-vehicle battery chemicals.

In Southeast Asia, our holding in Malaysia's Shangri-La Hotels hurt performance given the impact of lockdowns worldwide on the travel sector. Indonesian lender Bank OCBC Nisp was weak as its earnings recovery trailed its peers, though there were some signs of improvement in the second quarter. Poor liquidity remained an issue for the stock as well. In the Philippines, the share-price of real estate firm Cebu Holdings was hampered by the fortunes of parent Ayala Land, given the earlier announcement of a merger of the two businesses.

Conversely, the Fund's overweight to semiconductor-related segments supported returns. Dutch semiconductor equipment maker ASM International continued to climb on better-than-expected results. The company also forecast new revenue and margin figures for the next five years, providing robust earnings visibility. IT hardware components manufacturers such as Silergy and Globalwafers enjoyed continued demand growth from growing foundry capacity as well as technology migration, supported by good visibility in end-markets such as auto, 5G and Internet of Things. Meanwhile, weakening sentiment in memory chip pricing and supply-demand dynamics led to a share price correction for Wonik IPS. The semiconductor processing equipment company, however, continued to build market share across its customer base, including global memory leaders. In the wider tech sector, Taiwan-based online retailer Momo.com saw good growth due to structural changes in consumer spending behaviour. Our IT services businesses were also among the key contributors to relative performance. FPT Corp in Vietnam and Mphasis in India benefited from rising client demand for outsourcing and cloud migration.

Elsewhere, our holding in Vietnamese lender Techcombank was a key contributor too, amid solid results and an improving macro outlook.

On the portfolio front, rising valuations limited our opportunities but we took advantage of market volatility to introduce more companies, aside from those mentioned in the interim report, that are latched on to structural growth drivers and have good fundamentals.

Asian Smaller Companies Fund

Continued

Five were in China, and across various sectors.

Ever Sunshine is a Shanghai-based property management company with a credible parent, Chinese developer CIFI. Its key competitive advantage lies in its proven strength in bidding for third-party contracts, where brand, reputation and a solid track record are important. In the healthcare sector, we added Amoy Diagnostics, which offers molecular diagnostic testing that is used to assess whether a patient is suitable for certain therapies, mainly in oncology treatment. Demand in this specialised area of companion diagnostics reagents and testing services is rising, driven by the increasing use of targeted therapies. In the consumer sector, we bought Chacha Food, a leading domestic nut producer with well-established brands, including the largest roasted seeds brand locally. We see high growth potential for Chacha, as the highly fragmented industry presents a consolidation opportunity for a focused, vertically integrated player with a solid brand portfolio. We also invested in Yantai China Pet Foods, a mainland pet-food manufacturer with established credentials and a diversified customer base of global brands. The company is looking to build its own local brand to tap rising pet ownership and demand for premium products domestically. Lastly, Estun Automation is a leading automation and industrial robot-maker on the mainland. The company has a long growth runway and potential to scale in a fragmented industry, underpinned by rebounding industrial demand, growing adoption of robots and the emergence of new sectors, such as electric vehicles.

Another five initiations were from Taiwan. Alchip Technologies is one of the top integrated circuit design houses globally. It specialises in artificial intelligence and high-powered computing, as well as advanced node back-end application-specific integrated circuit (ASIC) design. We expect ASIC adoption from China and US startups and system companies globally to accelerate, with Alchip in a prime position to benefit from this structural growth trend. Meanwhile, Andes Technology is one of the top three companies globally for RISC-V, an open source instruction set architecture (ISA) that defines how software interacts with a processor. We see RISC-V gaining market share from players who use x86 ISA, such as Intel and AMD. This is because RISC-V is a fundamentally simpler ISA with better power-performance-area attributes. The third, KMC, is the top producer of bike chains globally. We expect the company to be a beneficiary of increasing demand for cleaner transport modes in developed markets, as well as the growing popularity of e-bikes. We also introduced Momo.com, the largest online retailer in the country, as a proxy for domestic consumer spending. It is benefitting from growth in the underpenetrated e-commerce market, as consumers and vendors increasingly shift online. Its prospects are well supported by its logistics edge,

broad product offering and scale benefits. Lastly, Poya is the largest domestic personal care chain store that has been gaining share in a fragmented market. It is investing in logistics to drive better operating efficiencies, and accelerating plans for e-commerce given its early success in its online payments and shopping platform. We consider Poya an interesting reopening play with good long-term growth potential.

Elsewhere in North Asia, we bought Hong Kong-headquartered Pacific Shipping Basin. We expect the dry bulk ship owner and operator to benefit from a multi-year recovery in profitability.

In India, we invested in Indiamart, the dominant, subscription-based online business-to-business (B2B) marketplace platform for industrial and office supplies. It is now monetising the platform and is expected to generate solid double digit growth in subscriber numbers and revenues over the medium term. We also introduced Aptus Value Housing Finance, an affordable housing company with a good foothold in South India. The segment has ample opportunity for growth, while Aptus is superior to its peers in terms of asset quality, loan yields and return ratios.

In Thailand, we participated in the initial public offer of Ngern Tid Lor, a microfinancing company. We think NTL, which has the largest loan book of such auto title loans, is well-placed, given the significant underbanked and unbanked population segments in Thailand. We also bought Osotspa, a large domestic producer of beverages, particularly energy drinks, and personal care products. We see growth coming from new products and its expansion into neighbouring Cambodia, Laos, Myanmar and Vietnam. Elsewhere in Southeast Asia, we started a position in Indonesian microfinance bank Bank BTPN Syariah. It focuses mainly on female customers in rural areas, where competition so far has been muted and where the bank has developed good brand equity with customers.

Finally, in Australia, we purchased wealth management specialist platform provider Hub24 as well as pure-play copper producer Oz Minerals. Hub24 offers application and technology products to the financial services sector, and we believe it will continue to benefit strongly from the ongoing migration of funds away from the legacy platforms. Oz Minerals owns and operates long-life, low-cost assets with an attractive growth profile. We see upside potential in both copper and nickel, underpinned by decarbonisation trends.

Against these, we sold 51Job, China Conch Venture and Xero as they had become large-cap stocks. We also exited the following for better opportunities elsewhere: Aeon Thana Sinsap, Ascendas India Trust, Auckland International

Asian Smaller Companies Fund

Continued

Airport, Baozun, Beijing Sinnet, Biocon, Guangzhou Baiyun International Airport, Hang Lung Group, John Keells, Kansai Nerolack Paints, Multi-Bintang Indonesia, Northern Star Resources, Oriental Holdings, SBS Transit, Ujjivan Financial Services, Ujjivan Small Finance Bank, Voltronic Power and Yoma Strategic.

Outlook

Despite renewed outbreaks of Covid-19, regulatory pressures, particularly in China, and niggling worries over inflation and rising rates, we see reasons to be optimistic about Asian small cap stocks. While regulatory risks persist in China, we believe the authorities want to strike a good balance between promoting innovation and achieving its political goals. In particular, we prefer high-quality companies that have strong links to domestic consumption. Being in line with the strategic aims of Chinese authorities, the sector should be better positioned to withstand regulatory headwinds, and therefore continue to prosper.

Meanwhile, US-China geopolitical tensions will continue to drive China's push for self-sufficiency, which in turn presents investment opportunities, whether in the domestic consumption sector, tech, or green energy. We continue to position our portfolio around structural growth themes such as these that will weather the near-term uncertainties.

Lastly, despite coronavirus-related disruptions, corporate earnings growth remains likely to rebound this year, led in particular by the robust tech hardware sector. Vaccination rates are now accelerating across the region and should gradually lead to easing restrictions and further economic reopening. This would help mitigate inflationary pressures tied to near-term supply chain bottlenecks. As stock-pickers, we remain focused on companies with pricing power and the ability to pass through cost pressures.

Market review

Asian equities rose over the 12 months. Stocks advanced through the last quarter of 2020, buoyed by the start of vaccine rollouts and Joe Biden's presidential election victory in the US. However, rising bond yields capped gains. Chinese markets, which had performed well for most of the period, also fell sharply in July after the authorities unveiled stricter rules for the private education, internet and property sectors. This sparked a broader market sell-off throughout the region, as investors fretted about potential regulations in other sectors. Stocks related to the green economy theme were, however, notably more resilient. Supporting stock markets were positive corporate earnings and hopes around economic reopening on the back of vaccine rollouts.

Portfolio review

The Fund significantly outperformed its benchmark, thanks to both positive asset allocation and stock selection.

China was key to the Fund's returns. Although the market lagged the broader region, our stock picks there boosted relative returns, thanks to the solid performance of our green-economy and healthcare holdings. Renewable energy play Longi Green Energy Technology continued to benefit from the attractive long-term outlook for solar modules, tied to president Xi Jinping's carbon-zero targets.

Chinese wind turbine manufacturer Xinjiang Goldwind rallied on the back of a forecast by the China Electricity Council that the country would add around 50 gigawatts (GW) of wind capacity in 2021, more than market expectations of 30GW–40GW. Meanwhile, newly-initiated photovoltaic inverter manufacturer Sungrow enjoyed a good run as it continued to benefit from the growing penetration of renewables. Contemporary Amperex Technology (CATL), a leading battery maker with dominant market share in China, was also among the top performers amid growing domestic demand for electric vehicles (EVs). In the healthcare sector, Wuxi Biologics advanced as the contract drug manufacturer continued to benefit from healthy demand for global outsourcing. These cushioned the losses from Ping An Insurance, GDS Holdings, and 51job. Ping An Insurance lagged due to concerns about its China property investment exposure. Chinese data-centre operator GDS Holdings sold off on concerns surrounding the potential impact of data security laws on its business, which we believe to be unfounded. Online recruitment firm 51job declined after a run-up in the share price on the back of a takeover offer that we felt undervalued the business.

Meanwhile, the Fund's off-benchmark holdings in Dutch semiconductor equipment makers, ASML Holdings and ASM International, stood out as well. A global chip shortage lifted shares of the two companies. We believe they are well-placed and competitively positioned to expand alongside the structural growth in semiconductor capital spending that we are observing globally. In the wider tech sector, our lack of exposure to Chinese benchmark heavyweights Alibaba and Tencent also helped returns as they were affected by a regulatory clampdown. These mitigated the impact of poor performance by internet services provider Beijing Sinnet Technology, which delivered weaker-than-expected results on a delay in projects, partly as a result of the pandemic. We have since exited the stock for better opportunities elsewhere.

In India, our healthcare holding Biocon corrected as its management change was seen to be adding uncertainty to its strategy implementation.

In portfolio activity, we took advantage of market volatility to initiate positions in quality stocks.

A number of these were in China. Zai Lab is a pharmaceutical company which licenses-in drugs, commercialising innovative drugs within China. Its products cover five key cancer types, while the company also has an in-house development pipeline. Sungrow is a leading supplier of inverters, an essential component of solar projects. Battery maker CATL, mentioned above, has a strong moat on top of symbiosis with the local supply chain, good brand recognition across global customers and rapid pick-up in technology development. We believe

Asian Sustainable Development Equity Fund

Continued

CATL is well positioned to benefit from the growing penetration of electric vehicles globally. The position complements our exposure to Korean battery makers LG Chem and Samsung SDI. In the same vein, in South Korea we initiated a position in chemical business Chunbo, a key supplier in the battery supply chain. Research and development undertaken by the business directly impacts the quality of battery technology, contributing to the longevity and charging ability of the finished product which supports EV development.

We also introduced some new Indian holdings. Aptus Housing is an affordable housing company with a strong foothold in South India. The industry has ample opportunity for growth and Aptus has superior metrics relative to its peers in terms of asset quality, loan yields and return ratios. Management is conservative and has always kept a robust balance sheet. ICICI Bank is an Indian commercial lender with a strong focus on priority sector lending, including agriculture and micro, small and medium enterprises. Azure Power Global is a leading Indian solar farm operator. The company currently operates around 2 GW of generating capacity and has more under construction and in the pipeline. These will transform the scale of its business and drive significant growth over the medium term, giving the company one of the largest solar portfolios in India. ReNew Energy Global generates electricity from renewable sources in India, from a mix of wind, solar, and more recently hydro. The company has both scale and clarity around its pipeline, and importantly is fully funded for its capacity build-out. We also like that management has shown discipline in bidding at renewable energy auctions.

In the technology sector, we bought the Netherland's ASM International, a supplier of deposition-related semiconductor equipment, and the number one vendor of atomic layer deposition tools. ASM plays a key role in enabling the development of smaller semiconductors with higher energy efficiency. We also invested in Bukalapak, an Indonesian e-commerce company with an offline-to-online business model. The company helps micro-small-medium enterprises (MSMEs) transition from offline retail to online digital models, while also providing them with a platform to procure products for sale to end users.

Finally, we started a small position in Hong Kong soy milk producer Vitasoy, which supports transition to a lower-carbon food system. Soy milk has a much lower carbon footprint than most other milk including cow milk, and we view the company as a sustainability leader.

We funded these by selling Bandhan Bank, Beijing Sinnet, China Resources Land, Godrej Agrovvet, Square Pharma, and Ultrajaya.

Outlook

Despite renewed outbreaks of Covid-19, regulatory pressures, particularly in China, and niggling worries over inflation and rising rates, we see reasons to be optimistic about Asian equities. While regulatory risks persist in China, we believe the authorities want to strike a good balance between promoting innovation and achieving its political goals. Meanwhile, despite coronavirus-related disruptions, corporate earnings growth remains likely to rebound this year, led in particular by the robust tech hardware sector. Vaccination rates are now accelerating across the region and should gradually lead to easing restrictions and further economic reopening. This would help mitigate inflationary pressures tied to near-term supply chain bottlenecks. As stock-pickers, we remain focused on companies with pricing power and the ability to pass through cost pressures.

Having said that, while we track these market developments closely, we remain focused on the long-term attraction of the companies we invest in, and the growing investment case for the eight impact pillars we are focused on. Aligned to one or more of the United Nations Sustainable Development Goals, these are: circular economy; food and agriculture; education and employment; financial inclusion; health and social care; sustainable energy; sustainable real estate and infrastructure; and water and sanitation.

ASI-CCBI Belt & Road Bond Fund

For the period ended 30 September 2021

Commencement of Fund

The CSSF approved the Fund for launch on 2 October 2020.

The first net asset value (NAV) calculation for the Fund was on 23 October 2020.

Performance

For the period from 23 October 2020 to 30 September 2021, the value of ASI-CCBI Belt and Road Bond – A Accumulation shares increased by 3.58%. The Fund does not have an official benchmark.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Emerging market (EM) debt returns were positive over the period. Relatively smooth US elections, the passing of new stimulus in the US and the start of vaccine rollouts all boosted risk sentiment. In particular, the latter led to several countries reopening, especially in the developed world, and increased optimism for a global economic recovery. Treasury yields rose over the period. The US Federal Reserve signalled that it could start tapering asset purchases in November, with many of its members supporting a rate hike in 2022. Oil prices also climbed, supported by rising demand along with widespread supply disruption and falling inventories.

China dominated news flow for most of the period. Initially, troubled bad-debt manager Huarong captured headlines, as its substantial losses resulted in delayed financial reporting and a capital shortfall. Its bond prices fell to around 50 cents on the dollar, but eventually recovered after a state-backed bailout was announced. Later, in mid-2021, Beijing unveiled new regulations in the private education and technology sectors as it shifted towards a policy goal of "common prosperity". Regulators had already tightened their stance towards the property sector earlier, to reduce financial system risk, which ultimately triggered several defaults in the sector. As of end-September, Evergrande, one of the country's largest developers, had missed interest payments for two offshore bond issues, although by the time this happened the market had largely already priced a credit event in. At the time of writing, regulators were beginning to signal some moderation in their policy stance, as seen in greater mortgage availability and local policy easing, and becoming more involved in Evergrande's restructuring process. We see little risk of systemic financial contagion

domestically from an Evergrande default, as well as between China and global financial markets. However, we also believe there are building risks to China's growth as more developers get ensnared in the growing confidence crisis.

During the period, Chinese president Xi Jinping said the country would stop financing new coal-fired power plants abroad, and would instead step up support for other countries to develop green and low-carbon energy. He did not lay out any timeline, but China has reportedly not directed any funding from the Belt and Road Initiative (BRI) toward coal power plants in 2021. Energy will likely remain a core focus of BRI, but one where China is increasingly focused on a more sustainable path forward.

Portfolio review

The Fund delivered a strong positive total return over the period. At the country level, the exposure to Ukraine, Indonesia, Nigeria, India and China were top contributors, in that order. On the other hand, positions in Egypt and Brazil detracted from returns.

In portfolio activity, following the Fund's inception in late October, most of the available cash was deployed in November. Over the review period, we reduced overall exposure to China, initially on concerns that certain Chinese companies faced the risk of US sanctions. We also sold positions in companies where idiosyncratic or regulatory risks were rising, such as Yunnan Energy, China Fortune Land and New Oriental Education. Elsewhere, we switched from high-quality state banks into high-quality local state-owned enterprises and local-government financing vehicles (LGFV), for a pick-up in yield.

The Fund's position in India was gradually increased over the period, as we held the view that a downgrade of its sovereign rating was unlikely. We bought mining group Vedanta after the company significantly improved its liquidity on the back of a rebound in commodity prices. Meanwhile, the Fund participated in HDFC Bank's new issue, given its strong credit fundamentals and expected scarcity value of the bonds. We also used the primary market to build up exposure to the renewables sector in the country; we added India Green Power to the existing position in Adani Green Energy.

We raised the Fund's positions in the sovereign sector during the period via Morocco, Egypt, Jordan and Uzbekistan government bonds. We also added exposure to Mongolia sovereign bonds, having sold the position in Mongolian Mining, which we had waning conviction in. On the other hand, we sold positions in Georgia, where spreads had little room to tighten and in El Salvador, as the market had fully priced in the prospect of an International Monetary Fund (IMF) programme.

ASI-CCBI Belt & Road Bond Fund

Continued

Outlook

We remain cautiously optimistic on the outlook for emerging market bonds. The overall growth environment should remain supportive as the IMF forecasts emerging-market growth at 6% in 2021, from an estimated contraction of 3.3% in 2020. We expect Southeast Asia to play catch-up as these countries step up their vaccination drives and roll back mobility restrictions. However, without more decisive policy easing, growth in China is expected to continue to moderate. While we expect to see further steps toward monetary policy normalisation in the developed markets, overall policy settings will remain loose by historical standards. The risks to our outlook include a more pronounced slowdown in China than already anticipated or a resurgence of Covid-19 amid new variants. A faster pace of monetary policy normalisation could result in rapidly rising US Treasury yields and sustained US-dollar strength.

Australasian Equity Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of Australasian Equity – A Accumulation shares increased by 26.21% compared to an increase of 31.46% in the benchmark, the Australian Stock Exchange All Ordinaries TR Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, AUD.

Benchmark return: Source: Lipper, Basis: close of business return, income reinvested, gross of expenses, AUD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Australian equities advanced in tandem with their peers across Asia Pacific and the wider developed markets over the period. Lifting stocks was optimism that the expanding rollout of Covid-19 vaccines would fuel a faster global recovery. Improving economic readings at home and from key trading partners, and the Reserve Bank of Australia's loose monetary policy, further buoyed sentiment. The resource-rich market also gained from a rally in key commodities, including oil and iron ore. All these offset worries about Australia's worsening relations with China and a rise in Covid-19 cases later in the period.

The rise in Covid-19 cases started to adversely affect equity markets from the third quarter of 2021. Rising Covid-19 rates also led to falling retail sales as lockdowns in the largest states, New South Wales and Victoria, took hold.

As expected, the Reserve Bank of Australia kept the cash rate unchanged at a record low of 0.1% during its September meeting at the end of the period, and stated rates would remain at this level until inflation is comfortably within the target range of 2-3%. Meanwhile, the central bank still plans to trim the purchase of government bonds to AU\$4 billion per week until at least mid-February 2022.

Portfolio review

The Fund posted strong returns but underperformed the benchmark over the period. There was a broad rotation away from quality growth-oriented names in favour of those seen as benefiting more from the economic rebound.

Our stock selection within the financial sector detracted. Within the segment, banking stocks had a good run due to expectations of an economic rebound, with structurally lower loan losses, a steepening of the yield curve and forecasts of higher credit growth from the housing

recovery. The Australian lenders are also well capitalised, with potential for additional capital returns to shareholders. The light position in Westpac Banking weighed on the Fund, although the position in Commonwealth Bank helped to lessen those losses.

Elsewhere, Wesfarmers performed poorly. The firm's proposed takeover of API was interrupted by a competing bid from Sigma. There was no other material news affecting the company, but the stock was weaker towards the end of the period, despite our belief that its retail chains remain highly resilient.

Stock selection in the materials sector added value during the period. BHP was the top individual contributor to returns, thanks to robust results and a higher-than-expected dividend. The mining giant continued to execute well operationally, with record iron ore production, alongside lower operating costs, despite the effects of Covid-19, weather disruptions and other inflationary pressures. Oz Minerals also gained on sustained strength in copper prices. Conversely, Northern Star Resources was a major detractor as its shares tracked a decline in the price of gold. The lack of exposure to Fortescue Metals also proved costly.

Separately, cloud-based accounting software provider Xero contributed positively, despite bouts of profit-taking pressure amid the market rotation into lower-valuation cyclical names. The company continued to see decent subscriber growth in a challenging period, while costs remained well-managed. We remain attracted to the company's market-leading product, track record of execution and growth potential of its platform.

Despite the Fund's overweight position in health care sector being a significant detractor from returns, this was offset, to an extent, by stock selection in the sector. Most notably, ResMed helped returns, as the firm benefited from the failure of key competitor Philips, which announced a global device product recall. As the global market leader in sleep apnoea, this effectively gives ResMed a clear runway to grow market share for the next year and beyond.

In key portfolio activity, we exited Origin Energy as our view on relative stock returns had moderated. We have become more concerned about longer term regulatory strain and the structural risk of lower wholesale electricity prices amid a shift to renewable sources. Against this, we established positions in two new holdings, namely Wesfarmers (see above) and Mercury New Zealand. Our investment in Wesfarmers reflects our view that the domestic housing recovery will drive robust earnings at its household hardware chain, Bunnings. Meanwhile, our positive view on Mercury is due to its exposure to 100% renewable electricity generation, with a share-price

Australasian Equity Fund

Continued

pullback offering an attractive entry point. We also added Pro Medicus, which supplies imaging software to hospitals globally. It is a high-quality, high-margin business with long-term recurring revenue streams and a track record of delivering robust organic growth.

Toward the end of the period, we added two new positions to the portfolio: IDP Education and Megaport. Global student placement provider IDP Education should benefit from the reopening of international borders, with the company also investing heavily into its digital offering. Universities should continue to value IDP's services after Covid-19 restrictions end. Megaport, the interconnectivity services provider, is well placed to benefit from the global structural shift onto the cloud. Forward indicators such as port utilisation, geographical reach and new products – including software-defined wide-area network (SD-WAN) infrastructure – points to further growth opportunities.

Outlook

As we see the domestic economy begin to reopen, we expect a strong rebound in the fundamental drivers of business confidence, consumer sentiment and unemployment. While we believe the momentum in earnings growth has peaked, we still expect a positive growth skew over the coming months and the earnings up-cycle to continue.

In addition, the central bank's pledge to keep interest rates lower for longer should support asset prices. A strengthening property market will also boost consumer spending, construction and employment. At the corporate level, as the recovery continues, companies are likely to move from capital preservation to capital allocation, with a notable pick-up in M&A activity and capital management.

We remain committed to our bottom-up investment style with a focus on quality companies. We favour businesses with clear growth prospects that are leveraged to long-term structural shifts. Our holdings' defensiveness, in terms of their robust balance sheets and prospects for through-cycle earnings and dividend growth, is an added advantage. Many are also leaders on governance and sustainability, positioning them well to adapt to future challenges and opportunities. This will ensure that the portfolio remains resilient amid present uncertainties and well-placed to deliver steady returns in the long run.

Market review

Australian government bonds sold off during the six months to the end March as yields rose sharply and the curve steepened as the economic recovery from the global pandemic gained momentum which then led to concerns over inflation.

The Australian Commonwealth Government Bond (ACGB) 10-year yield began October 0.79% peaking at 1.9% at the end of February before ending March at 1.8%.

News of a successful vaccine discovery in November eclipsed Joe Biden's presidential election win, which along with a proposed US\$900 billion stimulus package helped equity markets achieve their best monthly return in 23 years. Central banks across the world reinforced their support with further easing of monetary policy. In Australia Yield Curve Control, the Term Funding Facility and the largely symbolic cash rate were all cut from 0.25% to a record low 0.1%. Semis outperformed as the Reserve Bank of Australia (RBA) added the purchase of Australian State debt to their bond-buying programme.

The Australian dollar continued to surge along with commodity and energy prices going into 2021 on the optimistic economic outlook despite fears of a second wave of the Covid-19 pandemic hitting Europe hard. Victoria which had suffered the toughest lockdown in Australia received a two-notch downgrade by S&P to AA, while New South Wales (NSW) was unexpectedly downgraded one notch to AA+.

By February, very little community transmission and relaxation to social distancing rules had helped the Australian unemployment rate fall to 6.4%. The recalibration in the inflation outlook then became a focal point. Despite RBA's guidance that it doesn't expect to raise rates until 2024, the markets began pricing in a 250bp cycle beginning late 2022. Wording changed from committing not to raise rates for three years to communicating the necessary conditions required for rates to rise, wage growth and sustained inflation. The Australian government sold off with the yield curve steepening sharply, as the 10-year yield rose 48 basis points (bps) during February while the US 10-year yields increased 43bps.

March saw bond markets stabilise as inflation concerns subsided despite unemployment now below 5.8% as more people are now employed in Australia than before the pandemic. The 1.1% inflation figure fell short of its 1.4% surveyed figure and for the time being the bond market appears to broadly accept that inflation pressures will be transitory and central banks remain committed to keeping rates lower for longer.

Portfolio review

The Fund underperformed the benchmark during the review period. During February ACGB sold off sharply due to inflation concerns as investors questioned whether the RBA may compel a faster than expected unwinding of loose monetary policies. Overweight positions, particularly at the very long end of curve, in the 20-year maturity bucket were hit the hardest as long-term yields rose and the curve steepened significantly.

Although Victoria and NSW governments received downgrades by S&P in November, the RBA's moves to include semi-government debt as part of their quantitative easing programme saw the asset class perform well. The Fund's overweight in both New South Wales Treasury Corporation and Treasury Corporation of Victoria were positive contributors for the Fund.

Outlook

The Fund was terminated on 31 March 2021.

Market review

The 12-month period to the end of September 2021 has been an eventful one. Fixed income markets began the year with ACGB 10-year yield around 0.90%, peaking at 1.9% before ending at 1.49% with yield curve steepening meaningfully. Financial credit spreads tightened 32 basis points (bps) with non-financials compressing 11bps.

The period began with Victoria lifting Covid-19 lockdown restrictions prompted a tightening in credit spreads with cyclicals outperforming. The Reserve Bank of Australia (RBA) stepped in to lower the official cash rate to a record low 0.1% and announced additional buying of 5year-10year bonds. Technicals improved further as bank new issuance slowed with the major banks given access to the RBA's Term Funding Facility.

Joe Biden's US election victory and positive vaccine news triggered a massive rally in risk assets. November saw equities having their best monthly performance in over two decades. Credit spreads tightened significantly with unloved industries, REITs, airlines and infrastructure all outperforming.

By the end of 2020 many sectors were trading back or close to their pre-crisis levels. Further easing of travel restrictions saw sentiment improve, encouraging investors to move up the risk curve into lower rated names with attractive valuations, as BBB- were still 50bps wider than pre-Covid levels.

Throughout January ACGB yields rose on gathering momentum in the global economy as credit and non-financials spreads ground tighter. However this was to change in February, rates sold off sharply prompting risk assets to fall with the equity tech sector particularly hard hit. The ACGB Dec 30 yield rose 76bps in February although this was partially reversed at the start of March. The moves could be attributed to the recalibration of the market's global inflation outlook, as treasuries led the selloff, UST 10year rising 43 bps. The RBA had begun

February announcing a further AU\$100 billion of asset purchases. However instead of committing explicitly to no rate rises for the next three years, the RBA instead communicated the necessary conditions of wage growth and consumer price index (CPI) levels that could lead to a rate rise. "The board does not expect these conditions to be met until 2024 at the earliest". Although the move higher in yields was driven by inflationary pressures there was no single data point that triggered the selloff.

Half year reporting season followed highlighting that although credit metrics had deteriorated operating metrics proved that many companies were recovering from the Covid-19 slowdowns. Leverage rose as earning declined, although favourable working capital enabled cashflows to improve. M&A activities were subdued with dividends payments to shareholders increasing.

After an initial dip March saw yields moving back towards their recent highs as increasing supply and the news of a US stimulus plan brought further hope of more economic growth. Credit spreads continued to rally going into April despite issuance picking up with a number of corporations opportunistically issuing to take advantage of low yields.

June started with a burst of optimism with inflation fears subsiding and yield curves flattening. US CPI supported the US Federal Reserve (FED)'s mantra that inflation would be transitory which took the heat of inflation fears. However by the end of the month this optimism evaporated as Covid-19 reappeared on Australian shores and Sydney went into lockdown after an outbreak of the Delta strain. As Covid-19 took hold the weakening outlook weighted on financials but was offset by the material and mining sectors as commodity prices boomed. However June was to be the peak for iron ore at around US\$220/t which then fell to US\$100/t by mid-September on the back of Chinese government intervention in the steel industry.

Through July in to August yields touched their lowest levels since February. The ACGB Dec 31 yield fell 42bps as it became evident that the initial snap lockdown would turn into months for the majority of the Australian population. Despite this global and local equity markets hit record highs, although the AUD fell from 77c to a low of 71c in August. Full year reporting season had very little impact on credit spreads. Strong growth in revenue and earnings across almost all sectors were reported however no guidance given for FY22 due to the Covid-19 uncertainty. As case number continued to tick up state Premiers accepted that they would be unable to defeat the Delta strain and vaccination would be the only way out of the predicament, with target rate of 80% set. Supply in Pfizer vaccines finally caught up with demand after AstraZeneca vaccine was deemed unsuitable for the under 60s. By September after months of falling, yields rose notably.

Australian Dollar Income Bond Fund

Continued

Markets began looking passed the lockdown in Australia and priced in optimism as NSW reached vaccination targets. 10yr ACGB rose by 33bps to 1.49%. This caused credit markets to deliver negative returns in September despite spreads tightening marginally during the month, in what had been a strong 12 month period.

Portfolio review

The Fund delivered a strong total return for the 12 month period and significantly outperformed its benchmark. With a large allocation to higher yielding, cyclical names, the Fund benefited from its positions in sectors hardest hit by the initial Covid-19 pandemic as restrictions eased and economies reopened.

Top contributor in the Fund was Scentre Group, the real estate REIT which reported a significant operational improvement from previous year as office workers slowly return to central business districts in the large cities.

Despite revenues declining 70% in FY21, investors looked past the closure of domestic and international borders as Qantas began executing its 3 year recovery plans with ample liquidity to see it through the current difficult period. Qantas 5.25% 30s spreads tightening 130bps.

Having been downgraded to high yield in March 2020, Ford was removed from negative watch in November 2020 by Moody's. Ford has made significant progress towards restructuring its business and moving forward with their EV ambition which was well received by investors.

Financials benefited from strong technicals as reduced supply saw banking spreads tighten. Due to a significant pick up in the savings rate and taking advantage of the RBA's Term Funding Facility, major banks issuance slowed. An improvement in sentiment saw investors move up the risk curve into subordinated financials which enabled BNP 4.5% perp, UBS 4.38% perps, MQGAU 6.18% to all perform strongly as economic conditions improved.

Another significant contribution to performance was the short duration position in Interest Rate Swaps that has insulated the portfolio from periods of rising yields, particularly in February 2021 when ACGB reached 1.9% and again at the start of September 21. The duration of the portfolio has been around 2.5-3yr throughout the 12 month period.

The largest negative contributors were FMG and Ausnet. FMG, Fortescue metals group, the iron ore miner reported record FY21 results benefiting from high iron ore prices and strong operational performance. However increasing costs at its Iron Bridge project and a plummeting iron ore price which fell 53% in the last three months to September caused spreads widened.

Victorian gas and electrical distributor Ausnet, corporate hybrid also underperformed after the company became subject to two takeover bids from APA group and Brookfield. Having traded significantly above par at a price of 106 it's likely that the bonds will now be called causing the price to fall.

Outlook

Australia is set to emerge from lockdown in the fourth quarter with promises of open State and International borders in time for Christmas. With national vaccination rates predicted to be amongst the highest in world (above 90% of the eligible population) there is cautious optimism for the Australian economy. High inoculation levels will enable health services to cope with the inevitable spike in Covid-19 cases and reduce the likelihood of snap State lockdowns as Australians learn to live with Covid-19 for the first time.

With New South Wales having spent 107 days in lockdown and Melbourne the world's most lockdown city, a weary population is expected to spend. Bricks and mortar retailers, airlines and retail focussed REITs will be amongst the many beneficiaries, further supported by fiscal spending from both State and Federal governments.

Australian corporates remain in good shape with strong balance sheets and excellent liquidity, taking advantage of QE to refinance debt at record low levels. Only those under the most stress have attempted to reduce leverage, with shareholders enjoying capital returns at the detriment of the credit investor whilst cheap money has fuelled the hottest M&A environment in decades. We expect both trends to continue into 2022.

Recent macro prudential measures from financial regulator APRA will see housing credit growth slow, although nationally property prices are still forecasted to appreciate by 7% in 2022. A strong property market will support consumer spending, construction and increase employment. Despite this we expect senior bank spreads will widen in the short term due to increased supply now that the RBA's Term Funding Facility has been wound down.

The extent of margin erosion due to inflationary headwinds remains an unknown. The closure of international borders has seen Australian net migration fall to its lowest in 100 years at -97k in 2020/21, with reported labour shortages across all sectors of the economy. This has been further compounded by rising energy costs and global supply chain bottlenecks. The term "transitory" inflation appears to growing longer by the day.

Australian Dollar Income Bond Fund

Continued

Although tapering has begun the dovish RBA remains accommodative, adamant they won't tighten until at least 2023. Markets aren't so sure with 100bps in rate hikes already priced in by the end of 2023 on the back of rising inflation fears.

China and Australian political tensions remain heightened and aren't expected to improve anytime soon, a slowing Chinese economy has ramifications for the price and demand of iron ore however we expect global appetite for Australian commodities to remain robust as countries look to de-carbonise their economies.

To summary the macro backdrop remains highly supportive for credit as Covid-19 restrictions are eased, however short term we could see spreads widen modestly, reflecting the possibility of higher yields, on the back of FED tapering, increased supply and investor caution due to inflation dynamics.

Market review

Brazilian equities advanced over the half year, but lagged a number of their Latin American counterparts. The region's largest market began the period on an upbeat note, thanks to the rollout of Covid-19 vaccines and improving economic readings. There was also positive news in politics as the Senate passed a law to protect the central bank's autonomy.

However, the mood turned negative at the turn of the year as vaccine supply delays hampered the country's inoculation drive. The leadership change at Petrobras further weighed on sentiment as it triggered investors' fears of increased government meddling in financial markets. Brazil's President Jair Bolsonaro moved to remove chief executive, Roberto Castello Branco, due to public clashes over fuel pricing. Bolsonaro named a former army general, Joaquim Silva E Luna, as the oil giant's new head.

Meanwhile, fresh concerns about inflation surfaced as consumer prices rose to multi-year highs. This compelled the central bank to raise its benchmark rate for the first time since 2015. The 0.75% hike was sharper than expected, and policymakers warned of another increase in May.

Outlook

The Fund was closed and its holdings liquidated by 15 October 2020.

Market review

Chinese equities rose through much of the period but gave back some gains in the third quarter of 2021. Healthy domestic economic data and the rapid recovery of corporate earnings initially supported share prices, as investors cheered the vaccine rollout globally and drove a rotation out of quality stocks that did well in the pandemic, into cyclical and undervalued sectors. However, as the 12-months progressed, expectations of tighter monetary policy to control inflation and excessive debt, new government regulations and a potential default at real-estate business Evergrande weighed on equity markets.

Throughout the period, the People's Bank of China stayed accommodative and prioritised consumption and investment over rising inflation. However, the tougher regulatory environment capped gains as Beijing stepped up scrutiny of its internet and education sector, alongside tightening of the real estate and banking. Meanwhile, the Chinese Communist Party marked the centennial of its founding on July 1, where President Xi Jinping warned that it would not tolerate any sovereignty infringements. Elsewhere, US-China relations remained tense after the former banned imports of solar panels from China's Xinjiang province amid alleged human rights violations.

The final quarter of the period was turbulent, characterised by frenetic and unexpected regulatory intervention focusing on the tech sector, but later

spreading to other areas like media and entertainment, with threats of further regulatory action at one point wiping up to US\$500 billion off Chinese markets. This occurred as part of a broader government crackdown and determination to regain control of the economy and reduce the wealth gap to create 'common prosperity'. In September, the volatility and uncertainty triggered concerns about debt-ridden Evergrande, one of China's largest property developers. Swift action by China's central bank, the People's Bank of China (PBoC), averted a collapse of the property group on fears it would miss a scheduled debt repayment. The PBoC promised to protect consumers exposed to the property market.

Portfolio review

The health care, financials and consumer discretionary sectors drove returns. Conversely, materials and industrials detracted.

Although stock selection within financials proved beneficial, the Fund's position in Ping An Insurance detracted. The company's stock price weakened due to concerns within the life insurance industry and about the firm's China property exposure. Midea also detracted after its shares gave up gains amid a tighter credit stance and weaker-than-expected retail data.

Industrials detracted as the outlook for Shanghai International Airport's international passenger flow continued to be muted by a resurgence of the Covid-19 pandemic around the world despite the vaccine rollout. Helping to pare losses was Nari Technology. It benefited from state-owned parent, State Grid Corp of China's upgrade of a massive electricity grid covering about 90% of the country. We like Nari Tech's leading position in secondary power equipment and software, given China's ambitions in renewable energy. Growth areas include charging infrastructure for new energy vehicles, power trading and global energy internet.

Leading lithium-ion battery separators maker Yunnan Energy contributed to relative performance. The company benefited from a supply shortage and raised its second-quarter earnings expectations, thanks to an increase in demand, continued capacity growth and operational efficiency.

In health care, Chinese companies' increasing R&D spending in drug research boosted Hangzhou Tigermed. Meanwhile, Aier Eye Hospital continued to post rapid earnings growth on greater demand for eyecare due to work-from-home lifestyles, while its hospital network continued to penetrate more cities China.

We added new positions that are positioned to benefit from China's drive for carbon neutrality included solar wafer giant Longi Green Energy and Li-ion battery

China A Share Equity Fund

Continued

maker Contemporary Amperex. We also introduced pharmaceutical company Jiangsu Hengrui, AirPods assembler Luxshare Precision, and China's largest investment bank China International Capital Corp.

Meanwhile, we introduced Yonyou Network, Hundsun Technologies and By-health. These companies have clear competitive advantages, which we believe will enable them to defend their market leadership over the long term. We also purchased Shenzhen Inovance and Sungrow Power Supply. Shenzhen Inovance is a leader in China's industrial automation sector with a strong track record, competitive products, diversified revenue streams and cost advantage underpinned by effective supply chain management. Sungrow is well positioned to benefit from multi-year growth in both solar demand, as the leading producer of solar inverters, and a solar energy performance certificate farm operator, as well as energy storage.

Against these, we exited Hangzhou Hikvision, China Resources Sanjiu, Hangzhou Robam, China Construction Bank, Industrial and Commercial Bank, Haier Smart Home, Yonghui Superstores, China Life Insurance and Shenzhen Airport.

Outlook

The regulatory measures imposed by the government came as a surprise. But we do believe that these changes should be seen in the context of a fast-changing technology landscape. Regulators are trying to keep pace with innovation, but a heavy-handed clampdown on all private new-economy sectors is unlikely. The new economy is a vital component of China's vision for a modern consumption-led economy. Further, the private sector retains a critical role in ensuring that the Chinese economy continues to innovate and prosper, and that Beijing reaches its goal of being a moderately prosperous nation by 2035. China still needs well-functioning capital markets to help propel growth.

We feel that the reaction to the measures was overdone and that the indiscriminate selling will create investment opportunities. Companies that can adapt to changing regulatory frameworks, and align with policy objectives such as digital innovation, green technology, access to affordable healthcare and improved welfare, have a bright outlook. Moreover, investors are likely to refocus on company-specific factors in the following result seasons, which should benefit our high-quality holdings.

China Onshore Bond Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of the China Onshore Bond Fund– A Accumulation shares increased by 8.79% compared to an increase of 9.97% in the benchmark, the FTSE World Government Bond Extended China 1–10 Years Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Benchmark return: Source: Lipper, Basis: close of business return, income reinvested, gross of expenses, USD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Chinese local-currency government bond yields fell during the year under review. At the start, better economic data and US Treasury movements pushed yields higher, while the People's Bank of China turned hawkish and sought an exit from loose pandemic-era policies. The government also unveiled an upbeat 14th five-year plan that focused on economic development through the modernisation of industries, strengthening supply chains, fostering innovation, as well as aiming to be carbon neutral by 2060. However, the tone changed in the second half, with the government taking a tougher regulatory stance on the education, property and technology sectors. This dented risk appetite. Weakening data pointed to a slowing economy as the authorities imposed mobility restrictions to contain the rise in Covid-19 infections in several provinces. Additionally, concerns over real-estate developer Evergrande Group's debt default also kept investors jittery. The central bank cut the reserve requirement ratio (RRR) and injected liquidity to calm the market. Geopolitical tensions between China and its neighbours, as well as with the US continued to escalate. By the end of the period, Chinese government bond yields had fallen between 27 and 41 basis points (bps) across the curve. Nevertheless, the Chinese yuan was the best performing currency in the region, strengthening by 5.4% against the US dollar.

In key economic data, inflation eased in September. Leading indicators for manufacturing and services edged lower, with to 50.1 and 47.5 from 50.4 and 53.3 previously as economic activities were affected by a resurgence in Covid-19 infections. Retail sales plummeted, while fixed-asset investments dipped. Factory activity contracted in September for the first time since February 2020, indicating a slowdown in the world's second-largest economy.

In corporate news, the stricter regulatory environment for the education, tech and real-estate sectors sparked a broad-based sell-off in credit. This was exacerbated by potential debt defaults by Huarong Asset Management

and real-estate developer Evergrande, which kept investors on tenterhooks. Focus fell on sizeable mainland credits that were most susceptible to the adverse regulatory changes that could upset the status quo and cause a potential spill-over impact on the broader economy. In September, Evergrande missed its debt repayments for two of its offshore bond issues. Subsequently, regulators intervened by restructuring the company so that Evergrande could remain a going concern that could ultimately deliver finished apartment units to its customers, as well as pay its vendors. On a more positive note, Huarong announced a state-backed rescue plan led by Citic Group. This ended months of uncertainty over its finances. The company had warned of 103 billion yuan (US\$15.9 billion) in losses for 2020. These two events had been well telegraphed however, with the political leaders signalling that defaults would rise, especially among local state-owned companies earlier in the year. The central government had decided that it would foreshadow these developments in a bid to improve risk-pricing and eliminate moral hazard.

Portfolio review

Over the review period, the value of China Onshore Bond Fund increased by 8.79%, compared to a 9.97% rise in the benchmark, the FTSE Chinese Government Bond Index 1–10 Years in US-dollar terms. Our off-benchmark credit position and currency contributed well to performance. Duration contribution was small overall due to heightened volatility in the market over the 12-month period.

Outlook

In recent months, the growth momentum had eased on rising Covid-19 cases that restrict some mobility but the main reason would be the tight credit policies introduced by the central government. In addition, the property sector remains under pressure, not only because of Evergrande's debt debacle but also the slowdown induced by greater regulatory scrutiny in the sector. More broadly, the central government is promoting the "common prosperity" agenda, and has tilted towards its objective of attaining greater social equality and it has done so by imposing more controls across various sectors. Overall, this is likely to continue hurting sentiment. However, the pendulum may have swung and reached a turning point, and we could potentially see the authorities could start to loosen policy again. Meanwhile, we believe we have yet to hit the bottom of the economic cycle and the yield curve is expected to glide lower from current levels. We also think the room for RMB to appreciate against US dollar to be smaller now after the strong rally in the past 12 months.

Climate Transition Bond Fund

For the period ended 30 September 2021

Commencement of Fund

The CSSF approved the Fund for launch on 5 May 2021.

The first net asset value (NAV) calculation for the Fund was on 14 June 2021.

Performance

For the period from 14 June 2021 to 30 September 2021, the value of the Climate Transition Bond Fund – I Accumulation shares increased by 0.26% compared to an increase of 0.42% in the benchmark, the 60% Bloomberg Barclays Global Aggregate Corporates Index (Hdgd to USD), 20% Bloomberg Barclays Global HY Corps Index (Hdgd to USD), 20% JP Morgan Corp Emg Mkt Bond Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Benchmark return: Source: Lipper, Basis: close of business return, income reinvested, gross of expenses, USD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Aided by continued reopening, economic growth in both the US and Europe was strong over the period. However, inflationary pressures and ongoing supply issues remained a source of concern. On 22 September, the US Federal Reserve (Fed) announced it would soon begin slowing the pace of its asset buying, with purchases set to end around the middle of next year. As expected, on 9 September, the European Central Bank also announced a reduction in the pace of its asset purchases. However, in contrast to the US, interest rate rises in Europe are still widely seen as a much more distant prospect.

High yield bonds outperformed investment grade issues, in aggregate, as corporate fundamentals benefit from economic tailwinds. Emerging market debt fell, as a weaker market environment followed renewed concerns over the outlook for US monetary policy, a slowing Chinese economy and Evergrande's debt crisis.

Portfolio review

In terms of individual holdings, the corporate hybrid bond of MAF Global Securities performed well. MAF finances, develops and operates sustainable and resilient communities across the Middle East and North African (MENA) region. It was the first company in the MENA region to commit to carbon and water neutrality for its own operations by 2030, as well as for its tenants and developments by 2040.

Also in the Middle East, our investment in Tabreed's 2027 bond also performed well over the period. Tabreed is one of the pioneers of (large scale) district cooling, which is 50% more energy efficient than conventional air conditioning. The company has contributed to a significant reduction in cooling-related emissions in the region. In the emerging markets public transportation sector, we benefitted from holding the 2034 bonds of the Lima Metro, the 2028 bonds of Georgian Railway, and the 2030 bond of Metro de Santiago.

On the downside, negative news flow out of China regarding the financial health of the property developer Evergrande weighed on the broader Chinese property sector. This led to negative contributions from our holding in Shui On Group. Go-Ahead lagged, as the company lost its London & South Eastern Railway franchise. In the Latin American region, Brazilian paper manufacturer Suzano and Chile's Inversiones CMPC also weighed on performance.

In our engagement programme, we met with Clean Harbors, a waste management company operating in the US, which the Fund holds. We asked them about the transition to electric vehicles (EVs), because Clean Harbors is currently involved in the collection and refinement of used motor oil, enabling the circular economy. The company outlined how they will play a significant role in the transition to EVs through potential collection and disposal of batteries, remediating infrastructure and providing bridge technologies, including re-refined motor oil. Overall, Clean Harbors remains a strong ESG story, as the company continues to focus on eliminating hazardous material from entering the environment through capture, storage and incineration technologies. We also spoke about issues we have placed on review, such as Great Lakes Dredge and Dock, to gain more assurance around how they mitigate environmental impacts, such as disturbing marine biodiversity. The company provided us with technical details of their processes to minimise impact to the sea floor, as well as how potential beach sites are inspected and assessed. We were impressed with the examples that the company provided and where they had made changes to procedures due to environmental assessment outcomes. As a result, we have approved the issuer.

Outlook

Credit markets have enjoyed an extended period of low volatility and stable credit spreads over the summer as strong technicals, coupled with economic recovery, have provided a near perfect backdrop. While we remain constructive overall on credit, we think we are entering a period of higher volatility compared to the summer. This is driven by a combination of peaking growth and

Climate Transition Bond Fund

Continued

higher inflation rates, as well as China slowing more than expected, partly due to stresses in its property sector. In addition, while well flagged, the tapering of the US Fed's asset purchases and the expected reduction in fiscal spending across the developed world, as Covid-19 support measures are phased out, will become headwinds for the market. This is somewhat countered by high savings rates among corporates and consumers, which should counterbalance the fiscal drag. We should get more clarity on the state of the US consumer when JPMorgan, banking barometer of consumer health, reports third quarter earnings on 13 October, followed by more money centres the next day. Furthermore, with more than US\$1.2 trillion debt issued in the US market in the year-to-date, we expect supply dropping in October, as earnings begin, to be a positive technical support for US credit. We also note the latest positive news of a potentially effective new oral drug for Covid-19 developed by Merck, which would support further normalisation of the public health crisis over time.

Diversified Growth Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of Diversified Growth – A Accumulation Shares increased by 13.94% compared to an increase of 3.95% in the benchmark, Euribor 1 Month +4.50%

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, EUR.

Benchmark return: Source: BNP Paribas, Basis: close of business return, income reinvested, gross of expenses, EUR.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Most risk assets performed well during throughout the year but continued to experience periods of heightened volatility. Listed equities produced a particularly strong return with valuations increasing over the period and company earnings surprising to the upside. This reflected the strength of the economic rebound, continued monetary and fiscal stimulus support, the lifting of lockdown restrictions and good progress on vaccine rollout in many economies globally.

Emerging Market (EM) local currency bonds produced a more modest return during the year as investors considered the impact of Covid-19 on Emerging Markets as well as how EM central banks would respond to rising inflationary pressures in the short-term. In other areas of fixed income, corporate credit spreads continued to decline while defaults remained muted despite the level of economic disruption. It was a similar story for asset-backed securities where prices continued to recover reflecting supportive underlying credit performance.

Elsewhere, asset classes such as infrastructure and specialist property produced stable returns reflecting resilient underlying asset valuations and income generation despite the ongoing pandemic.

Portfolio review

The main asset allocation changes were additions to local currency EM bonds, listed equity and private equity on valuation grounds. These additions were funded from the complete sale of our exposure to US high yield and investment grade credit and reductions in our allocations to special opportunities, asset-backed securities and infrastructure.

Within infrastructure we initiated new positions in Cordiant Digital Infrastructure and SDCL Energy Efficiency and also took part in several capital raises from existing infrastructure companies, taking advantage of the

attractive pricing of these raises. This was offset by selling out of our investment in John Laing Group which was subject to a bid from private equity at a material premium to the prevailing share price and NAV.

Within property, we initiated new positions in Primary Health Properties, a UK REIT that owns primary care properties, logistics asset owner Urban Logistics REIT and re-initiated a position in Target Healthcare, which invests in modern, purpose-built care homes. We also participated in capital raises by Target Healthcare REIT, Tritax Big Box REIT and Home REIT. On the other side, we reduced our exposure to a number of our global REIT positions.

Lastly, within special opportunities we sold our remaining position in Alternative Credit Investments. Following a lengthy takeover bid from Waterfall Asset Management, the shares were trading close to the bid price that we believed would succeed. Offsetting this sale were new positions in Round Hill Music which owns a growing portfolio of music royalties and two precious metals royalty companies, Franco Nevada and Wheaton Precious Metals.

Outlook

Both the short-term and long-term outlook for economies is particularly uncertain at the moment. Our central view is that the initial rebound in global economic growth has reached its peak, and the underlying pace of recovery will slow from here. That said, our forecasts are still for several years of above trend global growth as the world economy remains in a recovery stage of the cycle, but divergence and downside risks have become more prevalent. The near-term strength of demand amid an array of supply bottlenecks is generating a period of higher inflation. Although we expect this to be largely transitory, there will be meaningful divergences across countries and sectors which in some cases may prove challenging for central banks to ignore.

While this central economic backdrop is largely supportive for equities and other risk assets, we believe much of this is reflected in current valuations. There are also a wide range of other scenarios that could play out, many of which could lead to extreme returns. Hence our cautiously positive view on equities. The outlook for government and investment grade bonds is less positive in our view.

We continue to see compelling return prospects in a number of alternative asset classes including infrastructure assets, asset-backed securities, certain property investments and a variety of special opportunities such as healthcare royalties, litigation finance and music royalties.

Diversified Income Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of Diversified Income – A Income shares increased by 13.86%. The Fund does not have an official benchmark.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Most risk assets performed well during throughout the year but continued to experience periods of heightened volatility. Listed equities produced a particularly strong return with valuations increasing over the period and company earnings surprising to the upside. This reflected the strength of the economic rebound, continued monetary and fiscal stimulus support, the lifting of lockdown restrictions and good progress on vaccine rollout in many economies globally.

Emerging Market (EM) local currency bonds produced a more modest return during the year as investors considered the impact of Covid-19 on Emerging Markets as well as how EM central banks would respond to rising inflationary pressures in the short-term. In other areas of fixed income, corporate credit spreads continued to decline while defaults remained muted despite the level of economic disruption. It was a similar story for asset-backed securities where prices continued to recover reflecting supportive underlying credit performance.

Elsewhere, asset classes such as infrastructure and specialist property produced stable returns reflecting resilient underlying asset valuations and income generation despite the ongoing pandemic.

Portfolio review

The main asset allocation changes were additions to local currency EM bonds, listed equity and private equity on valuation grounds. These additions were funded from the complete sale of our exposure to US high yield and investment grade credit and reductions in our allocations to special opportunities, asset-backed securities and infrastructure.

Within infrastructure we initiated new positions in Cordiant Digital Infrastructure and SDCL Energy Efficiency and also took part in several capital raises from existing infrastructure companies, taking advantage of the attractive pricing of these raises. This was offset by selling out of our investment in John Laing Group which was

subject to a bid from private equity at a material premium to the prevailing share price and NAV.

Within property, we initiated new positions in Primary Health Properties, a UK REIT that owns primary care properties, logistics asset owner Urban Logistics REIT and re-initiated a position in Target Healthcare, which invests in modern, purpose-built care homes. We also participated in capital raises by Target Healthcare REIT, Tritax Big Box REIT and Home REIT. On the other side, we reduced our exposure to a number of our global REIT positions.

Lastly, within special opportunities we sold our remaining position in Alternative Credit Investments. Following a lengthy takeover bid from Waterfall Asset Management, the shares were trading close to the bid price that we believed would succeed. Offsetting this sale were new positions in Round Hill Music which owns a growing portfolio of music royalties and two precious metals royalty companies, Franco Nevada and Wheaton Precious Metals.

Outlook

Both the short-term and long-term outlook for economies is particularly uncertain at the moment. Our central view is that the initial rebound in global economic growth has reached its peak, and the underlying pace of recovery will slow from here. That said, our forecasts are still for several years of above trend global growth as the world economy remains in a recovery stage of the cycle, but divergence and downside risks have become more prevalent. The near-term strength of demand amid an array of supply bottlenecks is generating a period of higher inflation. Although we expect this to be largely transitory, there will be meaningful divergences across countries and sectors which in some cases may prove challenging for central banks to ignore.

While this central economic backdrop is largely supportive for equities and other risk assets, we believe much of this is reflected in current valuations. There are also a wide range of other scenarios that could play out, many of which could lead to extreme returns. Hence our cautiously positive view on equities. The outlook for government and investment grade bonds is less positive in our view.

We continue to see compelling return prospects in a number of alternative asset classes including infrastructure assets, asset-backed securities, certain property investments and a variety of special opportunities such as healthcare royalties, litigation finance and music royalties.

Market review

Eastern European equities rose sharply in euro terms in the 12 months ended September 2021, much faster than the broader global emerging markets asset class.

Energy stocks advanced to record levels as oil and gas prices rose to multi-year highs due to low near-term global supplies, the easing of travel restrictions and post-pandemic economic activity. Also, financial stocks recovered, having been pressured earlier in the pandemic by concerns that the heightened credit risk amid a low-interest rate environment would hurt lenders' profits. These developments were highly favourable for stocks that made up the bulk of the Russian benchmark index; namely, energy and materials, as well as banks.

While Turkey's stock market also advanced, share prices were capped by concerns over the government's ability to rein in currency volatility amid persistent inflationary pressures. After replacing top monetary policy officials, the central bank unexpectedly reversed its austerity measures and slashed the benchmark repo rate by a full percentage point. Investors were dismayed at the country's weak political will in defending the lira, which sank to a new low. This exacerbated runaway inflation and hurt household consumption. On a positive note, a landmark free-trade agreement was struck with the UK, its second-largest trading partner.

In Russia, the central bank began to raise interest rates in the second half of the review period to restrain inflationary pressures. In matters related to sustainable development, the Kremlin approved a programme that will increase the country's liquefied natural gas (LNG) output by three to fivefold in 15 years. Moscow launched a new initiative to promote electric vehicle sales and the development of related infrastructure. It is also raising mineral extraction tax on metals producers next year.

Meanwhile, Poland's government unveiled a plan to revive the pandemic-hit economy which will tap into the European Union's recovery fund. The proposal's inclusion of personal tax cuts for low and middle income-earners was positive for consumer confidence. A housing programme, as well as road and rail investments, will also boost construction, materials and real estate demand.

In economic news, the GDP forecasts for Russia, Turkey and Poland were upgraded.

Portfolio review

The Fund rose sharply, closely trailing stellar benchmark gains. The underweight to Gazprom proved costly amid an energy boom. On a positive note, holding Novatek benefited from soaring European gas prices, given its exposure to spot LNG cargoes. Investors also expected better valuation of future LNG projects to propel Novatek's growth.

At a country level, the good absolute performance was driven by stock selection in Russia and Turkey, as well as our off-benchmark holdings in Kazakhstan, Romania and Slovenia. The underweight to Poland also proved prudent as its banking sector remained embroiled in issues with legacy foreign currency loans.

The main contributor was a longstanding investment in Russian vodka distillery and retail chain Beluga. Despite investors' rotation out of defensive staples, shares in the off-benchmark small-cap holding rose on a sharp re-rating. The off-benchmark holding generated stellar profit growth last year, helped by broader categories of spirits and wines. It also established a highly successful direct retail footprint. More recently, the position added to performance on news of a buyout offer to a comparable peer. This constituted a positive read-across for Beluga's valuation. Conversely, the share price of food retailer X5 and Polish delivery company InPost succumbed to profit-taking.

Another contributor was Headhunter, with sharp earnings growth underpinned by a good job market and acquisitions of subsidiaries. On the environment, social and governance (ESG) front, the company's free services to job seekers in poorer regions is aligned to the United Nations' sustainable development goal of inclusive

Eastern European Equity Fund

Continued

employment and decent work for all. The company has a sizeable presence outside Metropolitan Russia and across the Commonwealth of Independent States, where unemployment rates are higher than OECD averages.

In Turkey, avoiding Bim Birlesik boosted performance as the discount retailer suffered from higher costs of imported merchandise. In Kazakhstan, fintech firm Kaspi supported the Fund with good results. In Romania, our off-benchmark technology services holdings Endava supported the Fund on the back of an acceleration in digital solutions. In Slovenia, NLB Group posted good profits, driven by resilient operations, its acquisition of a Macedonian bank and significant write-backs of provisions.

During the second half of the review period, we initiated Russia's leading forestry group, Segezha. The company has favourable cost dynamics, helped by ample forestry resources, long term leases and relatively low labour and fuel costs. Another key portfolio change was to introduce Ozon, a leading e-commerce player in Russia.

Against these, we exited Turkcell due to concerns over the macro-economic situation in Turkey. Elsewhere, we ended the position in Jeronimo Martins due to longstanding concerns about their Colombian business. We also divested Tatneft to fund better opportunities elsewhere. Please refer to the interim report for more information about portfolio changes.

Outlook

The outlook for Eastern European equities remains bright as the reopening of the global economy and domestic vaccine rollouts stimulate economic recovery across the region and support higher commodity prices for longer. Cyclical economic gains are being better distributed across economies such as Russia's, and fostering growth of new industries which offer rich potential to active investors.

All these events have led investors to return to riskier assets, and we are seeing a rotation from growth stocks into more cyclical stocks. Eastern Europe is an attractive play on this rotation, while the Fund adds compelling long-term quality growth characteristics and downside protection. However uncertainty lingers over the future of US-Russia relations under President Joe Biden. Likewise over the sustainability of Turkey's commitment to monetary policy orthodoxy following another change in its central bank governor.

Nevertheless, the region offers an increasingly diverse range of high-quality companies and structural growth drivers. These include global tech leaders supported by exceptional software development talent and an emerging middle class with rising wealth levels. Moreover, Eastern European stocks continue to trade at discounted valuations relative to the broader asset class. The region's principal

market, Russia, continues to be the highest-yielding equity market across emerging markets. With this in mind, we will continue to use our bottom-up stock-picking expertise to identify quality companies with good fundamentals and at reasonable valuations to enhance the portfolio. By sticking to our disciplined approach, we expect our holdings to deliver sustainable returns.

Emerging Markets Bond Fixed Maturity 2023 Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of Emerging Markets Bond Fixed Maturity 2023 – Accumulation Shares increased by 4.64%. The Fund does not have an official benchmark.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Emerging market (EM) corporate debt returns were positive over the period. Although the market saw increased volatility at the beginning, momentum quickly turned positive following the relatively smooth US elections. Following this, there were multiple successful Covid-19 vaccine trials and the passing of a new US\$900 billion stimulus bill. This supported EMs, even during a second wave of Covid-19 infections that caused many countries to reinstate lockdown measures. This strong momentum fizzled out at the beginning of 2021 amid increased economic uncertainty and vaccine rollout challenges. However, risk assets began to climb again in February, driven by higher commodity prices, stronger inflation prospects, positive vaccine sentiment and the passing of the US\$1.9 trillion Covid-19 relief package.

Despite the spread of the more transmissible Delta variant of Covid-19, risk sentiment continued to improve in the second half of the period, as strong vaccination progress – particularly in the developed world – led to economic reopenings and increased optimism for a global economic recovery. In the final three months of the period, US Treasury yields were volatile due to reduced US Treasury issuance and tapering comments from US Federal Reserve (Fed) Chair Jerome Powell. In September, the Fed announced it would begin to slow the pace of its asset purchases – now projected to come to an end in 2022. Oil prices were also volatile, with the Brent crude oil price ending the period at US\$77.81 per barrel. Vaccine optimism, widespread supply disruption and falling inventories combined to support the rising oil price.

Portfolio review

Over the period, some of the best-performing holdings were Chinese companies, including China Haohua Chemical Group, China Poly Group, Sunny and Logan Group. The 2022 and 2023 bonds of China Huarong International Holdings also contributed to performance. However, some of our Chinese holdings were the largest detractors to returns, notably property developers Scenery

Journey (a subsidiary of Evergrande), Sunac and Kasia Group. The latter two were caught up in the volatility and uncertainty triggered concerns about debt-ridden Evergrande, one of China's largest property developers, with the firm missing several bond payment deadlines at the end of the period. Other detractors included Emirates Real Estate Investment Trust and Kuwait Projects.

Early in the period, we carried out a Chinese property switch from Zhenro Properties to Kaisa Group as a relative-value trade to get a significant pick-up in yield. Bonds from India-based ReNew Power and the Nigerian oil and gas company Seplat were tendered and rolled into Turkish bank Yapi Kredi seniors and microfinance company India Infoline. We also switched Chinese property company Shimao into Russian bank Sberbank and sold positions with Russian multinational energy corporation Lukoil. We later trimmed our positions in Turkish bank YapiKredi and Saudi property company Dar Al-Arkan and topped up in Sberbank and Turkish white goods manufacturer Arcelik. Towards the end of the period, we sold out of Abu Dhabi Commercial Bank and added a position in AES El Salvador, a utilities provider. We added to our China exposure via Huarong, and also bought Ukraine Railways and Ecopetrol, the Colombian oil company.

Outlook

EM assets continue to benefit from the global economic recovery and accommodative fiscal policies, especially since the risk of prolonged lockdowns has diminished as the global vaccine rollout accelerates. Financing needs should remain contained for many EM economies, where better-than-expected growth in the first half of the year led to robust revenue growth. Meanwhile, the recent International Monetary Fund special drawing rights allocation has also boosted reserves. While inflation has been high across the globe, EM central banks have responded with orthodox monetary policy – by raising interest rates – and seem to be ahead of the curve compared with developed market policymakers. The risks to our outlook remain a hawkish Fed leading to rising US Treasury yields and sustained US dollar strength. A more pronounced slowdown in China would also weigh on commodity prices and sour sentiment. Lastly, vaccine inefficacy against new Covid-19 variants, which delays economic reopenings and engenders social unrest, is also a risk to our outlook.

Emerging Markets Corporate Bond Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of Emerging Markets Corporate Bond – A Accumulation shares increased by 6.40% compared to an increase of 6.03% in the benchmark, the JP Morgan CEMBI Broad Diversified TR Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Benchmark return: Source: JP Morgan, Basis: close of business return, income reinvested, gross of expenses, USD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Emerging market (EM) corporate debt rose in value over the period. Although the market saw increased volatility at the beginning, momentum quickly turned positive following the relatively smooth US elections. Following this, there were multiple successful Covid-19 vaccine trials and the passing of a new US\$900 billion stimulus bill. This supported EMs, even during a second wave of Covid-19 infections that caused many countries to reinstate lockdown measures. This strong momentum fizzled out at the beginning of 2021 amid increased economic uncertainty and vaccine rollout challenges. However, risk assets began to climb again in February, driven by higher commodity prices, stronger inflation prospects, positive vaccine sentiment and the passing of the US\$1.9 trillion Covid-19 relief package.

Despite the spread of the more transmissible Delta variant of Covid-19, risk sentiment continued to improve in the second half of the period, as strong vaccination progress – particularly in the developed world – led to economic reopenings and increased optimism for a global economic recovery. In the final three months of the period, US Treasury yields were volatile due to reduced US Treasury issuance and tapering comments from US Federal Reserve (Fed) Chair Jerome Powell. In September, the Fed announced it would begin to slow the pace of its asset purchases – now projected to come to an end in 2022. Oil prices were also volatile, with the Brent crude oil price ending the period at US\$77.81 per barrel. Vaccine optimism, widespread supply disruption and falling inventories combined to support the rising oil price.

Portfolio review

The Fund's allocation and security selection effects both proved positive for performance. The main drivers of performance were security selection in Mexico, Brazil, Russia and Singapore. Overweight positions (versus the benchmark) in Ukraine and Ecuador, an underweight holding in Thailand and a lack of exposure to Hong Kong and South Korea also helped returns. Conversely, the largest detractor from returns was the Fund's cash allocation, with the exchange-traded fund/supranational holdings also weighing a little. Security selection in Argentina, China and Indonesia hurt performance. The Fund's allocation to Ghana, a lack of exposure in Jamaica and an underweight position in Turkey were further detractors.

In terms of portfolio activity, early in the period we switched into shorter-dated bonds in Brazilian protein company BRF as we looked to reduce Brazil duration. We participated in several new issues, including First Bank of Nigeria, KazMunayGas, Galaxy Pipeline Assets Bidco (the United Arab Emirates corporate), Singaporean aviation firm BOC Aviation and Mexico-based chemical producer Orbia, among others. Other notable trades included reducing risk in Banco GNB Sudameris and increasing our exposure to telecommunications company Omantel. We also took part in a new issue from Brazilian beef producer Marfrig Global Foods, with the company benefiting from strong US demand and a weaker Brazilian real. In March, in a bid to reduce duration, we switched our longer-dated positions in Pemex to shorter-dated positions.

In the second half of the period, the Fund participated in a new green bond issue from Interchile. The company owns a portfolio of 11 transmission projects, some of which are critical for Chile's decarbonisation goal of transporting the renewable energy produced in the north of the country to the largest cities. Demand for the bonds was very strong, and we took profit more than five points above the issue price. We also added to the Chinese property sector after the sell-off in August by increasing exposure to property developer Yango Group.

Outlook

EM assets continue to benefit from the global economic recovery and accommodative fiscal policies, especially since the risk of prolonged lockdowns has diminished as the global vaccine rollout accelerates. Financing needs should remain contained for many EM economies, where better-than-expected growth in the first half of the year led to robust revenue growth. Meanwhile, the recent

Emerging Markets Corporate Bond Fund

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Global emerging markets equities advanced over the 12 months to September 2021.

Share prices initially rose sharply on cheer over the vaccine rollout which allowed the re-opening of economies worldwide. Corporate earnings were driven by an e-commerce boom, a multi-year technology upgrading cycle and pent-up infrastructure demand. Increasing adoption of climate change goals by governments also fuelled interest in clean energy themes. Investors brushed aside concerns over supply chain disruptions caused by a shortage in semiconductors, shipping gridlocks and an energy crunch. Conversely, the spread of the more contagious Delta variant of Covid-19 capped the stock market gains in some emerging economies due to their relatively slow vaccine rollouts.

All major emerging markets posted healthy gains except China, where Beijing's effort to promote 'common prosperity' led to a tough regulatory environment for some business models. Chinese equities fell as the country's leadership called into accountability sustainable development issues. These ranged from excessive real estate debt, the high cost of living, education, gaming, worker welfare, technology giants' antitrust and data privacy practices to climate change.

Despite a deadly resurgence of Covid-19 in India which later retreated, its stock market reached an all-time

high. Sentiment was buoyed by New Delhi's pro-business policies that exceeded expectations and a sustained corporate earnings recovery. Taiwanese and South Korean companies also did well, given their dominance in the electronics supply chain.

In Latin America and Russia, investors cheered the commodities boom and hoped that massive fiscal stimulus in the US will further boost the region's exports. On the policy front, the central banks in Brazil, Mexico and Russia began to hike interest rates to control inflationary pressures.

Portfolio review

The Fund beat its benchmark. Good stock selection in technology, retailing and banks drove returns but the positions in transportation, materials and utilities disappointed. Our exposures in China were the main contributors, and the Netherlands, South Korea, Brazil and Russia added to the good performance. Conversely, stock selection in South Africa and the underweight to Taiwan dented returns.

Given the global chip shortage, demand for foundry operations boosted our exposures to leading semiconductor names, Samsung Electronics, ASML and Taiwan Semiconductor Manufacturing Co.

In China, our positions in leading power grid company Nari Tech and solar energy name Longi Green Energy boosted returns, thanks to their alignment to national clean energy objectives and recent power constraints. Separately, the share price of Wuxi Biologics, a fast-growing third-party drug developer, rose on contract wins.

Conversely, our holdings in education and gaming, New Oriental Education and Sands China, pared returns as they were in the cross hairs for policy tightening. Regulation in the education sector impaired the investment case for New Oriental to such an extent that we sold the stock following the announced reforms. Shanghai International Airport also detracted due to revisions to its duty-free contract. Holding China Resources Land also proved costly as sentiment on the real estate firm was hurt by concerns over Beijing's financing curbs.

In Russia, Novatek benefited from exposure to soaring spot energy prices and expectations for better valuation of liquefied natural gas (LNG) projects, which form the bedrock of the company's future growth. In Brazil, e-commerce platform Mercadolibre added to the gains. Meanwhile, surging iron ore prices made Vale one of the top contributors, whereas South African miner Anglo American Platinum detracted; investors fretted about the current cycle peaking for platinum-group metals, which in the long term will be vital in underpinning the growth of the hydrogen economy.

Emerging Markets Equity Fund

Continued

Besides the key portfolio activity mentioned in the interim report, we initiated ASM International, GDS, Kakao Corp, B3 and TCS Group. ASM International is a leading supplier of semiconductor wafer equipment that benefits from the accelerating adoption of 5G, cloud computing, artificial intelligence and the Internet of Things. GDS is among China's leading providers of high-performance internet data centres. We think GDS is well-placed to benefit from policies supporting cloud adoption in China. Kakao Corp is a leading South Korean internet platform. Stock exchange operator B3 offers attractive exposure to Brazil's rising capital markets penetration. TCS is Russia's leading innovative fintech player.

Against these, we exited Ayala Land, New Oriental Education, Xinjiang Goldwind and Shanghai International Airport. We also exited Naspers following recent corporate action which saw the majority of our holding exchanged for Prosus shares. We believe that Prosus offers a more attractive valuation opportunity to access the portfolio of technology businesses owned by the group, including Tencent.

Outlook

Despite China's regulatory agenda related to social equality, data security and environmental sustainability, we believe that Beijing remains pro-innovation and, in the long term, a greater focus on social equality should put the economy on a more sustainable footing. It is a similar story with the shift in the country's growth model to have less reliance on the property sector. We also believe the global economic recovery is supported by accelerating vaccination rates that allow an easing of mobility restrictions. This should mitigate the pockets of inflationary pressure in parts of emerging markets tied to rising energy prices and near-term supply chain disruptions. With central banks across emerging markets on the front foot, and external balances mostly in good shape, we view the risks associated with Fed tapering as manageable for most of the asset class.

Valuations in emerging markets are now looking more supportive and, as stock pickers, we remain focused on attractively valued companies with pricing power and sustainable economic moats that drive long-term returns. The asset class remains attractive due to the diversity of high-quality companies underpinned by structural growth drivers, including healthy demographics, a growing middle class and relatively undemanding valuations. By sticking to our disciplined, bottom-up approach, we expect our holdings to deliver sustainable returns to shareholders over the longer term.

Emerging Markets Infrastructure Equity Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of Emerging Markets Infrastructure Equity – S Accumulation Shares increased by 14.20% compared to an increase of 7.18% in the benchmark, the MSCI Emerging Markets Infrastructure TR Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Benchmark return: Source: RIMES, Basis: close of business return, income reinvested, gross of expenses, USD.

Market review

Infrastructure-linked emerging market stocks rose over the year under review, but the increase was more modest than the broader emerging-market universe. Much of this divergence was due to the benchmark's exposure to China, where a series of negative developments triggered sell-offs. More broadly, hopes of a global recovery, underpinned by worldwide vaccine rollouts and economic reopenings, supported sentiment. Rebounding corporate earnings, rallying commodity prices and positive infrastructure policy developments in some key markets, notably India, further boosted the segment. However, the US Federal Reserve's more hawkish tone, alongside niggling worries about inflation, capped gains.

Across markets, China fell the most as Beijing ramped up regulatory scrutiny over several sectors. Notably, education shares there tumbled after the authorities unveiled stricter guidelines. The policy changes went beyond what was expected, and we exited our holdings, New Oriental Education and TAL Education. That said, we believe that a wholesale clampdown seems unlikely, given China's vision of a modern, consumption-led economy. Meanwhile, contagion risks arising from property major Evergrande's unresolved debt crisis further dampened mainland stocks. Outside China, India fared well, aided by the government's decision to avoid a full lockdown

in response to a deadly wave of Covid-19. New Delhi's plan to lease out state-owned infrastructure assets was also well-received too. In Latin America, robust iron ore prices lifted Brazil, while Mexico rose on a rosier economic outlook amid the prospect of greater US stimulus. However, quickening inflation in both countries compelled their central banks to begin new hiking cycles. South Africa fared well too, thanks to the robust rebound of telecoms major MTN Group.

Portfolio review

The Fund comfortably surpassed the benchmark, with the bulk of the outperformance coming from our stock picks in China. Several of our holdings there, including some recent initiations, boosted returns, particularly those tied to the sustainable development theme. Electric vehicle (EV) battery maker Yunnan Energy New Material was a standout, with its share price surging by over 400%. Optimism over the EV demand outlook, with news of global battery makers expanding capacity, drove the rally. Sungrow Power Supply and Longi Green Energy had good runs as they benefited from a bright long-term outlook for solar modules, tied to the country's net-zero targets. Nari Technology's shares rose too as power cuts highlighted the urgency of upgrading the country's power grid, coupled with the push towards renewables.

Our exposure to Russia also added to performance, thanks to the position in MD Medical. Investors reacted well to its shift in strategy to grow higher-margin treatments, instead of building new hospitals.

Elsewhere, India had a mixed impact on the Fund. Holding utilities company Gujarat Gas was positive, as network expansion in new Indian cities, due to stricter pollution curbs, bolstered volumes and unit margins. Fortis Healthcare added to returns too, thanks to a pickup in earnings that showed improving margins from its diagnostics services segment. However, these gains failed to mitigate the negative impact of not holding Bharti Airtel. Its shares rallied after the government approved a relief package for the telecom sector and news of price hikes for the company's mobile plans. We retain concerns about the challenges facing India's telecoms sector, but will monitor developments.

Conversely, the exposure to Brazil and Saudi Arabia exposures detracted. In Brazil, smaller-cap growth stocks sold off as investors favoured more liquid names, which hurt newly-added online education provider Arco Platform. Meanwhile, not holding benchmark heavyweight Saudi Telecom proved costly as reports that it had secured a digital-banking licence propelled its shares higher. Our overall exposure to telecoms was another source of weakness. Besides Bharti Airtel and Saudi Telecom, not holding Emirates Telecom and Telekomunikasi Indonesia was negative too.

Emerging Markets Infrastructure Equity Fund

Continued

China accounted for the bulk of portfolio changes over the year. The market fluctuations there presented us with opportunities to exit certain names, while establishing positions in others that we had eyed for some time. In addition to selling New Oriental Education and TAL Education, we exited China Resources Land and KE Holdings on concerns about policy tightening in the property sector. We also divested Shanghai International Airport and Beijing Sinnet Technology. Conversely, we bought Nari Technology and Sungrow, as noted above, and also initiated leading internet data centre operator 21 Vianet and high-quality property management firm Ever Sunshine Lifestyle.

Brazil was the other market of focus. We not only initiated Arco Platform, but also promising hospital chain Rede D'or, rail logistics company Rumo and e-commerce logistics provider Sequoia. Against these, we exited car rental business Localiza.

Elsewhere, we began investing in Hong Kong-based shipping logistics company SITC. We made two Korean additions, including global tech giant Samsung Electronics and chip-testing company Leeno. In India, we bought Azure Solar Power Global, a top solar-farm operators with attractive growth prospects. We also introduced miner Grupo Mexico, as a cheaper proxy to its unit Southern Copper, which is among the world's leading copper producers. Within the EMEA region, we established positions in Polish e-commerce logistics provider InPost and Turkish mobile operator Turkcell. Against these, we sold lower conviction holdings, including Thailand's Advanced Info Services and Enel Americas.

Outlook

Despite China's regulatory agenda related to social equality, data security and environmental sustainability, we believe that Beijing remains pro-innovation and in the long term a greater focus on social equality should put the economy on a more sustainable footing. We also believe the global economic recovery is supported by accelerating vaccination rates that allow an easing of mobility restrictions. This should mitigate inflationary pressures tied to rising commodity prices and near-term supply chain disruptions.

The rotation from growth stocks into more cyclical and value-oriented ones has receded somewhat and we expect emerging market investors to look to the recovery in global infrastructure and clean energy spending while retaining an eye to value and inflation beneficiaries.

As stock pickers, we remain focused on companies with pricing power and sustainable economic moats that drive long term returns. The asset class remains attractive due to the diversity of high-quality companies and structural

growth drivers, including healthy demographics, a growing middle class and relatively undemanding valuations. By sticking to our disciplined, bottom-up approach, we expect our holdings to deliver sustainable returns to shareholders over the longer term.

Emerging Markets Local Currency Bond Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of Emerging Markets Local Currency Bond – A Accumulation Shares increased by 3.06% compared to an increase of 2.63% in the benchmark, the JP Morgan GBI EM Global Diversified TR Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Benchmark return: Source: JP Morgan, Basis: close of business return, income reinvested, gross of expenses, USD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Emerging market (EM) debt returns were positive over the period. Although the market saw increased volatility at the beginning, momentum quickly turned positive following the relatively smooth US elections. Following this, there were multiple successful Covid-19 vaccine trials and the passing of a new US\$900 billion stimulus bill. This supported EMs, even during a second wave of Covid-19 infections that caused many countries to reinstate lockdown measures. This strong momentum fizzled out at the beginning of 2021 amid increased economic uncertainty and vaccine rollout challenges. However, risk assets began to climb again in February, driven by higher commodity prices, stronger inflation prospects, positive vaccine sentiment and the passing of the US\$1.9 trillion Covid-19 relief package.

Despite the spread of the more transmissible Delta variant of Covid-19, risk sentiment continued to improve in the second half of the period, as strong vaccination progress – particularly in the developed world – led to economic reopenings and increased optimism for a global economic recovery. In the final three months of the period, US Treasury yields were volatile due to reduced US Treasury issuance and tapering comments from US Federal Reserve (Fed) Chair Jerome Powell. In September, the Fed announced it would begin to slow the pace of its asset purchases – now projected to come to an end in 2022. Oil prices were also volatile, with the Brent crude oil price ending the period at US\$77.81 per barrel. Vaccine optimism, widespread supply disruption and falling inventories combined to support the rising oil price.

Portfolio review

Country allocation, security selection and currency exposure were positive for returns. In terms of regions, Eastern Europe was the strongest region, with Poland the best-performing country, mostly due to security selection and exposure to the Polish zloty. A slight underweight

position in Peru and exposure to the Peruvian sol also added to returns, as did off-benchmark positions in India, Ukraine and Egypt and overweight positions in the Czech Republic and South Africa. Security selection in Mexico, Indonesia, Turkey and South Africa and currency exposure to the Colombian peso, Chinese yuan, Czech koruna and Ukrainian hryvnia were further contributors.

On the other side, Latin America was the worst-performing region, with Brazil a particular underperformer. The Fund's overweight position, security selection and exposure to the Brazilian real all detracted from returns. Other notable detractors included an overweight position in Mexico, an underweight position in China and security selection in Colombia. Meanwhile, currency exposure to the South African rand also weighed on performance.

In the first half of the period, we responded to the change in central-bank governor in Turkey by selling our position in the lira to zero. We also focused on reducing the portfolio's duration risk, especially from February onwards. We sold Colombian 30-year bonds, switched to five-year bonds in Mexico and switched out of Indonesian 15-year bonds to 10-year bonds, among other trades. We continued to reduce duration in the second half of the period. This included switching Egyptian 2021 bonds for 2026 bonds, Thai 2032 bonds for 2028 and 2022 bonds, Hungarian 2038 and 2030 bonds for 2022 and 2026 bond and Brazilian 2031 bonds for 2027 bonds. We reduced duration further by selling our Romanian 2034 bonds.

Outlook

EM assets continue to benefit from the global economic recovery and accommodative fiscal policies, especially since the risk of prolonged lockdowns has diminished as the global vaccine rollout accelerates. Financing needs should remain contained for many EM economies, where better-than-expected growth in the first half of the year led to robust revenue growth. Meanwhile, the recent International Monetary Fund special drawing rights allocation has also boosted reserves. While inflation has been high across the globe, EM central banks have responded with orthodox monetary policy – by raising interest rates – and seem to be ahead of the curve compared with developed market policymakers. The risks to our outlook remain a hawkish Fed leading to rising US Treasury yields and sustained US dollar strength. A more pronounced slowdown in China would also weigh on commodity prices and sour sentiment. Lastly, vaccine inefficacy against new Covid-19 variants, which delays economic reopenings and engenders social unrest, is also a risk to our outlook.

Emerging Markets Local Currency Corporate Bond Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of Emerging Markets Local Currency Corporate Bond – A Accumulation Shares increased by 5.32% compared to an increase of 5.26% in the benchmark, the ICE Bank of America Merrill Lynch Diversified Broad Local Emerging Markets Non-Sovereign TR Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Benchmark return: Source: Lipper, Basis: close of business return, income reinvested, gross of expenses, USD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Emerging market (EM) corporate debt rose in value over the period. Although the market saw increased volatility at the beginning, momentum quickly turned positive following the relatively smooth US elections. Following this, there were multiple successful Covid-19 vaccine trials and the passing of a new US\$900 billion stimulus bill. This supported EMs, even during a second wave of Covid-19 infections that caused many countries to reinstate lockdown measures. This strong momentum fizzled out at the beginning of 2021 amid increased economic uncertainty and vaccine rollout challenges. However, risk assets began to climb again in February, driven by higher commodity prices, stronger inflation prospects, positive vaccine sentiment and the passing of the US\$1.9 trillion Covid-19 relief package.

Despite the spread of the more transmissible Delta variant of Covid-19, risk sentiment continued to improve in the second half of the period, as strong vaccination progress – particularly in the developed world – led to economic reopenings and increased optimism for a global economic recovery. In the final three months of the period, US Treasury yields were volatile due to reduced US Treasury issuance and tapering comments from US Federal Reserve (Fed) Chair Jerome Powell. In September, the Fed announced it would begin to slow the pace of its asset purchases – now projected to come to an end in 2022. Oil prices were also volatile, with the Brent crude oil price ending the period at US\$77.81 per barrel. Vaccine optimism, widespread supply disruption and falling inventories combined to support the rising oil price.

Portfolio review

In terms of performance, selection effects and currency exposure were flat, while allocation effects were marginally negative. Latin America was the best-performing region, with strong performance from Mexico and Peru, where an overweight and underweight position, respectively, helped returns. The Fund's currency exposure to the Mexican peso and Peruvian sol also added to returns. Other contributors included security selection in Brazil, Korea and Malaysia, an underweight position in Malaysia, an off-benchmark position in Ukraine and a lack of exposure to Poland.

Conversely, the Middle East was the worst-performing region, mainly attributable to currency exposure to the Qatari riyal. Underweight positions in China and India and an overweight position in Singapore also detracted, as did the Fund's cash allocation. Currency exposure to the Brazilian real, Colombian peso, Indonesian rupiah, Czech koruna and South African rand weighed on returns.

During the period, we bought Eskom, South Africa's state-owned utilities company, and also carried out a switch within Chinese yuan debt from Franshion to Hyundai and CIFI holdings. We also bought Petrobras in US dollars and Qatar National Bank in Turkish lira, while selling Braskem in US dollars.

Outlook

EM assets continue to benefit from the global economic recovery and accommodative fiscal policies, especially since the risk of prolonged lockdowns has diminished as the global vaccine rollout accelerates. Financing needs should remain contained for many EM economies, where better-than-expected growth in the first half of the year led to robust revenue growth. Meanwhile, the recent International Monetary Fund special drawing rights allocation has also boosted reserves. While inflation has been high across the globe, EM central banks have responded with orthodox monetary policy – by raising interest rates – and seem to be ahead of the curve compared with developed market policymakers. The risks to our outlook remain a hawkish Fed leading to rising US Treasury yields and sustained US dollar strength. A more pronounced slowdown in China would also weigh on commodity prices and sour sentiment. Lastly, vaccine inefficacy against new Covid-19 variants, which delays economic reopenings and engenders social unrest, is also a risk to our outlook.

Market review

Emerging markets small cap equities rose sharply over the 12 months to September 2021.

Higher exposure to cyclical and domestic stocks, which continue to benefit from the worldwide re-opening of economies, helped the asset class to perform significantly better than its large-cap counterpart.

Investors cheered the recovery in corporate earnings driven by an e-commerce boom, a multi-year technology upgrading cycle and pent-up infrastructure demand. Sentiment was further buoyed by prospects of a boost to export demand from massive fiscal stimulus in the US. This outweighed worries over slow vaccine rollouts in the region amid the spread of a more contagious Delta coronavirus variant. Investors also brushed aside concerns of supply chain disruptions caused by a shortage in semiconductors, shipping gridlocks and an energy crunch.

Despite a deadly resurgence of Covid-19 in India which later retreated, its stock market reached an all-time high. Share prices were buoyed by New Delhi's pro-business policies that exceeded expectations and a sustained corporate earnings recovery. Taiwanese and South Korean companies also did well, given their dominance in the electronics supply chain.

However, small caps in China pared earlier gains as Beijing's effort to promote 'common prosperity' led to a tougher regulatory environment for some business models.

On the policy front, the Regional Comprehensive Economic Partnership between Southeast Asian countries, China, Japan, South Korea, Australia and New Zealand formed the world's largest free-trade bloc, comprising nearly a third of the global economy. Meanwhile, the central banks in Brazil, Mexico and Russia began to hike interest rates to control inflationary pressures.

Portfolio review

The Fund underperformed its benchmark as stock selection in Brazil and India detracted. Conversely, off-benchmark holdings in Russia, Hong Kong, the Netherlands and Vietnam supported returns.

Our holdings in Brazil performed poorly due to increased macroeconomic concerns and a rising interest rate environment. In particular, investors were wary that Mobly's e-commerce furniture business could face greater competition from brick-and-mortar stores as the economy re-opens. In India, the disappointing performance by Syngene International was mitigated by our exposures to the country's property and technology sectors. Robust housing presales amid a fresh round of mortgage loan rate cuts by India's top lenders boosted property developer Prestige Estates. This also benefited Piramal Enterprises' housing finance business. In the technology sector, Mphasis contributed on the back of robust results and deal wins.

On a positive note, the period's top contributor was Russian distillery and retail chain Beluga, whose market visibility has increased on strong fundamentals and improved liquidity. More recently, its share price rose on news of a buyout offer to a comparable peer. This constituted a positive read-across for Beluga's valuation. In Hong Kong, Pacific Basin Shipping, our marine transportation provider, benefited from a sustained rise in freight rates amid supply gridlocks. In the Netherlands, ASM International, a leading silicon wafer machine manufacturer, was buoyed by strong global demand for advanced semiconductor equipment. In Vietnam, IT conglomerate FPT Corp delivered pleasing results despite an acceleration in Covid-19 cases clouding the country's near-term economic outlook.

Besides the key portfolio activity mentioned in the interim report, we initiated Andes Technology, Alchip, Samsung Engineering, Aptus Value Housing Finance, Regional, KWG, KMC, Yantai Pet Foods and Tongcheng-Elong.

Taiwanese computer chipmaker Andes Technology is among the top three companies globally for RISC-V,

Emerging Markets Smaller Companies Fund

Continued

an open-source instruction set architecture (ISA) that defines the way software 'talks' to a processor. We see RISC-V gaining market share from proprietary x86 ISA used by major players such as Intel and AMD. RISC-V is easier to use and has better power-performance-area attributes for designing processors with compatible software.

Alchip is one of the top integrated circuit (IC) design houses globally. It specialises in artificial intelligence and high-performance computing (AI/HPC), as well as advanced application-specific integrated circuit (ASIC) design. We see Alchip as being well-positioned to benefit from accelerated adoption of these processes by China and US startups, as well as by technology systems consultancies globally.

Samsung Engineering is the largest offshore petrochemical engineering, procurement and construction company in South Korea. The company has close contacts with the Samsung Group, which supports a solid backlog of orders on areas such as renewables, technology and biologics facilities.

Aptus Value Housing Finance is an affordable-housing finance company with a strong foothold in South India. The industry has ample opportunity for growth and Aptus has superior asset quality, loan yields and return ratios. It also has a conservative management team that kept its balance sheet robust throughout its history.

Regional is a lender focused on small and mid-sized companies in North Mexico. The bank is well-positioned to capture the rebound in activity and demand for credit, benefitting from the pick-up in the US economy. Its recently launched digital bank HeyBanco adds a growth angle as the lender starts exploring the retail segment more directly.

KWG is a real estate developer based in Guangzhou, the heart of one of China's key economic clusters. The company has a long record of success in property development and also has exposure to the profitable property management segment. Its land bank in first-tier cities and key economic clusters provides further assurance of future returns.

KMC is a manufacturer of bicycle chains, accessories and parts. The company is at the centre of the electric bicycle secular growth story which is driven by green initiatives promoted by governments and embraced by health-conscious consumers. The addressable market is also increasing in size as the advent of e-bikes fosters ride frequency and widens the market.

Yantai Pet Foods is a long-established Chinese pet foods manufacturer which is now focusing on developing its own brand in a fast-growing but yet fragmented pet industry. The main drivers of the industry include rising pet ownership and demand for premium products.

Tongcheng-Elong is a leading online travel agency in China.

To fund these better opportunities, we exited Maple Leaf Cement, Yanlord Land, 51Job, Kingdee International, Ujjivan Financial Services, Ujjivan Small Finance Bank, Habib Bank, Cleopatra Hospital, Techcombank, Aenza and ASA.

Outlook

We remain cautiously optimistic about the longer-term outlook for emerging markets smaller companies. Despite China's regulatory agenda related to social equality, data security and environmental sustainability, we believe Beijing remains pro-innovation and are looking selectively at opportunities. We also believe the global economic recovery is supported by accelerating vaccination rates that allow an easing of mobility restrictions. This should mitigate inflationary pressures tied to rising commodity prices and near-term supply chain disruptions.

The rotation from growth stocks into more cyclical and value-oriented ones has receded somewhat and we expect emerging markets investors to look to the recovery in global infrastructure and clean energy spending whilst retaining an eye to value and inflation-beneficiaries.

The asset class remains attractive due to the diversity of high-quality companies and structural growth drivers, including healthy demographics and a growing middle class. Smaller companies also offer a wider range of businesses with higher exposure to global and domestic recovery themes away from the pandemic winners that benefited from work-from-home policies and internet platforms. By sticking to our disciplined, bottom-up approach, we expect our holdings to deliver sustainable returns to shareholders over the longer term.

Market review

Global emerging markets equities advanced over the 12 months to September 2021.

Share prices initially rose sharply on optimism over the vaccine rollout which allowed for the re-opening of economies worldwide. Corporate earnings were driven by an e-commerce boom, a multi-year technology upgrading cycle and pent-up infrastructure demand. Increasing adoption of climate change goals by governments also fuelled interest in clean energy themes. Investors brushed aside concerns over supply chain disruptions caused by a shortage in semiconductors, shipping gridlocks and an energy crunch. Conversely, the spread of the more contagious Delta variant of Covid-19 capped stock market gains in some emerging economies due to their relatively slow vaccine rollouts.

All major emerging markets posted healthy gains except China, where Beijing's effort to promote 'common prosperity' led to a tough regulatory environment for some business models. Chinese equities fell as the country's leadership focused on sustainable development issues. These ranged from excessive real estate debt, the high cost of living, education, gaming, worker welfare, technology giants' antitrust and data privacy practices to climate change.

Despite a deadly resurgence of Covid-19 infections in India, which subsequently ebbed, its stock market reached an all-time high. Sentiment was buoyed by New Delhi's pro-business policies that exceeded expectations and a sustained corporate earnings recovery. Taiwanese and South Korean companies also did well, given their dominance in the electronics supply chain.

In Latin America and Russia, investors cheered the commodities boom and hoped that massive fiscal stimulus in the US would further boost the region's exports. On the policy front, central banks in Brazil, Mexico and Russia began to hike interest rates to control inflationary pressures.

Portfolio review

Technology, retailing and financials drove returns, but the positions in transportation and materials disappointed. Our exposures in China were the main contributors, while the Netherlands and South Korea also added to the good performance. Conversely, stock selection in South Africa and the underweight to Taiwan dented returns.

Given the global chip shortage, demand for foundry operations boosted our semiconductor names, Samsung Electronics, ASML and Taiwan Semiconductor Manufacturing Co.

In China, our positions in solar energy name Longi Green Energy lifted returns, thanks to its alignment to national clean energy objectives. Separately, the share price of Wuxi Biologics, a fast-growing third-party drug developer, rose on contract wins.

Conversely, our holding in New Oriental Education hurt returns amid policy tightening. Regulation in the education sector impaired the investment case for New Oriental to such an extent that we sold the stock following the announced reforms. Holding China Resources Land also proved costly as sentiment on the real estate firm was hurt by concerns over Beijing's financing curbs.

Beside the key portfolio activity mentioned in the interim report, we initiated Vitasoy, Kakao Corp, Aegis Logistics, Contemporary Amperex and GDS. Against these, we exited New Oriental Education, Delivery Hero and Grupo Aeroportuario. We also sold Naspers following recent corporate action which saw the majority of our holding exchanged for Prosus shares. We believe that Prosus offers a more attractive valuation opportunity to access the portfolio of technology businesses owned by the group, including Tencent.

Emerging Markets Sustainable and Responsible Investment Equity Fund

Continued

Outlook

Despite China's regulatory agenda related to social equality, data security and environmental sustainability, we believe that Beijing remains pro-innovation and, in the long term, a greater focus on social equality should put the economy on a more sustainable footing. It is a similar story with the shift in the country's growth model to have less reliance on the property sector. We also believe the global economic recovery is supported by accelerating vaccination rates that allow an easing of mobility restrictions. This should mitigate the pockets of inflationary pressure in parts of emerging markets tied to rising energy prices and near-term supply chain disruptions. With central banks across emerging markets on the front foot, and external balances mostly in good shape, we view the risks associated with Fed tapering as manageable for most of the asset class.

Valuations in emerging markets are now looking more supportive and, as stock pickers, we remain focused on attractively valued companies with pricing power and sustainable economic moats that drive long-term returns. The asset class remains attractive due to the diversity of high-quality companies underpinned by structural growth drivers, including healthy demographics, a growing middle class and relatively undemanding valuations. By sticking to our disciplined, bottom-up approach, we expect our holdings to deliver sustainable returns to shareholders over the longer term.

Emerging Markets Sustainable Development Equity Fund

For the year ended 30 September 2021

Commencement of Fund

The CSSF approved the Fund for launch on 3 October 2019.

The first net asset value (NAV) calculation for the Fund was on 9 December 2020.

Performance

For the period from 9 December 2020 to 30 September 2021, the value of Emerging Markets Sustainable Development Equity Fund- A Accumulation Shares increased by 14.39% compared to an increase of 2.02% in the benchmark, the MSCI Emerging Markets TR Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Benchmark return: Source: Lipper, Basis: close of business return, income reinvested, gross of expenses, USD.

The MSCI information may only be used for your internal use, may not be reproduced or disseminated in any form and may not be used as a basis for or a component of any financial instruments or products or indices. None of the MSCI information is intended to constitute investment advice or a recommendation to make (or refrain from making) any kind of investment decision and may not be relied on as such. Historical data and analysis should not be taken as an indication or guarantee of any future performance analysis, forecast or prediction.

The MSCI information is provided on an "as is" basis and the user of this information assumes the entire risk of any use made of this information. MSCI, each of its affiliates and each other person involved in or related to compiling, computing or creating any MSCI information (collectively, the "MSCI Parties") expressly disclaims all warranties (including, without limitation, any warranties of originality, accuracy, completeness, timeliness, noninfringement, merchantability and fitness for a particular purpose) with respect to this information. Without limiting any of the foregoing, in no event shall any MSCI Party have any liability for any direct, indirect, special, incidental, punitive, consequential (including, without limitation, lost profits) any other damages. (www.msci.com)

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Global emerging markets equities ended flat over the nine months from the Fund's inception to September 2021.

Share prices initially rose sharply on optimism over the vaccine rollout which allowed for the re-opening of economies worldwide. Corporate earnings were driven by an e-commerce boom, a multi-year technology upgrading cycle and pent-up infrastructure demand. Increasing adoption of climate change goals by governments also fuelled interest in clean energy themes. Investors brushed aside concerns over supply chain disruptions caused by a shortage in semiconductors, shipping gridlocks and an energy crunch. However, the spread of the more contagious Delta variant of Covid-19 capped stock market gains in some emerging economies due to their relatively slow vaccine rollouts.

Moreover, the asset class was weighed by worries over a slowdown in benchmark heavyweight China, where Beijing's effort to promote 'common prosperity' led to a

tough regulatory environment for some business models. Chinese equities fell as the country's leadership focused on sustainable development issues. These ranged from excessive real estate debt, the high cost of living, education, gaming, worker welfare, technology giants' antitrust and data privacy practices to climate change.

India was a bright spot, reaching an all-time high despite a deadly resurgence of Covid-19 infections, which subsequently ebbed. Sentiment was buoyed by New Delhi's pro-business policies that exceeded expectations and a sustained corporate earnings recovery. Taiwanese companies also did well, given their dominance in the electronics supply chain.

In Latin America and Russia, investors cheered the commodities boom and hoped that massive fiscal stimulus in the US would further boost the region's exports. In Russia, sentiment was lifted by soaring oil & gas prices as the energy sector accounted for a significant part of the economy. Conversely, Brazil, Latin America's largest market, pulled back and ended lower amid worries about its stretched fiscal position and rising political uncertainties. On the policy front, central banks in Brazil, Mexico and Russia began to hike interest rates to control inflationary pressures.

Portfolio review

Performance was driven by our positions in the consumer discretionary and industrial sectors. Conversely, the financial sector – more specifically, our exposure to insurance – disappointed. Our exposures in China were the main contributors, complemented by South Korea and Russia. The Fund's holdings along the semiconductor value chain also added to the good performance. Conversely, the position in India dented gains.

In China, our positions in solar energy names Longi Green Energy and Sungrow Power Supply as well as electric vehicle battery maker, Contemporary Amperex, boosted returns, thanks to their alignment to national clean energy objectives. Separately, the share price of Wuxi Biologics, a fast-growing third-party drug developer, rose on contract wins. Not holding Alibaba and Tencent proved prudent, as the benchmark heavyweights became the targets of policy tightening.

Extreme-ultraviolet (EUV) lithography tool provider ASML, a leading player in the semiconductor value chain, was buoyed by sustained demand. In Russia, recruitment company Headhunter boosted the Fund with good results. Meanwhile, Sberbank contributed on the back of the country's economic recovery and expanding loan growth amid a rising interest rate environment. Conversely, not holding Gazprom hurt the Fund as the energy giant benefited from the oil & gas boom.

Emerging Markets Sustainable Development Equity Fund

Continued

In India, not holding Reliance weighed down returns as investors reacted positively to the energy-telco conglomerate's renewables strategy. Good performance by rail freight operator Container Corp mitigated the weakness.

Besides the key portfolio activity mentioned in the interim report, we initiated Vitasoy, Bukalapak.com, Aptus Value Housing Finance and Renew Energy Global. Against these, we exited Godrej Agrovet.

Outlook

Despite China's regulatory agenda related to social equality, data security and environmental sustainability, we believe that Beijing remains pro-innovation and, in the long term, a greater focus on social equality should put the economy on a more sustainable footing. It is a similar story with the shift in the country's growth model to have less reliance on the property sector. We also believe the global economic recovery is supported by accelerating vaccination rates that allow an easing of mobility restrictions. This should mitigate the pockets of inflationary pressure in parts of emerging markets tied to rising energy prices and near-term supply chain disruptions. With central banks across emerging markets on the front foot, and external balances mostly in good shape, we view the risks associated with Fed tapering as manageable for most of the asset class.

Valuations in emerging markets are now looking more supportive and, as stock pickers, we remain focused on attractively valued companies with pricing power and sustainable economic moats that drive long-term returns. The asset class remains attractive due to the diversity of high-quality companies underpinned by structural growth drivers, including healthy demographics, a growing middle class and relatively undemanding valuations. By sticking to our disciplined, bottom-up approach, we expect our holdings to deliver sustainable returns to shareholders over the longer term.

Emerging Markets Total Return Bond Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of Emerging Markets Total Return Bond – A Accumulation Shares increased by 3.85% compared to a decrease of 4.58% in the benchmark, the FTSE US Government Bond TR Index from 1 October 2020 to 19 June 2021 and the 75% JP Morgan EMBI Global Diversified Index, 25% JP Morgan GBI-EM Global Diversified Index from 20 June 2021 to 30 September 2021.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Benchmark return: Source: Lipper, Basis: close of business return, income reinvested, gross of expenses, USD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Emerging market (EM) debt returns were positive over the period. Although the market saw increased volatility at the beginning, momentum quickly turned positive following the relatively smooth US elections. Following this, there were multiple successful Covid-19 vaccine trials and the passing of a new US\$900 billion stimulus bill. This supported EMs, even during a second wave of Covid-19 infections that caused many countries to reinstate lockdown measures. This strong momentum fizzled out at the beginning of 2021 amid increased economic uncertainty and vaccine rollout challenges. However, risk assets began to climb again in February, driven by higher commodity prices, stronger inflation prospects, positive vaccine sentiment and the passing of the US\$1.9 trillion Covid-19 relief package.

Despite the spread of the more transmissible Delta variant of Covid-19, risk sentiment continued to improve in the second half of the period, as strong vaccination progress – particularly in the developed world – led to economic reopenings and increased optimism for a global economic recovery. In the final three months of the period, US Treasury yields were volatile due to reduced US Treasury issuance and tapering comments from US Federal Reserve (Fed) Chair Jerome Powell. In September, the Fed announced it would begin to slow the pace of its asset purchases – now projected to come to an end in 2022. Oil prices were also volatile, with the Brent crude oil price ending the period at US\$77.81 per barrel. Vaccine optimism, widespread supply disruption and falling inventories combined to support the rising oil price.

Portfolio review

The Fund's local and hard-currency allocation, currency exposure and credit allocation were all positive for returns, while the derivative positioning detracted. On a country

basis, hard-currency bonds in Ukraine, Benin, Egypt, Ghana, Ivory Coast, Kenya, Nigeria, Mexico, Trinidad and Tobago, Armenia and Azerbaijan contributed to returns. Local-currency bonds in Mexico, India, Indonesia and Egypt also helped, as did credit allocation in Trinidad and Tobago. The Fund's cash allocation to the euro and exposure to the Mexican peso and Russian rouble were further contributors. On the other side, the biggest detractor to returns was the Fund's derivative positioning in the US. Our allocation to the US and Canadian dollars also hurt performance, as did currency exposure to the Hungarian forint and West African CFA franc and hard-currency bonds in El Salvador.

In terms of activity, we maintained our relatively large exposure to high-yield bonds. We added to the Bahamas, a likely tourism beneficiary of an effective vaccine. We reduced positions in Kenya and Saudi Arabia, due to the prospect of issuance later in the year for both countries. We increased the Fund's exposure to some single-name credit default swaps in Panama, Russia and Colombia. In the second half of the period, we bought a new issue from quasi-sovereign company Georgian Railway and added exposure to Kenya, Mongolia and Cameroon. In local currency, we reduced exposure to Ukraine and Egypt and added to our position in Russia. Later, we reduced our exposure to the South African rand and sold positions in El Salvador based on the country's declining macroeconomic outlook. In the corporate space, we took part in a new issue from Chilean oil and gas firm Empresa Nacional

Outlook

EM assets continue to benefit from the global economic recovery and accommodative fiscal policies, especially since the risk of prolonged lockdowns has diminished as the global vaccine rollout accelerates. Financing needs should remain contained for many EM economies, where better-than-expected growth in the first half of the year led to robust revenue growth. Meanwhile, the recent International Monetary Fund special drawing rights allocation has also boosted reserves. While inflation has been high across the globe, EM central banks have responded with orthodox monetary policy – by raising interest rates – and seem to be ahead of the curve compared with developed market policymakers. The risks to our outlook remain a hawkish Fed leading to rising US Treasury yields and sustained US dollar strength. A more pronounced slowdown in China would also weigh on commodity prices and sour sentiment. Lastly, vaccine inefficacy against new Covid-19 variants, which delays economic reopenings and engenders social unrest, is also a risk to our outlook.

Euro Government Bond Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of Euro Government Bond – A Accumulation Shares decreased by 4.61% compared to a decrease of 1.75% in the benchmark, the Bloomberg Barclays Euro Aggregate Treasury TR Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, EUR.

Benchmark return: Source: Bloomberg, Basis: close of business return, income reinvested, gross of expenses, EUR.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

The global economy began to recover at the beginning of the review period, following the unprecedented economic decline of the second quarter of 2020. That recovery was driven by ultra-loose monetary and fiscal policy across the globe. The US led the way, particularly in terms of fiscal support. The Democratic Party regained both the White House and the Senate, resulting in unified control of the executive and legislative branches of government. The new administration's stated goals were to deal with the aftermath of the Covid-19 pandemic, while pushing a bold agenda of government-funded spending and investment. A series of spending bills were passed, forcing eye-watering quantities of money into the US economy. Growth and inflation expectations rose substantially, bolstered by an impressive vaccine rollout in the US. This combination of loose economic policy and rising investor optimism saw the 10-year US Treasury yield rise by over 100 bps in the first six months of the review period. Global yields followed, with varying degrees of economic justification.

Global government bonds delivered mixed performance between April and June but rose in aggregate (yields fell). In April, US Treasuries rallied and outperformed other markets, particularly those in Europe, which moved higher in yield. May was a relatively choppy month for sovereign bonds, with the main theme once again being European underperformance versus other markets. A fall in commodity prices aided this and led to inflation expectations falling, or at least pausing briefly in their rise. In terms of economic performance, data releases highlighted that the US economy is still at risk of higher-than-expected inflation in the near term. Government bond markets started June on the front foot, with yields falling and curves flattening. The excitement really began in the aftermath of the Federal Open Market Committee meeting in the middle of the month, which accelerated the curve-flattening trend globally.

Moving into the quieter summer markets, government bonds began exhibiting big swings. Markets rallied in an environment of relatively thin liquidity and continued central bank purchases. These squeezed yields lower into the middle of August, only for the movements to retrace fully by the end of September. US Treasuries and German Bunds ended the period relatively unchanged. Inflation continued to grab headlines, with energy prices surging. This challenged the 'transitory inflation' narrative, causing an uncomfortable mix for global bonds. Economic activity across most developed regions remained strong. However, there were some worrying signals emerging from China over the property market; property developer, Evergrande, looked set to default on bond payments due. So far, markets assume the potential collapse of the Chinese property market will not derail the global recovery, but risks are clearly rising.

Portfolio review

The portfolio underperformed the benchmark over the period. This was predominantly due to the reflation narrative persisting for longer than we thought, with the market focussing on relatively short-term economic performance (economy reopening post-shutdown), rather than focussing on the longer-term economic issues that are likely to result. A long duration bias in US, Australia and New Zealand detracted, as did short inflation positions. Underweight positions in Italy and France partially offset this, as did a curve flattening bias in US Treasuries. With a bias for long positions in the US dollar and defensive positioning versus more cyclical and risk-facing currencies, foreign exchange positions were also a drag on performance. With peak growth rates in the rear-view mirror, higher inflation likely to squeeze consumption and fiscal policy less supportive in 2022, long-end yields are likely to be find some support moving forward.

Outlook

The outlook for government bonds remains challenged by inflationary fears about reopening the global economy and record fiscal spending in many regions. Inflationary fears have increased recently, with surging prices pushing expectations higher and challenging the 'transitory inflation' narrative which central banks had adopted post pandemic. Supply shortages are particularly acute in some sectors, and headline inflation figures have moved far beyond earlier expectations. This has proven to be an uncomfortable mix for government bonds over the past month.

Central bank discussions have centred on the eventual removal of support as economies continued their post-pandemic recovery. The US Federal Reserve (Fed) hinted that a tapering of asset purchases could come towards

Euro Government Bond Fund

Continued

year-end; at the September meeting, the committee suggested that a quicker pace of tapering, ending purchases by mid-2022 rather than later in the year, was also possible. This was backed up by Fed Chair Powell in his post-meeting communication, in which he did little to push back against hawkish interpretations of the evolving Fed narrative.

US 10-year yields have broken upwards through 1.50%. With headline inflation running close to 5%, there is a risk that inflation remains a more credible threat to valuations in the short term. We also believe the chances of near-term policy errors by central banks have increased. Significant fiscal cliffs are on the horizon across many regions. While governments are likely to provide some support in 2022, this will pale in comparison to the fiscal largesse of the past 18 months.

Euro Short Term Bond Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of Euro Short Term Bond – A Accumulation Shares decreased by 0.80% compared to a decrease of 0.63% in the benchmark, the FTSE EMU Government Bond (1–3 Years) (ex BBB) Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, EUR.

Benchmark return: Source: RIMES, Basis: close of business return, income reinvested, gross of expenses, EUR.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

The global recovery after the unprecedented economic decline of the second quarter of 2020 was swift and dramatic. This recovery was driven by ultra-loose monetary and fiscal policy across the globe. However, continental Europe lagged significantly. Covid-19 vaccination rates remained low initially, as vaccine supply issues became politicised.

European investment grade markets started the period off well. On the political front, narrow avoidance of a 'no-deal' Brexit outcome and a favourable outcome to the US presidential and Senate elections was also positive. However, these were balanced to some extent by the emergence of new viral strains and surging infection rates, which led to the reintroduction of stringent lockdown measures. Nevertheless, expectations for a strong rebound in global economic growth gradually increased in early 2021, and this was positive for credit fundamentals. However, the economic recovery, fuelled in part by government spending growth, stoked fears of rising inflation. This led to sharp increases in government bond yields, which adversely affected credit markets.

May's Eurozone inflation rose sharply to 2%, leading investors to demand higher yields in the bond market. European Central Bank (ECB) policymakers and investors appeared unruffled, seemingly content to look through the temporary bout of higher inflation and keep policy accommodative further into the recovery. Euro-area inflation has remained a problem, however, jumping to the highest in a decade in August. That strong inflation data put markets on alert that the ECB could be looking to dial back its massive emergency stimulus. At its September policy meeting it announced that it would slow down the pace of the pandemic bond-buying programme in the final three months of 2021, acknowledging that the euro area's recovery is strong enough to endure with less support.

Portfolio review

The performance of European investment grade (IG) credit was robust over the period. Spreads outperformed as the European Central Bank (ECB) continued to mop up large quantities of the European IG market as part of its asset purchase programmes. It is buying less than expected but still a huge magnitude, and this continues to help provide a favourable technical backdrop. The Fund moved short duration relative to the benchmark as historic positions rolled in and matured. The Fund looks to maintain the $\frac{3}{4}$ -year short benchmark position; there is little upside in moving long at the moment, with spreads at all-time tights, more so than before the Covid-19 crisis. New issuance in short-end euros was minimal. However, when deals came to market the Fund invested in bonds the favoured by our credit analyst, taking advantage of attractive new issue premiums. Most notably, floating exposure was added, providing protection against potential moves higher in interest rates as the global economy reopens and inflation rears its head. The Fund's exposure to high-quality credit added to returns.

Generally, moves in German bund yields were muted as Europe's hefty central bank bond buying and a dovish tone from central bank officials drove yields lower. The curve between the two- and five-year yield remained extremely flat, and the Fund maintained a curve flattener through the futures position. This position was favourable for performance. However, bond yields have begun to creep up over the last few months as inflation gains momentum. This has been caused by soaring energy costs, supply side and labour shortages, and increased expectations of central bank tightening in the near term to calm cost pressures. This would gradually reduce support and excess liquidity in markets. These moves were concentrated in the long end but affected the short end in a less dramatic fashion. The German schatz and bobl yields rose; while there has been steepening between the two, this was muted compared with moves in longer-dated bunds. The Fund will continue to maintain the curve flattener through the futures position, as these moves seem overcooked with the Eurozone economy still in a fragile state.

Outlook

Supply chain bottlenecks have developed in the recovery from the Covid-19 health crisis. This is making for huge delays in shipping and soaring costs, bringing temporary spikes in inflation. There are risks that prices are likely to be pushed higher still in the near term with a lot of pent-up consumer savings sitting in the wings, and if government spending and easy central bank policy is not reined in then this could lead to more persistent substantially higher inflation.

Euro Short Term Bond Fund

Continued

The ECB must decide whether to ease up on its stimulus given the prospect of rapid growth over the rest of the year as economic restrictions have lifted and the economy is in a rebound phase. Come the December meeting, we may see more decisions taken as its Governing Council will have another round of updated economic projections to consider and the disbursements under the bloc's recovery fund will be under way. That could make for a more heated debate over the pace of emergency bond buying and potentially encourage hawkish policy makers to try to start talks on how to phase out the programme. However, there are numerous risks to this outlook with ECB President Christine Lagarde warning of any undue tightening of financial conditions in Europe and continuing with the message that inflationary pressures in the euro area are largely transitory.

European Equity (ex-UK) Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of European Equity (ex UK) – A Accumulation shares increased by 21.79% compared with an increase of 28.80% in its benchmark, the FTSE World Europe ex UK TR Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, EUR.

Benchmark return: Source: Lipper, Basis: close of business return, income reinvested, gross of expenses, EUR.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested

Market review

European shares (excluding the UK) finished substantially higher over the 12 months. Stocks dipped in October 2020 as a dramatic rise in Covid-19 cases sparked lockdown fears and actual lockdowns. However, equities rallied in November as major vaccine breakthroughs, a Biden presidency and falling new coronavirus cases lifted stocks.

December 2020 saw this positive trend continue. The roll out of vaccinations, a new Brexit trade deal, the confirmation of a Biden victory and the €500 billion expansion of the European Central Bank's (ECB) monetary stimulus programme all drove markets upwards.

The first month of 2021 halted this upward momentum, and most European indices fell amid renewed lockdown measures. However, the region's equities performed well from February until the end of the period, despite ongoing lockdown measures and rising Covid-19 cases.

However, after rising for seven consecutive months, European shares fell in September, with Germany among the worst performers. Outgoing Chancellor Angela Merkel's Christian Democratic Union-Christian Social Union bloc lost out to the Social Democratic Party in the federal election, although forming a coalition government is expected to take some time.

September saw Norway's Norges Bank become the first major developed bank to raise interest rates since the start of the pandemic. Attempting to reassure investors that the ECB will not follow suit, President Christine Lagarde said the central bank is not tapering bond market support. However, the ECB plans to reduce the pace of its pandemic emergency purchase programme from the current €80 billion per month level. Inflation fears weighed on markets. The Eurozone's annual inflation rate is forecast to reach 3.4% in September, from August's 3.0%, which is above market expectations of a 3.3% rise.

Portfolio review

Against this backdrop, the Fund underperformed the benchmark. Key detractors included Ubisoft, Deutsche Boerse and Prosus. Gaming developer Ubisoft weighed on returns as investors reacted to a delayed new title and the potential cost to the company of free-to-play gaming. Also costing the Fund was Deutsche Boerse, which underperformed despite delivering solid earnings and better-than-expected cost control during the period. Volume growth remains relatively muted, however, against a high comparative base from the prior year. Lastly, internet business Prosus underperformed, as investors were concerned about how the company would use the cash raised from the sale of its Tencent shares.

Conversely, benefiting the Fund were ASML Holdings, Nemetschek and a lack of exposure to Roche. Shares of ASML Holdings outperformed due to additional investment from its key customers. Many of the semiconductor manufacturers ASML serves are struggling due to a significant shortfall in chips as demand has surged. Software company Nemetschek also added value, as the share price recovered following strong results, despite broader technology weakness in the second half of the period. Meanwhile, a lack of exposure to Roche proved beneficial as its share price fell due to a combination of higher-than-expected declines of some prior top-sellers and an element of weaker demand due to Covid-related treatment delays.

Outlook

September marked the first negative month for European equities since January, yet overall performance has improved significantly in recent months as risk appetite has become more balanced and as markets have started to look ahead to corporate earnings prospects beyond the current year.

As we reflect on the summer, it is clear that risks to growth have become more elevated. As growth rates normalise and cost pressures rise, our holdings in higher-quality areas of the market increasingly have the potential to match or exceed the average earnings performance of the market, coupled with much greater protection against any downside risks that may emerge. With the bulk of the early cycle rebound behind us, and the outlook for 2022 moderating on a combination of supply chain pressures and fading policy support, we see the focus shifting back to long-term earnings prospects as the primary driver of equity returns. In such an environment, we would expect to revert to delivering sustained outperformance regardless of the direction of bond yields given the superior growth and quality credentials of the Fund.

Market review

Pan European shares finished substantially higher over the 12 months. Stocks dipped in October 2020 as a dramatic rise in Covid-19 cases sparked lockdown fears and actual lockdowns. However, equities rallied in November as major vaccine breakthroughs, a Biden presidency and falling new coronavirus cases lifted stocks.

December 2020 saw this positive trend continue. The rollout of vaccinations, a new Brexit trade deal, the confirmation of a Biden victory and the €500 billion expansion of the European Central Bank's (ECB) monetary stimulus programme all drove markets upwards.

The first month of 2021 halted this upward momentum, and most European indices fell amid renewed lockdown measures. However, the region's equities performed well from February until the end of the period, despite ongoing lockdown measures and rising Covid-19 cases. The UK was the first market to lift all restrictions in July, despite concerns about the spread of the Delta variant of Covid-19. There has been a welcome recovery in economic activity, but this put a strain on supply chains. Most recently, the disruption caused by the ongoing fuel shortage has dented sentiment.

September saw Norway's Norges Bank become the first major developed bank to raise interest rates since the start of the pandemic. Attempting to reassure investors that the ECB will not follow suit, President Christine Lagarde said the central bank is not tapering bond market support. However, the ECB plans to reduce the pace of its

pandemic emergency purchase programme from the current €80 billion per month level. Inflation fears weighed on markets.

Portfolio review

Against this backdrop, the Fund underperformed the benchmark. Key detractors included a lack of exposure to ASML Holdings and positions in Deutsche Boerse and Enel. Not holding ASML Holdings proved costly as the stock outperformed due to additional investment from its key customers. Many of the semiconductor manufacturers ASML serves are struggling due to a significant shortfall in chips as demand has surged. Also costing the Fund was Deutsche Boerse, which underperformed despite delivering solid earnings and better-than-expected cost control during the period. Volume growth remains relatively muted, however, against a high comparative base from the prior year. Lastly, energy company Enel's share price fell as fears during the third quarter of 2021 over foreign-exchange declines in Latin America and regulatory intervention in Spain led to cuts in earnings forecasts.

Conversely, benefiting the Fund were Nordnet, a lack of exposure to SAP and Novo-Nordisk. Nordic broking business Nordnet contributed positively to performance following the company's successful initial public offering and its track record of delivering attractive levels of customer growth. Not holding SAP contributed to returns as it was adversely affected by the new CEO's reset of growth and margin guidance. Novo-Nordisk, the global leader in diabetes treatment, performed well after reporting a strong start to 2021, which prompted management to raise earnings guidance for the full year. Having owned the company for more than a decade, we have become familiar with the conservative nature of the management team and view this as a strong positive signal so early in the year.

Outlook

After a very challenging 2020, the outlook for European dividends in 2021 continues to improve. As we see the path towards the reopening of Europe continuing, we have added consumer companies to the portfolio.

Europe remains an attractive source of premium dividend yields. Nevertheless, we must bear in mind that it has taken unprecedented levels of monetary and fiscal stimulus to avoid a more severe crisis – this debt must be repaid at some point. Furthermore, longer-term growth and interest rates are likely to remain low at a time when debt levels continue to increase. In our view, this means markets are likely to remain volatile over the medium term.

European Equity Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of European Equity – A Accumulation shares increased by 18.45% compared with an increase of 29.67% in its benchmark, the FTSE World Europe TR Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, EUR.

Benchmark return: Source: Lipper, Basis: close of business return, income reinvested, gross of expenses, EUR.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Pan European shares finished substantially higher over the 12 months. Stocks dipped in October 2020 as a dramatic rise in Covid-19 cases sparked lockdown fears and actual lockdowns. However, equities rallied in November as major vaccine breakthroughs, a Biden presidency and falling new coronavirus cases lifted stocks.

December 2020 saw this positive trend continue. The roll out of vaccinations, a new Brexit trade deal, the confirmation of a Biden victory and the €500 billion expansion of the European Central Bank's (ECB) monetary stimulus programme all drove markets upwards.

The first month of 2021 halted this upward momentum, and most European indices fell amid renewed lockdown measures. However, the region's equities performed well from February until the end of the period, despite ongoing lockdown measures and rising Covid-19 cases. The UK was the first market to lift all restrictions in July, despite concerns about the spread of the Delta variant of Covid-19. There has been a welcome recovery in economic activity, but this put a strain on supply chains. Most recently, the disruption caused by the ongoing fuel shortage has dented sentiment.

September saw Norway's Norges Bank become the first major developed bank to raise interest rates since the start of the pandemic. Attempting to reassure investors that the ECB will not follow suit, President Christine Lagarde said the central bank is not tapering bond market support. However, the ECB plans to reduce the pace of its pandemic emergency purchase programme from the current €80 billion per month level. Inflation fears weighed on markets.

Portfolio review

Against this backdrop, the Fund underperformed the benchmark. Key detractors included Ubisoft, Prosus and Deutsche Boerse. Ubisoft weighed on returns as investors reacted to a delayed new title and the potential cost to

the company of free-to-play gaming. Elsewhere, internet business Prosus underperformed as investors were concerned about how the company would use the cash raised from the sale of its Tencent shares. Also costing the Fund was Deutsche Boerse, which underperformed despite delivering solid earnings and better-than-expected cost control during the period. Volume growth remains relatively muted, however, against a high comparative base from the prior year.

Conversely, benefiting the Fund were ASML Holdings, Nemetschek and Novo-Nordisk. Shares of ASML Holdings outperformed due to additional investment from its key customers. Many of the semiconductor manufacturers ASML serves are struggling due to a significant shortfall in chips as demand has surged. Software company Nemetschek also added value, as the share price recovered following strong results, despite broader technology weakness in the second half of the period. Novo-Nordisk, the global leader in diabetes treatment, performed well after reporting a strong start to 2021, which prompted management to raise earnings guidance for the full year. Having owned the company for more than a decade, we have become familiar with the conservative nature of the management team and view this as a strong positive signal so early in the year.

Outlook

September marked the first negative month for European equities since January, yet overall performance has improved significantly in recent months as risk appetite has become more balanced and as markets have started to look ahead to corporate earnings prospects beyond the current year.

As we reflect on the summer, it is clear that risks to growth have become more elevated. As growth rates normalise and cost pressures rise, our holdings in higher-quality areas of the market increasingly have the potential to match or exceed the average earnings performance of the market, coupled with much greater protection against any downside risks that may emerge. With the bulk of the early cycle rebound behind us, and the outlook for 2022 moderating on a combination of supply chain pressures and fading policy support, we see the focus shifting back to long-term earnings prospects as the primary driver of equity returns. In such an environment, we would expect to revert to delivering sustained outperformance regardless of the direction of bond yields given the superior growth and quality credentials of the Fund.

Frontier Markets Bond Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of Frontier Markets Bond – A Income Shares increased by 12.44% compared to an increase of 10.80% in the benchmark, the J.P. Morgan Next Generation Markets Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Benchmark return: Source: JP Morgan, Basis: close of business return, income reinvested, gross of expenses, USD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Frontier market debt performed strongly over the period. Although the market saw increased volatility at the beginning, momentum quickly turned positive following the relatively smooth US elections. Following this, there were multiple successful Covid-19 vaccine trials and the passing of a new US\$900 billion stimulus bill. This supported Emerging Markets (EM), even during a second wave of Covid-19 infections that caused many countries to reinstate lockdown measures. This strong momentum fizzled out at the beginning of 2021 amid increased economic uncertainty and vaccine rollout challenges. However, risk assets began to climb again in February, driven by higher commodity prices, stronger inflation prospects, positive vaccine sentiment and the passing of the US\$1.9 trillion Covid-19 relief package.

Despite the spread of the more transmissible Delta variant of Covid-19, risk sentiment continued to improve in the second half of the period, as strong vaccination progress – particularly in the developed world – led to economic reopenings and increased optimism for a global economic recovery. In the final three months of the period, US Treasury yields were volatile due to reduced US Treasury issuance and tapering comments from US Federal Reserve (Fed) Chair Jerome Powell. In September, the Fed announced it would begin to slow the pace of its asset purchases – now projected to come to an end in 2022. Oil prices were also volatile, with the Brent crude oil price ending the period at US\$77.81 per barrel. Vaccine optimism, widespread supply disruption and falling inventories combined to support the rising oil price.

In frontier markets, Ghana, El Salvador and Angola were some of the top performers in the first half of the period, driven by vaccine optimism and higher oil prices. At the other end of the returns table was Sri Lanka. In Sri Lanka, the Constitutional Amendment 20A, which consolidates more executive power, passed on

22 October, triggering further weakness in Sri Lankan assets. This was exacerbated by rising Covid-19 infections, which have further delayed the recovery in tourism. Meanwhile, Zambian assets were lifted in the second half of the period when Hakainde Hichilema of the United Party for National Development was declared winner of the country's presidential election. The newly elected president pledged to stabilise the country's shaky finances by resolving the debt crisis and coming to an agreement with bondholders, while also securing an International Monetary Fund (IMF) programme. In July, the IMF also agreed to the largest special drawing rights allocation in its history, at US\$650 billion. Of this, approximately 42% will go to EMs, with Zambia one of the main beneficiaries of this increase. Overall, high-yield bonds outperformed investment grade, as risk sentiment improved over the period.

Portfolio review

The Fund's local and hard-currency bonds, credit allocation and currency exposure all contributed to returns.

One of the best-performing regions was Africa, with the Fund's hard-currency bonds in Angola, Ghana, Kenya, Benin, Ivory Coast, Senegal and Zambia contributing to returns. Local-currency bonds in Uganda, Egypt and Ghana also added to performance, as did credit allocation in Nigeria and currency exposure to the Zambian kwacha. Credit allocation and hard and local-currency bonds in Ukraine also helped, along with hard-currency bonds in Barbados, Ecuador and Iraq. Conversely, the biggest detractor from returns was our hard-currency allocation in Argentina. Hard-currency bonds in El Salvador and Cameroon and exposure to the Pakistani rupee also weighed on returns.

In the first half of the period, we increased our exposure to hard-currency (US dollar-denominated) bonds in Iraq and Zambia, sold our positions in Gabon and reduced risk in Ghana. We also participated in a Eurobond new issue from Benin, with positions in both tranches 2032 and 2052. In the second half of the period, we carried out a switch from Egypt 2021 bonds to 2026 bonds and added to our positions in Nigeria, Benin, Belarus and Kazakhstan. On the sell side, we reduced our Eurobond exposure in Montenegro and Ivory Coast and reduced our exposure to Ecuador to neutral, given the increased election risks. Due to a change in outlook, we also decreased our exposure to Tunisia, and sold our positions in the Dominican Republic because of valuations.

In local currency, we added risk in Ghana, Uganda and Egypt and initiated a new position in Pakistan. In the corporate space, we bought several attractively

Frontier Markets Bond Fund

Continued

priced new issues from First Bank of Nigeria, Ukrainian agribusiness Kernel Holding, Nigeria-based Seplat Petroleum, Honduran financial services firm Inversiones Atlántida and Barbados-based financial services provider Sagicor Financial.

Outlook

EM assets continue to benefit from the global economic recovery and accommodative fiscal policies, especially since the risk of prolonged lockdowns has diminished as the global vaccine rollout accelerates. Financing needs should remain contained for many EM economies, where better-than-expected growth in the first half of the year led to robust revenue growth. Meanwhile, the recent IMF special drawing rights allocation has also boosted reserves. While inflation has been high across the globe, EM central banks have responded with orthodox monetary policy – by raising interest rates – and seem to be ahead of the curve compared with developed market policymakers. The risks to our outlook remain a hawkish Fed leading to rising US Treasury yields and sustained US dollar strength. A more pronounced slowdown in China would also weigh on commodity prices and sour sentiment. Lastly, vaccine inefficacy against new Covid-19 variants, which delays economic reopenings and engenders social unrest, is also a risk to our outlook.

Market review

Frontier equities advanced over the period under review, comfortably outperforming their peers across developed and emerging markets. A confluence of positive factors bolstered the asset class. Notably, the rollout of Covid-19 vaccines worldwide towards end-2020 raised hopes of a global recovery, helping markets erase their earlier losses. Also aiding sentiment was Joe Biden's election as US president, along with sustained strength in prices of oil and other key metals. However, in 2021, US Treasury yields rose on fears of faster inflation, which eroded share-price gains as appetite for riskier assets declined.

Most key markets ended higher. Vietnam, a benchmark heavyweight, chalked up double-digit gains amid the country's largely effective pandemic response, improving economic data and political stability. Several major African markets also fared well. The higher oil price, coupled with the central bank's surprise interest rate cut in September, buoyed Nigeria. Meanwhile, Kenya gained as its agreement with the International Monetary Fund over a US\$2.3 billion financing package eased worries about its fiscal position. In Latin America, the rally in copper prices helped Peru shrug off political turmoil after President Martin Vizcarra was impeached for alleged corruption.

His immediate replacement, Manuel Merino, resigned in a week after massive protests erupted, with market-friendly technocrat Fernando Sagasti taking the helm subsequently.

Outlook

The Fund closed on 26 February 2021.

GDP Weighted Global Government Bond Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of GDP Weighted Global Government Bond – A Accumulation Shares decreased by 1.17% compared to an increase of 0.01% in the benchmark, the Barclays Global Treasury Universal GDP Weighted by Country Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Benchmark return: Source: Barclays, Bloomberg Barclays Capital, Basis: close of business return, income reinvested, gross of expenses, USD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

The global economy began to recover at the beginning of the review period, following the unprecedented economic decline of the second quarter of 2020. That recovery was driven by ultra-loose monetary and fiscal policy across the globe. The US led the way, particularly in terms of fiscal support. The Democratic Party regained both the White House and the Senate, resulting in unified control of the executive and legislative branches of government. The new administration's stated goals were to deal with the aftermath of the Covid-19 pandemic, while pushing a bold agenda of government-funded spending and investment. A series of spending bills were passed, forcing eye-watering quantities of money into the US economy. Growth and inflation expectations rose substantially, bolstered by an impressive vaccine rollout in the US. This combination of loose economic policy and rising investor optimism saw the 10-year US Treasury yield rise by over 100 bps in the first six months of the review period. Global followed, with varying degrees of economic justification.

Global government bonds delivered mixed performance between April and June but rose in aggregate (yields fell). In April, US Treasuries rallied and outperformed other markets, particularly those in Europe, which moved higher in yield. May was a relatively choppy month for sovereign bonds, with the main theme once again being European underperformance versus other markets. A fall in commodity prices aided this and led to inflation expectations falling, or at least pausing briefly in their rise. In terms of economic performance, data releases highlighted that the US economy is still at risk of higher-than-expected inflation in the near term. Government bond markets started June on the front foot, with yields falling and curves flattening. The excitement really began in the aftermath of the Federal Open Market Committee meeting in the middle of the month, which accelerated the curve-flattening trend globally.

Moving into the quieter summer markets, government bonds began exhibiting big swings. Markets rallied in an environment of relatively thin liquidity and continued central bank purchases. These squeezed yields lower into the middle of August, only for the movements to retrace fully by the end of September. US Treasuries and German Bunds ended the period relatively unchanged. Inflation continued to grab headlines, with energy prices surging. This challenged the 'transitory inflation' narrative, causing an uncomfortable mix for global bonds. Economic activity across most developed regions remained strong. However, there were some worrying signals emerging from China over the property market; property developer, Evergrande, looked set to default on bond payments due. So far, markets assume the potential collapse of the Chinese property market will not derail the global recovery, but risks are clearly rising.

Portfolio review

The Fund underperformed relative to the benchmark. Our positioning remained defensive and cautious through most of the review period; we judged that the market was unwilling to look through the short-term support of monetary and fiscal stimulus to see the significant economic scarring that lay beneath. In particular, long duration positions in the US, Canada, Australia and New Zealand detracted from performance.

As the Fund's long duration strategy became increasingly untenable, due to the big moves higher in yields, we significantly reduced the duration of the Fund through the end of 2020 and into the first quarter of 2021. We retained many of our core strategies, such as favouring dollar bloc duration versus Europe and Japan. We also reduced emerging market duration in higher-risk markets, such as Brazil and Indonesia. Elsewhere, we retained core longs in the less fiscally profligate markets of Mexico and Russia.

Reflecting how quickly the market has gone through the stages of an economic cycle, we began to increase exposure to the US dollar. This demonstrated the dominance of US fiscal policy in driving growth expectations and the role that the dollar plays as the only currency of choice during periods of heightened risk aversion. We also added yield-curve flatteners in the US, as we think further growth and inflation expectations will result in the market more forcefully testing the US Federal Reserve's (Fed) on-hold interest rate policy stance.

Foreign exchange positioning made a big positive contribution to performance. Our bias to owning the US dollar versus both risky/cyclical and defensive currencies was a drag at the end of 2020. However, as it became clear that the Fed's ultra-dovish stance was untenable, and as risk asset performance became less euphoric and more volatile and nuanced, the greenback recovered strongly. This boosted returns.

GDP Weighted Global Government Bond Fund

Continued

Outlook

The macroeconomic outlook is more dramatic and uncertain than ever. Base effects have pushed headline inflation higher. However, we are now seeing significant second round effects as energy costs continue their march higher. This is creating domino effects across global supply chains. With consumer demand still artificially high as a result of fiscal stimulus, this is leading to shortages and squeezes. The peak of inflation probably still lies ahead, but we think this cost-push inflation sows the seeds of its own destruction, acting as a material headwind to future consumption. Fed guidance suggests rate hikes are unlikely until the end of 2022. However, this date has been moving forwards as market-based measures of future inflation continue to move higher, challenging the Fed's ability to sit on its hands. But, in such a volatile environment, the potential for the Fed's growth and inflation expectations to be inaccurate means that there are risks in both directions. While the Biden administration keeps trying to jam through further fiscal stimulus, its narrow Senate majority continues to thwart these efforts.

Our outlook is bimodal. In our base case we see growth outcomes continuing to disappoint the euphoric consensus. This creates a material headwind to already elevated risk asset valuations, supporting long end duration even in an environment of high inflation. If we are wrong and growth meets or exceeds consensus, the pressure on central banks to tighten policy will only heat up. In both environments we expect the US yield curve to be flatter and the US dollar to appreciate. That is why these remain core thematic portfolio strategies.

German Equity Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of German Equity – A Accumulation shares increased by 11.61% compared to an increase of 21.21% in the benchmark, the HDAX TR Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, EUR.

Benchmark return: Source: Lipper, Basis: close of business return, income reinvested, gross of expenses, EUR.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested

Market review

German equities rose over the 12 months under review. Sentiment was buoyed by anticipation of the end to the pandemic on the back of several vaccine breakthroughs and their subsequent rollout. Investors were also cheered by Joe Biden's election victory in the US presidential election and his pushing through of massive stimulus to upgrade infrastructure and grow jobs. However, gains were tempered by the discovery of more transmissible variants of the virus and a resurgence in Covid-19 infections that forced many parts of Europe into another round of lockdowns. Germany went into another hard lockdown over Easter to quell a 'third wave', with several other European countries delaying plans for reopening. Thereafter, sentiment improved, with the ramp-up of the European vaccination programme leading to reopenings and a rebound in economic activity.

However, German shares fell in September, amid concerns about rising inflation and the potential removal of central bank support. Meanwhile, outgoing Chancellor Angela Merkel's Christian Democratic Union-Christian Social Union bloc lost out to the Social Democratic Party in the federal election, although forming a coalition government is expected to take some time.

On the economic front, private sector activity peaked in July. The IHS Markit composite purchasing managers' index surged to 62.4, the fastest pace of growth since records began, driven by the removal of pandemic containment measures. However, activity slowed thereafter, amid supply-chain concerns and rising costs. Additionally, consumer sentiment turned positive towards the end of the period, with coronavirus cases falling and hopes that any further wave of Covid-19 infections will be more subdued. Meanwhile, second-quarter GDP growth came in at 1.6% (quarter on quarter), above preliminary estimates and the 2% contraction witnessed in the first quarter.

Portfolio review

On an individual stock basis, Scout24 detracted as its shares lagged amid the market's switch to more cyclical stocks, but this was mitigated by the company's share buyback while guiding that it would return to double-digit growth in the medium term. Knorr-Bremse weakened due to rumours that it was considering the acquisition of automotive supplier Hella, although the company later confirmed that it was not interested in buying the business. Elsewhere, exchange operator Deutsche Boerse also underperformed, due to disappointing results as coronavirus outbreaks dented confidence across key markets.

Meanwhile, the Fund's lack of holdings in Daimler and Airbus was a drag on returns. Daimler outperformed on a rebound in the cars market, as well as growing confidence in the margin trajectory of key brands and the potential spin-off of its trucks business. Airbus benefited from improving sentiment within the wider travel sector, with aircraft deliveries rising sharply year on year.

More positively, our position in Nemetschek, the construction software developer, contributed to performance. The business continued its highly profitable growth course and increased its forecast for full-year earnings. This followed better-than-expected second-quarter results, which highlighted a very strong growth outlook. CTS Eventim, the ticketing platform, was another top contributor over the quarter. Signs of a recovery in demand for live events due to improving vaccine rates and positive news flow around its venture into US and Asian markets lifted the shares.

Elsewhere, the Fund's modestly underweight exposure to SAP was additive. Its shares underperformed on its ambitious plans to move its ERP customer-base on to the cloud, which led to management pushing out margin guidance to 2025. Meanwhile, Infineon's shares did well on the back of a robust backdrop for the automotive semiconductor market and, in particular, for power discretes, where Infineon is the market leader and which saw buoyant demand on the back of good electric-vehicle sales.

Outlook

As we reflect on the summer, it is clear that risks to growth have become more elevated. As growth rates normalise and cost pressures rise, our holdings in higher-quality areas increasingly have the potential to match or exceed the average earnings performance of the market, coupled with much greater protection against any downside risks that may emerge. With the bulk of the early cycle rebound behind us, and the outlook for 2022 moderating on a combination of supply chain pressures and fading

German Equity Fund

Continued

policy support, we see the focus shifting back to long-term earnings prospects as the primary driver of equity returns. In such an environment, we would expect to revert to delivering sustained outperformance regardless of the direction of bond yields given the superior growth and quality credentials of the Fund.

Global Bond Fixed Maturity 2023 Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of Global Bond Fixed Maturity 2023 – A Accumulation Shares increased by 3.08%. The Fund does not have an official benchmark.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

The 12-month review period was dominated by Covid-19 developments. Expectations for a strong rebound in global economic growth increased over the period, which is usually positive for credit fundamentals. Despite the reintroduction of lockdowns early in the period, vaccine development progress – eventually leading to worldwide vaccine rollouts – raised hopes of a return to normality. A well-received US presidential election result, and the last-minute Brexit trade deal in the final quarter of 2020, also helped the recovery. Monetary and fiscal stimulus provided further support to markets. These offset fears of more virulent, vaccine-resistant Covid-19 variants.

However, positive sentiment fuelled new concerns around rising inflation, which weighed heavily on global bond markets and led to a sell-off in February/March, but credit markets were well insulated from the move higher in global rates markets. Bond markets stabilised in April, and investors continued to seek out government bonds in the second half of the period, pushing prices higher and yields lower, despite rising inflation. Towards the end of the period, the 'transitory inflation' narrative was challenged by a surge in energy prices, causing an uncomfortable mix for global bonds. Meanwhile, the US Federal Reserve suggested that a quicker pace of tapering, ending purchases by mid-2022 rather than later in the year, was possible. September also saw some worrying signals emerging from China over the property market; property developer, Evergrande, looked set to default on bond payments due. So far, markets assume the potential collapse of the Chinese property market will not derail the global recovery, but risks are clearly rising.

Portfolio review

The portfolio posted a positive return. Over the period, one of the top contributors to returns was our sukuk bonds (Islamic bonds) from Emirates Strategic Investments, which benefited from strong demand for investment grade names in the Middle Eastern market. Our holdings in Muthin, the Indian non-banking financial institution, also added to performance. The company overcame challenges from the spread of the Delta variant in India, and profitability recovered nicely in the 2021 fiscal year. During the period, PTA Bank (the Eastern and Southern African Trade and Development Bank) rallied, as the

company managed to avoid a downgrade to high yield, which we anticipated. Our bonds in Puma International Finance also did well as the company benefited from the rise in oil prices.

On the other side, our positions in Korea East-West Power detracted during the 12 months. The Korean quasi-sovereign issuer is sensitive to moves in US Treasuries due to the low credit spread and therefore underperformed. Korea Resources also underperformed for similar reasons. Meanwhile, the Fund's Evergrande bonds detracted following widespread concerns around the company's ability to pay its debts. The firm is one of China's largest property developers and missed several bond payment deadlines at the end of the period. Our holdings in Chinese property developer Cenchi also weighed on returns after being caught up in the volatility and uncertainty around Evergrande. Its bonds traded down in sympathy.

In terms of activity, we switched Omani sovereign bonds into sovereign bonds from the Bahamas for spread pick up. We reduced our holdings in State Bank of India and China Huarong on rich valuations, reinvesting the proceeds in Gansu Highway and ChemChina, both Chinese state-owned enterprises with strong underlying corporate fundamentals. Lastly, we carried out a switch in Chinese property by selling Ronshine and buying Kaisa Group.

Outlook

Despite investor concerns around inflation, macroeconomic data, Chinese property and the US debt ceiling, credit spreads within investment grade have remained resilient and at their tightest levels since 2007. Demand for investment grade credit remains strong and there remains money to go into the market from the bulk purchase annuity segment of investors. While it seems markets are edging closer to a bout of widening in credit spreads, this should be met by buying, preventing a large sell-off in the absence of a significant global issue. Meanwhile, the importance of the property sector to China is well known and yet the deteriorating fundamentals have been confined to that sector and region.

While rising government bond yields have hurt total returns in the year to date, yields are becoming more appealing for investment grade markets. In the UK, they have moved from around 1% at the start of the year to closer to 2% at the end of September. In the US, 10-year yields have broken upwards through 1.50%. With headline inflation running close to 5%, there is a risk that inflation remains a more credible threat to valuations in the short term. The chance of near-term policy errors by central banks has also increased. Significant fiscal cliffs are on the horizon across many regions. While governments are likely to provide some support in 2022, this will pale in comparison to the fiscal largesse of the past 18 months.

Global Bond Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of Global Bond – A Accumulation shares decreased by 3.82% compared to a decrease of 0.91% in the benchmark, the Bloomberg Barclays Global Aggregate Bond TR Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Benchmark return: Source: Lipper, Basis: close of business return, income reinvested, gross of expenses, USD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

The global economy began to recover at the beginning of the review period, following the unprecedented economic decline of the second quarter of 2020. That recovery was driven by ultra-loose monetary and fiscal policy across the globe. The US led the way, particularly in terms of fiscal support. The Democratic Party regained both the White House and the Senate, resulting in unified control of the executive and legislative branches of government. The new administration's stated goals were to deal with the aftermath of the Covid-19 pandemic, while pushing a bold agenda of government-funded spending and investment. A series of spending bills were passed, forcing eye-watering quantities of money into the US economy. Growth and inflation expectations rose substantially, bolstered by an impressive vaccine rollout in the US. This combination of loose economic policy and rising investor optimism saw the 10-year US Treasury yield rise by over 100 bps in the first six months of the review period. Global yields followed, with varying degrees of economic justification.

Global government bonds delivered mixed performance between April and June but rose in aggregate (yields fell). In April, US Treasuries rallied and outperformed other markets, particularly those in Europe, which moved higher in yield. May was a relatively choppy month for sovereign bonds, with the main theme once again being European underperformance versus other markets. A fall in commodity prices aided this and led to inflation expectations falling, or at least pausing briefly in their rise. In terms of economic performance, data releases highlighted that the US economy is still at risk of higher-than-expected inflation in the near term. Government bond markets started June on the front foot, with yields falling and curves flattening. The excitement really began in the aftermath of the Federal Open Market Committee meeting in the middle of the month, which accelerated the curve-flattening trend globally.

Moving into the quieter summer markets, government bonds began exhibiting big swings. Markets rallied in an environment of relatively thin liquidity and continued central bank purchases. These squeezed yields lower into the middle of August, only for the movements to retrace fully by the end of September. US Treasuries and German Bunds ended the period relatively unchanged. Inflation continued to grab headlines, with energy prices surging. This challenged the 'transitory inflation' narrative, causing an uncomfortable mix for global bonds. Economic activity across most developed regions remained strong. However, there were some worrying signals emerging from China over the property market; property developer, Evergrande, looked set to default on bond payments due. So far, markets assume the potential collapse of the Chinese property market will not derail the global recovery, but risks are clearly rising.

Portfolio review

The portfolio underperformed the benchmark over the period, primarily because of the reflation narrative persisting for longer than we anticipated. The market focused on relatively short-term economic performance (the reopening of the economy after the shutdown), rather than focusing on the longer-term economic issues that are likely to result. A long duration bias in US, Australia and New Zealand detracted; so, too, did short inflation positions. Underweight positions in Italy and France partially mitigated this underperformance, as did a curve flattening bias in US Treasuries. An underweight position in Chinese government bonds was covered, and we ended the period overweight. Looking at foreign exchange, our bias for long positions in the US dollar and defensive positioning versus more cyclical and risk-facing currencies also acted as a drag on performance.

Outlook

The outlook for government bonds remains challenged by inflationary fears about reopening the global economy and record fiscal spending in many regions. Inflationary fears have increased recently, with surging prices pushing expectations higher and challenging the 'transitory inflation' narrative which central banks had adopted post pandemic. Supply shortages are particularly acute in some sectors, and headline inflation figures have moved far beyond earlier expectations. This has proven to be an uncomfortable mix for government bonds over the past month.

Global Bond Fund

Continued

Central bank discussions have centred on the eventual removal of support as economies continued their post-pandemic recovery. The US Federal Reserve (Fed) hinted that a tapering of asset purchases could come towards year-end; at the September meeting, the committee suggested that a quicker pace of tapering, ending purchases by mid-2022 rather than later in the year, was also possible. This was backed up by Fed Chair Powell in his post-meeting communication, in which he did little to push back against hawkish interpretations of the evolving Fed narrative.

US 10-year yields have broken upwards through 1.50%. With headline inflation running close to 5%, there is a risk that inflation remains a more credible threat to valuations in the short term. We also believe the chances of near-term policy errors by central banks have increased. Significant fiscal cliffs are on the horizon across many regions. While governments are likely to provide some support in 2022, this will pale in comparison to the fiscal largesse of the past 18 months.

Global Climate and Environment Equity Fund

For the period ended 30 September 2021

Commencement of Fund

The CSSF approved the Fund for launch on 5 May 2021.

The first net asset value (NAV) calculation for the Fund was on 6 July 2021.

Performance

For the period from 6 July 2021 to 30 September 2021 the value of Global Climate and Environmental Equity – A Accumulation Shares increased by 0.98% compared to a decrease of 1.44% in the benchmark, the MSCI AC World TR USD Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Benchmark return: Source: Lipper, Basis: close of business return, income reinvested, gross of expenses, USD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Equity markets sustained a strong positive momentum for many months. This was underpinned by accommodative monetary and fiscal policy that enabled, alongside vaccine rollouts, a resumption of economic activity. This, in turn, resulted in improved earnings relative to expectations.

In September, however, equities fell. This correction was bought about by many factors. One of the knock-on consequences of Covid-19 has been supply chain disruption that, alongside demand recovering, has brought inflationary pressures. This then led to fears that accommodative monetary policy would be unwound. There were also fears of contagion from highly indebted Chinese property developer Evergrande defaulting on its interest payment.

During the preceding 18 months, society has faced the significant challenge of managing a pandemic and the consequences for economic activity. It is possible though that climate change is an even greater challenge,

certainly if we consider the scale of change that society must go through if we are to mitigate and adapt to it.

This summer, we have seen diplomatic efforts intensify ahead of COP26 so that effective plans are put in place to deliver on the Paris 2015 Agreement to limit global warming to 1.5 degrees by reducing greenhouse gases to net zero by 2050.

The UN body for assessing the science of climate change produced a report during this time, saying that it is unequivocal that humans are to blame for climate change. The UN Secretary-General called this a 'code red' for humanity. The early warning signs are everywhere, as we see an increase in the frequency and severity of weather events.

Portfolio review

Since inception, the Fund has delivered 2.57% (gross) relative to the MSCI AC World Index. It is notable that the Fund sits within the 18th percentile of funds in the Ecology equity Morningstar category.

The Fund performance benefited from holding Tetra Tech, a leading consulting and engineering services firm that has been delivering successful contract wins. We believe it will remain well placed to benefit from the strong secular trends in water and environmental services, crucial to mitigating and adapting to climate change.

The digital-printer manufacturer Kornit Digital outperformed. The company has delivered good results as it attracts new clients and contract wins. The fashion industry that it serves has significant sustainability issues, such as excess production, waste water and carbon dioxide emissions. Its products use no water and its ink is non-toxic and biodegradable. The company produced an impact note this summer that codifies its brand vision of transforming the fashion industry with eco-friendly production-on demand. Elsewhere, consumer care and life sciences business Croda International continued to revise up its earnings due to stronger revenue growth. We believe that this growth has the potential to be sustained. A recent acquisition has transformed its consumer care business, which should deliver faster growth with the benefit that its products have pricing power in an inflationary environment. The company's life science division is also critical to effective drug delivery. The company also has targets to help customers reduce their carbon emissions by up to four times.

On the downside, Ballard Power weighed on returns. The company develops and produces hydrogen fuel cells and these offer zero emissions for transport. Ballard's strategy targets the truck and bus markets in China, Europe and the US. Key to its success is policy-and-order

Global Climate and Environment Equity Fund

Continued

growth, as well as operating risk. In particular, clarification of China's hydrogen policies and subsidies are a potential near-term catalyst for the business. However, because the authorities have not clarified its policy, the shares have drifted lower. Alstom is the second largest rail company globally, making rolling stock and signalling. Rail travel has attractive environmental credentials and this is likely to drive secular growth in the industry. However, the business has struggled to smoothly integrate its Bombardier Transportation acquisition. Lastly, the world's biggest offshore wind farm developer Orsted's shares were weaker due to poor weather conditions eating into profits. This is a temporary issue.

Outlook

Although economic activity continues to recover, the strain that Covid-19 has placed upon society remains. As noted above, there are inflationary pressures that central banks will seek to contain in particular if they risk being more structural than cyclical.

Our premise, however, is that companies that offer climate and environment solutions will see faster and more sustained growth than those that do not. These companies will be the beneficiaries of the significant increase in capital allocated to mitigating climate change, and this capital, in turn, drives future earnings growth.

There will be many phases to this and we use an approach with five pillars to assess and validate the significance of the opportunity to decarbonise.

Global Corporate Bond Sustainable and Responsible Investment Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of Global Corporate Bond Sustainable and Responsible Investment – Z Accumulation Shares increased by 2.16% compared with an increase of 1.92% in its benchmark, the Bloomberg Global Aggregate Corporate Bond (hedged to USD) Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Benchmark return: Source: Lipper, Basis: close of business return, income reinvested, gross of expenses, USD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Corporate bond returns were positive over the period. Both investment-grade and high-yield issues showed positive performance, although the latter did better.

Fears over the impact of Covid-19 on the credit market, particularly high-yield bonds, had dissipated somewhat by the beginning of the period. Economies began emerging from the first lockdown and the major central banks were purchasing corporate bonds through their stimulus programmes. But bond prices fell slightly in October 2020 as investors sold out of riskier debt, concerned about the potential for rising defaults amid uncertainty from rising coronavirus cases and the US election. November saw the upward trend resume on positive news flow stemming from vaccine breakthroughs and a likely Biden presidency. This extended into the end of 2020, driven by vaccine optimism, the Brexit trade deal agreement and US stimulus package.

Rising Treasury yields at the beginning of 2021 affected markets. However, corporate bonds, particularly high-yield debt, managed to weather the storm reasonably well. As government bond yields stabilised, this robust performance continued through August, even as the Fed said it would begin offloading corporate bonds bought through its pandemic support plan. However, corporate bonds fell in September as the latest minutes from the US Federal Reserve's rate-setting committee suggested an increasingly hawkish approach from policymakers. However, data shows that the riskiest borrowers now constitute the largest portion of US high-yield issuance in over a decade. Nevertheless, issuances have remained high, with over US\$270 billion raised in the US high-yield market in the first five months of 2021. High yield continued to outperform investment-grade bonds into the end of the period.

Portfolio review

In terms of individual securities, the top performer was a 2041 issue from Teck Resources. Commodity price strength was supportive for our holding, which also recently benefited from rumours that the company would sell a coal unit. Similarly, the 2047 bonds of oilfield services firm Baker Hughes benefitted from continuing rises in energy prices. In British banks, the 2030 bonds of Virgin Money were among the top performer, as was the 2024 issue from HSBC.

On the downside, negative news flow out of China, regarding the financial health of the property developer Evergrande, weighed on the broader Chinese real estate sector. This led to negative contributions from our holdings in Sunac and Zhenro Properties. A long-dated 2056 issue from US telecommunications firm Verizon also underperformed.

Outlook

Credit markets have enjoyed an extended period of low volatility and stable credit spreads over the summer as strong technicals, coupled with the economic recovery, have provided a near perfect backdrop. While we remain constructive overall on credit, we think we are entering a period of higher volatility compared to the summer. This is driven by a combination of peaking growth and higher inflation rates, as well as China slowing more than expected, including from stresses in its property sector. In addition, while well-flagged, the tapering of the US Fed's asset purchases and the expected reduction in fiscal spending across the developed world, as Covid-19 support measures are phased out, will become headwinds for the market. This is somewhat countered by high savings rates among corporates and consumers, which should counterbalance the fiscal drag. We should get more clarity on the state of the US consumer when JPMorgan, banking barometer of consumer health, reports third quarter earnings on 13 October, followed by more money centres the next day. Furthermore, with more than US\$1.2 trillion debt issued in the US market in the year-to-date, we expect supply dropping in October, as earnings begin, to be a positive technical support for US credit. We also note the latest positive news of a potentially effective new oral drug for Covid-19 developed by Merck, which would support further normalisation of the public health crisis over time.

Global Dynamic Dividend Fund

For the year ended 30 September 2021

Commencement of Fund

The CSSF approved the Fund for launch on 16 July 2020.

The first net asset value (NAV) calculation for the Fund was on 14 October 2020.

Performance

For the period from 14 October 2020 to 30 September 2021 the value of Global Dynamic Dividend – A Accumulation Shares increased by 18.73% compared to an increase of 22.70% in the benchmark, the MSCI AC World NR USD Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Benchmark return: Source: Lipper, Basis: close of business return, income reinvested, gross of expenses, USD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Stock markets globally rose significantly over the 12-month period ended September 30, 2021. Covid-19 was still the dominant factor at the beginning of the reporting period, although stock markets had already begun their recovery from the lows of March 2020.

Supportive monetary and fiscal policy was prevalent over the period. The U.S. Federal Reserve (Fed) maintained the federal funds rate at near 0% throughout the reporting period, while providing support through its bond-buying program. Elsewhere, the European Central Bank (ECB) ramped up its original €1.35 trillion (US\$1.57 trillion) stimulus plan to €1.85 trillion (US\$2.15 trillion) in December 2020. The U.S. Congress passed two additional stimulus packages during the reporting period, with a cumulative total of roughly US\$2.8 trillion. In August 2021, the U.S. Senate passed the US\$1 trillion infrastructure deal.

Global markets fell at the beginning of the reporting period, reversing some recent gains. In November 2020, however, the relatively smooth U.S. presidential election

– coupled with news of three major Covid-19 vaccines – buoyed investor sentiment. This persisted through to the end of 2020 due to the launch of vaccination programs, the approval of stimulus packages, and the UK and the European Union reaching a Brexit trade deal.

Momentum stalled again in January and February 2021, as global bond markets experienced a significant selloff, spurring worries that this could impact the fragile global recovery. The downturn in bond markets also had a negative impact on equities. However, stock markets resumed their upward momentum, driven by economic optimism, vaccine rollouts, central banks' continued accommodative monetary, and a strong corporate earnings reporting season. The MSCI World Index reached a record high in August 2021, but sold off in September amid investors' growing concerns over inflation and possible interest-rate hikes from central banks. Uneasiness about the global economy led to a selloff across most equity markets across the globe.

Portfolio review

The Fund's performance relative to the benchmark MSCI AC World Net Index for the reporting period was hampered mainly by stock selection in the industrials and real estate sectors. The largest individual stock detractor from Fund performance was Barrick Gold Corp., a mining company that produces gold and copper. The company reported solid early in the reporting period, but this was offset by 2021 guidance that was slightly disappointing in terms of production and costs. The market has been disappointed that Barrick Gold's earnings growth has lagged that of its peers. Furthermore, the price of gold declined over the reporting period. Shares of Ping An Insurance moved lower over the reporting period due to investors' concerns regarding the life insurance industry and about the firm's China property exposure. Casino operator Las Vegas Sands' stock price declined as Macau fell victim to a minor outbreak of Covid-19 and effectively closed its borders. In addition, there is uncertainty around the Macau concession renewal.

Stock selection in the consumer discretionary, financials and communication services sectors bolstered Fund performance for the reporting period. The primary contributor to performance among individual stocks was the lack of exposure to Alibaba Group. Shares of the Chinese e-commerce giant declined over the reporting period as Chinese regulators opened an anti-trust investigation into the company. Blackstone Inc. consistently reported strong quarterly results during the reporting period. The c alternative asset manager benefited from both good financial performance and strong inflows. The company is profiting from its investments in retail and is raising a significant amount of

Global Dynamic Dividend Fund

Continued

capital in its Blackstone Real Estate Income Trust (BREIT) and Blackstone Private Credit (BCRED) funds. In addition, Blackstone continues to grow its asset management business for insurance clients, as the company recently reached an agreement to manage assets for AIG (which the Fund does not hold). Diversified financial services company Goldman Sachs Group saw healthy year-over-year revenue growth over the reporting period, buoyed mainly by notable strength in its Asset Management, Investment Banking and Global Markets units. Investors viewed this as evidence that the new management team is on the path to improving shareholder returns over the medium term through various revenue and expense initiatives.

Outlook

Global stocks may be headed for a period of volatility as investors mull conflicting signals. Developed western economies seem to be recovering at a steady clip as they emerge from the effects of the previous Covid-19 wave. The resumption of business though, has met with supply side constraints, which has pushed raw materials and product prices higher, prompting key central banks to closely monitor inflationary pressures and consider appropriate tightening measures. Elsewhere, while the coronavirus appears to be endemic, the accelerating pace of vaccine production and inoculations should help many countries achieve herd immunity in the near future and to keep their economies open.

Amid the sentiment-driven market conditions, we remain committed to our fundamental analysis-based stock-picking strategies. This is supported by our proprietary research platform and staffed by an experienced team that has successfully navigated many past crises. Consequently, we continue to seek attractively valued companies that in our view have resilient, well-run businesses that are adapting well to the changing landscape, and are poised for the growth recovery, while actively engaging with management to ensure robust corporate governance and environmental sustainability standards.

Global Government Bond Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of Global Government Bond – A Income Shares decreased by 10.43% compared to a decrease of 7.31% in the benchmark, the FTSE World Government Bond TR USD Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, GBP.

Benchmark return: Source: Lipper, Basis: close of business return, income reinvested, gross of expenses, GBP.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

The global economy began to recover at the beginning of the review period, following the unprecedented economic decline of the second quarter of 2020. That recovery was driven by ultra-loose monetary and fiscal policy across the globe. The US led the way, particularly in terms of fiscal support. The Democratic Party regained both the White House and the Senate, resulting in unified control of the executive and legislative branches of government. The new administration's stated goals were to deal with the aftermath of the Covid-19 pandemic, while pushing a bold agenda of government-funded spending and investment. A series of spending bills were passed, forcing eye-watering quantities of money into the US economy. Growth and inflation expectations rose substantially, bolstered by an impressive vaccine rollout in the US. This combination of loose economic policy and rising investor optimism saw the 10-year US Treasury yield rise by over 100 bps in the first six months of the review period. Global yields followed, with varying degrees of economic justification.

Global government bonds delivered mixed performance between April and June but rose in aggregate (yields fell). In April, US Treasuries rallied and outperformed other markets, particularly those in Europe, which moved higher in yield. May was a relatively choppy month for sovereign bonds, with the main theme once again being European underperformance versus other markets. A fall in commodity prices aided this and led to inflation expectations falling, or at least pausing briefly in their rise. In terms of economic performance, data releases highlighted that the US economy is still at risk of higher-than-expected inflation in the near term. Government bond markets started June on the front foot, with yields falling and curves flattening. The excitement really began in the aftermath of the Federal Open Market Committee meeting in the middle of the month, which accelerated the curve-flattening trend globally.

Moving into the quieter summer markets, government bonds began exhibiting big swings. Markets rallied in an environment of relatively thin liquidity and continued central bank purchases. These squeezed yields lower into the middle of August, only for the movements to retrace fully by the end of September. US Treasuries and German Bunds ended the period relatively unchanged. Inflation continued to grab headlines, with energy prices surging. This challenged the 'transitory inflation' narrative, causing an uncomfortable mix for global bonds. Economic activity across most developed regions remained strong. However, there were some worrying signals emerging from China over the property market; property developer, Evergrande, looked set to default on bond payments due. So far, markets assume the potential collapse of the Chinese property market will not derail the global recovery, but risks are clearly rising.

Portfolio review

The portfolio underperformed the benchmark over the period, primarily because of the reflation narrative persisting for longer than we anticipated. The market focused on relatively short-term economic performance (the reopening of the economy after the shutdown), rather than focusing on the longer-term economic issues that are likely to result. A long duration bias in US, Australia and New Zealand detracted; so, too, did short inflation positions. Underweight positions in Italy and France partially mitigated this underperformance, as did a curve flattening bias in US Treasuries. An underweight position in Chinese government bonds was covered, and we ended the period overweight. Looking at foreign exchange, our bias for long positions in the US dollar and defensive positioning versus more cyclical and risk-facing currencies also acted as a drag on performance.

Outlook

The outlook for government bonds remains challenged by inflationary fears about reopening the global economy and record fiscal spending in many regions. Inflationary fears have increased recently, with surging prices pushing expectations higher and challenging the 'transitory inflation' narrative which central banks had adopted post pandemic. Supply shortages are particularly acute in some sectors, and headline inflation figures have moved far beyond earlier expectations. This has proven to be an uncomfortable mix for government bonds over the past month.

Global Government Bond Fund

Continued

Central bank discussions have centred on the eventual removal of support as economies continued their post-pandemic recovery. The US Federal Reserve (Fed) hinted that a tapering of asset purchases could come towards year-end; at the September meeting, the committee suggested that a quicker pace of tapering, ending purchases by mid-2022 rather than later in the year, was also possible. This was backed up by Fed Chair Powell in his post-meeting communication, in which he did little to push back against hawkish interpretations of the evolving Fed narrative.

US 10-year yields have broken upwards through 1.50%. With headline inflation running close to 5%, there is a risk that inflation remains a more credible threat to valuations in the short term. We also believe the chances of near-term policy errors by central banks have increased. Significant fiscal cliffs are on the horizon across many regions. While governments are likely to provide some support in 2022, this will pale in comparison to the fiscal largesse of the past 18 months.

Market review

Global stock markets rose significantly over the past 12 months. Covid-19 was still the dominant factor at the beginning of the period, although stock markets had already begun their recovery from the lows of March 2020. Supportive monetary and fiscal policy was prevalent over the period.

Markets fell at the beginning of the period, reversing some recent gains. In November 2020, however, the relatively smooth US presidential election, coupled with news of three major Covid-19 vaccines, buoyed sentiment. This persisted through to the end of 2020 due to the launch of vaccination programmes, the approval of stimulus packages, and the reaching of a Brexit trade deal.

Momentum stalled again in January and February 2021 as global bond markets experienced a marked sell-off, spurred by worries of higher inflation. However, equity markets resumed their upward momentum, driven by economic optimism, vaccine rollouts, continued accommodative monetary policy, and a strong corporate reporting season. After performing well during August, stock markets sold off in September, as concerns surfaced over supply chain bottlenecks, inflation, and interest rate hikes.

Portfolio review

Our holding in Kornit Digital, a manufacturer of digital textile printers, benefitted the Fund when its shares reacted positively to news of new client wins and partnerships. Additionally, the company reported impressive results, more than doubling sales over a 12-month period. The company continued to innovate and expand into new areas, thereby opening up fresh opportunities. Kornit's latest product is witnessing decent order momentum; it is a tool that serves to improve efficiencies between apparel brands and retailers and the fulfilment channel. US-listed law enforcement solutions business Axon added value. The business continued to see a steady flow of contract wins for its Taser weapons, body cameras, and crime recording solutions. The company's products are designed to de-escalate the use of force (from live firearms) and improve the transparency and efficiency of police work. WuXi Biologics, the Chinese Hong Kong-listed biologics outsourced manufacturing and services company, outperformed on good results. The company continued to grow its market share, making progress with new contract wins to help develop vaccines. The stock has avoided China's regulatory crackdown as its business of pharmaceutical testing and laboratory services plays well to the government's drive to promote development of a domestic life science sector. The business also received a boost when it was granted its first manufacturing licence from Japan.

By contrast, detracting from performance was our holding in British-Dutch online food delivery company Just Eat Takeaway. Its shares pulled back after peaking in October as Covid-19 vaccinations raised the prospect of quicker reopening and consumers returning to restaurants.

Elsewhere, our holding in recent initial public offering Alphawave IP, a semiconductor designer that licences its intellectual property to microchip manufacturers, saw its share sell off after a negative press article. This questioned close ties to recent contract wins in China, which were not disclosed in its listing documents. Chinese internet companies have underperformed in general. This included our holding in Tencent, the Chinese online value-added service business, such as mobile gaming. The Chinese government's move to investigate online video gaming continued to weigh on the businesses. This intensified after the authorities broadened its scope.

Outlook

Investors tend to sell highly valued stocks when bond yields rally; this reaction may prove short sighted. Companies which are likely to fare best in the coming earnings season are those that have a clear competitive advantage or are well-run. Many of these trade at premium multiples.

Global Innovation Equity Fund

Continued

Anecdotally, some of the supply chain bottlenecks emanating from manufacturing hubs in Asia are now easing. Some raw material cost pressures are also lessening. It is also noteworthy that China's manufacturing activity has experienced a small contraction. In the West, we await the effect on labour participation from the withdrawal of government support schemes. All of these factors suggest that supply chain pressure could start to moderate before year-end. Overall, equity market performance may be tempered by gradual monetary policy normalisation and potentially higher taxation. As always, we recommend sticking to stocks with high quality business models, visible earnings growth and long-term prospects.

Market review

Globally, stock markets rose significantly over the past 12 months. Covid-19 was still the dominant factor at the beginning of the period, although stock markets had already begun their recovery from the lows of March 2020.

Supportive monetary and fiscal policy was prevalent over the period. The US Federal Reserve (Fed) maintained the main US rate at near zero throughout the review period, while providing support through its bond-buying programme. Elsewhere, the European Central Bank (ECB) ramped up its original €1.35 trillion stimulus plan to €1.85 trillion in December 2020. The US Congress passed two additional stimulus packages during the period, cumulatively worth around US\$2.8 trillion. In August 2021, the US Senate passed the US\$1 trillion infrastructure deal.

Markets fell at the beginning of the period, reversing some recent gains. In November 2020, however, the relatively smooth US presidential election – coupled with news of three major Covid-19 vaccines – buoyed sentiment. This persisted through to the end of 2020 due to the launch of vaccination programmes, the approval of stimulus packages, and the reaching of a Brexit trade deal.

Momentum stalled again in January and February 2021 as global bond markets experienced a marked sell-off, spurring worries that this could impact the fragile global recovery. This also negatively affected equities. However, equity markets resumed their upward momentum, driven by economic optimism, vaccine rollouts, continued accommodative monetary policy and a strong corporate reporting season. After a strong August, stock markets sold off in September, as concerns grew over inflation and interest rate hikes. Economic unease led to selling across the globe, although Japanese markets rose.

Portfolio review

US backup generator maker Generac's shares made significant gains as its results and earnings guidance were both ahead of market expectations. The company is seeing an unprecedented level of demand for its home standby generators as power outages in the US become more frequent and erratic. Chalease is a diversified lease operator in Taiwan, China and SE Asia. Smaller companies are typically underserved by traditional banks. Leasing remains underpenetrated, particularly in China. Chalease's strength lies in its risk management, and the company has continued to deliver good results with strong sales growth while maintaining good asset quality. Elsewhere, MSCI also added value. The leading data supplier to the investment industry enjoys a high barrier to entry, as it is at the forefront of financial services innovation, successfully leveraging its data capabilities, brand and client relationships to expand its offering. MSCI enjoys subscription-based recurring revenues and healthy margins, driven by high profitability that is enabling it to continue delivering better-than-expected results. This has been evident by strong growth in the company's Index and ESG & Climate segments.

By contrast, Amedisys, the healthcare-at-home and hospice operator, weighed on returns. The pandemic has proved challenging for the US company, with the length-of-stay per patient falling and fewer new hospice admissions. The company gave lower earnings guidance, with margins strained from rising wage costs. Elsewhere, Veeva, a software-as-a-service (SaaS) company for the life science industry underperformed. Although it is a high quality company with strong market share, its results have not been enough to justify its premium valuation, leaving investors disappointed. The stock has now been sold. Lastly, UK-based engineering software developer Aveva Group's shares declined following weaker-than-expected earnings due to the pandemic's effects. However, we believe that the company is poised to benefit from medium and long-term structural growth drivers, such as automation of industrial processes.

Global Mid-Cap Equity Fund

Continued

Outlook

Investors tend to sell highly valued stocks when bond yields rally. This reaction may prove short sighted. Companies which are likely to fare best in the coming earnings season are those that have a clear competitive advantage or are well-run. Many of these trade at premium multiples.

Anecdotally, some of the supply bottlenecks emanating from manufacturing hubs in Asia are now easing. Some raw material cost pressures are also lessening. It is also noteworthy that China's manufacturing activity has experienced a small contraction. In the West, we await the effect on labour participation from the withdrawal of government support schemes. All of these factors suggest that supply chain pressure could start to moderate before year-end. Overall, equity market performance may be tempered by gradual monetary policy normalisation and potentially higher taxation. As always, we recommend sticking to stocks with visible earnings growth and upward momentum bias.

Indian Bond Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of Indian Bond– A Accumulation shares increased by 4.57% compared to an increase of 4.81% in the benchmark, Markit iBoxx ALBI India Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Benchmark return: Source: RIMES, Basis: close of business return, income reinvested, gross of expenses, USD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Indian government bonds were largely stable over the year, and was the third best performing market in Asia, behind China and Indonesia where yields fell. Considering a backdrop that saw 10-year US Treasury yields rising by 80 basis points (bps), alongside other markets in Asia such as Singapore, Malaysia and Korea where yields also rose by 70-80bps, the market found itself in a reasonably tight range over the period. 10-year yields saw a low of 5.8% in December 2020 and yield high of 6.3% in August 2021, ending the review period just 20bps higher. The short end of the curve had a wider range, with 3-year seeing a yield low of 4.7% in January 2021 and a high of 5.5% in March 2021, nevertheless ending the review period 35bps lower. The main factors influencing investor sentiment were Covid-19, Reserve Bank of India's (RBI) policy, food inflation and oil prices. At the start of the year, government-bond yields rose as infection cases in the country stabilised and it seemed that India had averted the worst of the health crisis, with growth recovering, coinciding with the market pricing in policy normalisation in the first quarter of 2021. This changed in March 2021, when the nation faced a devastating second wave due to the advent of more infectious variants and a shortage of medical supplies and vaccines. To tackle the medical crisis, the central bank stayed accommodative and extended aid to the healthcare and related sectors, while maintaining ample liquidity to support the market, resulting in investors pricing out a large part of the policy normalisation previously expected. Subsequently, the country emerged from the crisis and this along with a considerable pickup in vaccination rates supported risk sentiment. However the RBI had successfully guided the market to expect a very gradual pace of policy normalisation. Direct purchase of bonds by the RBI via the Government Securities Acquisition Programme (GSAP) also provided support, however towards the end of the period, given the strength of the economic recovery, the RBI indicated it would transition away from this, which alongside the rise in oil prices exerted some upward pressure on longer-dated yields.

Meanwhile, commodity prices, particularly for crude oil, rose and the US dollar strengthened. Rising oil prices dampened investors sentiment and raised concerns over the increasing trade deficit, which ballooned to US\$23 billion, its largest ever. This heightened rupee volatility, which finished the year 0.6% lower, again relatively tame in the context of broader emerging market currencies and not surprising given support from things like IPO and equity flows, and forex reserves of almost \$640 billion. Economic data continued to point to a recovery, with leading manufacturing indicators expanding to 53.7 from 52.3. Services and industrial production also recovered as the pandemic situation in the country improved.

Portfolio review

Over the year on an absolute basis, the Fund advanced by 6.5% with the biggest drivers being interest rates, contributing 5% of this and exposure to local-currency credit adding an additional 1.5%, while foreign exchange detracted approximately 0.7%. The portfolio outperformed its benchmark by 1.7% supported by allocations to credit and curve strategies. Outperformance versus the core peer group was also strong, with the Fund comfortably seeing top-quartile performance.

Outlook

While India has recovered from its second wave, there continues to be some trepidation that it may face a third wave of infections. The risk stems from the festival season between September and November. Daily cases have remained low and vaccinations administered per day have increased several fold as supply more than doubled since April this year. The country is so far avoiding a third wave even as festival season picks up. Indeed the authorities expect most of the eligible population to be vaccinated by early 2022. Fiscal performance has also been strong, with the fruits of tax reforms beginning to be seen in what should be a structurally higher level of tax revenue generation, facilitating fiscal consolidation and lowering the risk of additional bond issuance. At the start of October, Moody's shifted India's ratings outlook from Negative to Stable as a result of the better than expected economic performance. The economy continues to reopen, which has supported economic data, and the government is committed to an aggressive capex programme, with a focus on things like metro and high speed railways and renewable energy. Other reforms announced are a National Monetisation Pipeline (NMP) of 6 trillion rupees, close to 2.6% of GDP, with about 900 billion rupees targeted for this fiscal year, to increase revenue by monetising existing brownfield infrastructure assets. And the formation of the National Asset Reconstruction

Indian Bond Fund

Continued

Company (NARCL), tasked with resolving non-performing assets that remain in the system. Inflation remains elevated, driven by pipeline pressures from fuel and food, but eased to 5.3% in August. Fortunately, the monsoon improved in September, likely to result in a decent harvest season and minimise risks from food inflation. The RBI is comfortable with inflation above 4% in the medium term, implying a possible slower pace of normalisation.

With respect to portfolio strategy, the belly of the curve remains steep, with attractive roll-down, and a 2-year to 5-year curve of around 140bps. We continued to invest in 4-8-year government bonds generally due to the steepness of the belly of the curve relative to the front-end. This will be an important strategy in terms of providing attractive yields, but more stable returns as they roll down the curve. Corporate bonds have performed well but with spreads on the tighter side, we have reduced corporate exposure and rotated into government bonds, which are now almost 70% of the portfolio, versus closer to 30% at the start of the review period, with quasi-government bonds around 23%, resulting in a high quality portfolio. The Fund is more than 2-years short duration versus the benchmark, reducing sensitivity to some of the pressure being exerted on the longer end of the curve, particular as RBI support is reduced in 10-year tenors. The Indian rupee has been weak more recently but still relatively stable compared to its regional and emerging market counterparts, amid rising oil prices, and potentially reaching levels where particularly after some real effective exchange rate depreciation coming into October, intervention by the RBI is more likely.

Market review

Indian equities rose sharply and posted significant gains of more than 50% in the review period, largely due to positive market sentiment that was underpinned by the strengthening recovery in corporate earnings. This was in spite of a spike in infections arising from the more contagious delta coronavirus. Fears were allayed by companies quickly adapting to the pandemic, as well as by the government's accelerated push to inoculate the population. A generous pro-business Budget in the first half, especially in terms of extensive infrastructure investment, was a also boon to companies in the financials, housing and industrials sectors. Unsurprisingly, leading the market's gains were the property sector, which was also amplified by the central bank's accommodative monetary policy that allowed lenders to cut mortgage loan rates, alongside stamp-duty rebates offered in some states. Elsewhere, technology companies were buoyed by a multi-year upgrading cycle, while returning business confidence supported increased capital spending across most sectors. Positive policymaking also gave the communications sector a helping hand, particularly with a relaxation of foreign-ownership limits, as well as allowing network operators to defer payment on telecommunications spectrum fees and other liabilities by four years.

Portfolio review

Against this backdrop, the Fund rose sharply, but lagged its benchmark.

At the stock level, the lack of exposure to lender ICICI Bank and non-banking financial company Bajaj Finance cost the Fund, with most financial-sector stocks having had a good run on the back of rosier expectations as the government re-opens the economy. For ICICI Bank, it also posted the best growth among the large private-sector banks and improved its net interest margins. However, we continue to maintain our preference for the other private-sector banks that should similarly benefit as the economy returns to growth. Meanwhile, Bajaj Finance reported a solid second-quarter business update that supported its share price. Also detracting was our exposure to Sanofi India after it posted disappointing results and more recently, its share price was dented by news that its best-selling insulin product would be added to a national list of essential medicines that are subject to price controls.

In contrast, not holding benchmark heavyweight Reliance Industries aided performance, as its telecommunications business suffered from Bharti Airtel's ability to gain better-quality customers. Despite the restructuring of Reliance's oil and chemicals segments, we maintain our reservations about its aggressive seeding of businesses and subsequent write-offs, as well as capital allocation and the treatment of minority shareholders. As mentioned above, the recovering demand for homes helped real estate company Godrej Properties post robust sales, which in turn boosted its share price. In the IT services sector, companies benefited from the rapid shift towards digitalisation, a trend that the pandemic had triggered worldwide. The Fund's holding in Mphasis performed particularly strongly, helped by record deal wins and bumper earnings, while the work-from-home trend propelled digital transformation and cloud migration, boosting demand for its services.

In key portfolio changes, we participated in the initial public offerings (IPOs) of Zomato and Aptus Value Housing Finance. We also initiated ReNew Energy Global and IndiaMart InterMesh. Zomato did very well on its market debut. It is one of two companies in India that offers integrated online food ordering and delivery services, a dynamic and fast-growing sector of the internet ecosystem. Aptus Value Housing Finance is an affordable housing company with a firm foothold in South India. ReNew generates electricity from a mix of wind, solar, and more recently hydro-power. Our research concluded that it has both scale and clarity around its pipeline. More importantly, it is funded fully for its capacity build-out. We also like that its management has shown discipline in bidding at renewable energy auctions. Last, IndiaMart

Indian Equity Fund

Continued

is the dominant, subscription-based online business-to-business platform for industrial and office supplies.

In the interim report, we had already mentioned the introduction of Azure Power Global, a leading solar-farm operator, given the bright outlook for renewable power supply in India. Its construction pipeline should transform the scale of the business into one of the largest solar portfolios domestically.

Against these, we sold Bandhan Bank to manage the Trust's exposure to non-performing microloans, particularly in view of a protracted pandemic. We also participated in the IPO of Clean Science & Technology but exited this specialty chemicals player following its stellar debut.

Outlook

India is continuing to re-open its economy, helped by the stabilising situation as vaccinations are rolled out and as infection rates decelerate despite the advent of the Delta strain. As we had expected, there has been a diminishing impact from the most recent wave, given how businesses and the authorities have learnt to adapt to earlier outbreak. We continue to hope that the government would be able to boost the country's healthcare infrastructure so that it is able to better handle future surges. For now, any disruption, coupled with sustained inflationary pressure, could put a speedbump in the path to an earnings recovery. This makes us remain circumspect about valuation multiples and growth expectations currently priced in by the Indian stock market.

However, this does not change our view that India remains an attractive market to invest in for the long term. The domestic market benefits from a rapidly growing middle-class that is increasingly affluent. Digital adoption has accelerated and we expected to see more listed investment opportunities in the new-economy space. Ultimately, India is home to many of Asia's most successful companies that have been tested by prior economic crises. As ever, we remain highly selective in our portfolio positioning, preferring high-quality companies with robust balance sheets and led by good management that helps them weather storms better than most. We remain focused on identifying companies with clear prospects for earnings growth, a secure competitive position, and prudent capital management. These companies should deliver sustainable returns over time.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Equities in Japan increased over the 12 months. In late 2020, the Japanese equity market rose, continuing the recovery from losses earlier in the year. Japan, like other global markets, saw a divergence with 'new economy' companies surpassing those in the 'old economy' and virtual world gaining at the expense of the physical world. Accordingly, valuations of digital companies became extended. As the year progressed, it became evident that early prognoses of the pandemic's impact were much harsher than reality. Many Japanese corporates reaffirmed our view that they would yet again be able to lower expenses when faced with harsh business conditions and, in some cases, swiftly pivot to capture rising opportunities in the new normal.

Coming into this year, Japanese equities continued rising on the back of receding political uncertainty in the US, falling Covid-19 infections across the world, and positive news flow around fiscal and monetary stimulus. The rise in market has been led by 2020's laggards, while 2020's outperformers have fallen behind. This rotation was aided by higher bond yields and inflation expectations, as low valuation cyclicals and interest rate sensitive financials outperformed the market. We tend to avoid these areas of the market, due to ESG and structural concerns.

On the political front, Prime Minister Yoshihide Suga's approval rating had fallen as the government was

criticised for its handling of the pandemic, leading many to question the decision to go ahead with hosting the Olympics. Suga's resignation triggered a leadership election; Fumio Kishida, the policy chief of the ruling party Liberal Democratic Party and former foreign minister, was elected, becoming Japan's new prime minister. During the presidential campaign, Kishida called for a 30 trillion yen stimulus package to revive the economy and vowed to reduce the number of people without access to Covid-19 medical care to zero. We do not expect major policy shifts as a result of the change in prime minister.

Portfolio review

At the individual stock level, the top performing holding was Misumi Group, a manufacturer of precision components used in factory automation. Shares of the company rose, as investors foresee sustained growth. The company is capable of supplying its products to customers quickly and improving margins after strong results. Industrial gas producer Nippon Sanso rose on investor expectations for an earnings recovery. Elsewhere, the HR technology platformer Recruit Holdings also performed well, after publishing better-than-expected quarterly results and revising its full-year guidance upwards. Strong demand for hiring in the US was particularly supportive.

On the downside, the biggest detractor was Nippon Paint Holdings. The paint and protective coatings manufacturer fell as investors fear the impact of rising oil prices on the firm's raw materials. Investors took profits from Welcia amid concerns over its management's conservative forecast for the second half and following a robust share-price rally during 2020. Z Holdings also fell on profit-taking after strong gains in 2020.

In the review period, we sold five companies in favour of more attractive opportunities elsewhere: bicycle-components maker Shimano, IT services company SCSK, pharmaceutical company Shionogi, retail conglomerate Seven & i Holdings, and East Japan Railway.

With the proceeds, we initiated six companies which we believe have unique business models that lead to wide competitive moats in their respective sectors. These include Open House, which builds affordable detached housing in the greater Tokyo area and focuses on land plots that are too small or challenging for peers to develop. Next, Freee is a pioneer in providing cloud-based accounting software to Japan's small and medium-sized enterprises. Subsequently, we introduced Monotaro, an e-commerce company that focuses on industrial products. Then, we initiated Tokyo Electron, the third-largest semiconductor equipment maker in the world. We also took a position in Murata Manufacturing, a global leader in the development of electronic components.

Japanese Equity Fund

Continued

Finally, we added IT solutions provider NEC, which is well-positioned to benefit from the build-out of Japan's 5G network and government digitalisation efforts.

Outlook

Prospects for Japanese equities are looking up amid a global economic recovery. In Japan, a ramp-up in vaccinations and the reopening of economies in North America and Europe should benefit Japanese corporates with local as well as overseas operations. We believe the portfolio is poised to reap the benefits of these developments, and that valuations remain reasonable against the improving outlook of our holdings.

Market review

Equities in Japan increased over the 12 months. In late 2020, the Japanese equity market rose, continuing the recovery from losses earlier in the year. Japan, like other global markets, saw a divergence with 'new economy' companies surpassing those in the 'old economy' and virtual world gaining at the expense of the physical world. Accordingly, valuations of digital companies became extended. As the year progressed, it became evident that early prognoses of the pandemic's impact were much harsher than reality. Many Japanese corporates reaffirmed our view that they would yet again be able to lower expenses when faced with harsh business conditions and, in some cases, swiftly pivot to capture rising opportunities in the new normal.

Coming into this year, Japanese equities continued rising on the back of receding political uncertainty in the US, falling Covid-19 infections across the world, and positive news flow around fiscal and monetary stimulus. The rise in market has been led by 2020's laggards, while 2020's outperformers have fallen behind. This rotation was aided by higher bond yields and inflation expectations, as low valuation cyclicals and interest rate sensitive financials outperformed the market. We tend to avoid these areas of the market, due to ESG and structural concerns.

On the political front, Prime Minister Yoshihide Suga's approval rating had fallen as the government was criticised for its handling of the pandemic, leading many to question the decision to go ahead with hosting the Olympics. Suga's resignation triggered a leadership election; Fumio Kishida, the policy chief of the ruling party Liberal Democratic Party and former foreign minister, was elected, becoming Japan's new prime minister. During the presidential campaign, Kishida called for a 30 trillion yen stimulus package to revive the economy and vowed to reduce the number of people without access to Covid-19 medical care to zero. We do not expect major policy shifts as a result of the change in prime minister.

Portfolio review

At the individual stock level, the top performing holding was Sanken Electric. The stock rose when, early in 2021, the company listed its US subsidiary. Waste management company Daiseki rose after publishing good results and as investors expect the favourable environment to continue. Furthermore, asset management platform WealthNavi rose on strong results and investor expectations for sustained AUM growth.

On the downside, the biggest detractor was Edulab. The educational software company has come under auditor scrutiny. The company had earlier announced it was delaying disclosure of its June-end quarter results. This was to investigate the economic rationale behind some of the business transactions within the group, on recommendation from its auditor. A special committee set up for investigation later disclosed that another set of transactions around the appropriateness of booking sales came into question. The paint and protective coatings manufacturer Nippon Paint fell, as investors fear rising oil prices would inflate raw material costs. Furthermore, Elecom weighed on performance. Investors sold the electronics company due to a mixed outlook on lower margin expectations.

During the period, we sold 12 companies in light of more attractive opportunities elsewhere: stationary supplier Pilot; camera lens maker Tamron; facilities management service provider Aeon Delight; transportation moving company Sakai Moving Service; Okinawa-based supermarket chain San-A; IT services company SCSK; conference room operator TKP; e-commerce analytics company Plaid; control equipment provider Azbil; voice recognition system developer Advanced Media; HRM solution provider Nittsuisystem (now Kinjiro); and Edtech solutions provider Edulab.

Japanese Smaller Companies Fund

Continued

We used the proceeds to buy several businesses with long-term structural tailwinds and good potential for growth. These included Direct Marketing Mix, Benefit One, Takara Bio, Comforia Residential REIT, Plaid, WealthNavi, Takuma, Taoka Chemical, Transaction, Coconala, Appier, Wingarc1st, Matsuda Sangyo, Daiseki and JSB.

Direct Marketing Mix provides telemarketing and consulting services to help telecom and utility companies acquire new customers in a more cost-effective manner than companies would through their brick-and-mortar store network.

Benefit One is the largest provider of fringe benefits in Japan and works with companies to manage employee benefit programs; this is an increasingly important perk for companies to retain employees. Given its rolodex of corporate clients and expertise in HR services, we believe the company is uniquely positioned to initiate new programs and services.

Takara Bio is a leading research reagent manufacturer. It also operates state-of-the-art facilities for contract development and manufacturing (CDMO) for the burgeoning fields for gene therapy and regenerative medicine. Takara Bio has been conducting research in gene therapy for decades. These efforts led to its development of a platform to support bio-ventures and research institutions in Japan, with an eventual goal of building a broader drug discovery platform. We believe its business profile is highly attractive: the research reagents business, which includes PCR tests for Covid-19, tends to be very stable; its broad portfolio of reagents lowers the risk of the business; and the rising cost of research in the biotech industry has led to a need for outsourcing of development and production.

Comforia Residential REIT focuses on providing high-end single occupancy condos in central Tokyo, for which the supply-demand balance remains tight, as working singles continue to migrate into Tokyo at a much faster pace than new supply is being built. It retains a strong position to capture this demand, given its high brand-recognition in this sub-market and the strong pipeline of projects from its sponsor Tokyu Fudosan.

Plaid is a provider of customer experience SaaS. Its KARTE brand of data analytics solutions collect and analyse online user activity on a real-time basis. Given its timely analysis, website and app operators can visualize and interact with customers on a more personalised and effective basis to improve conversion rates. However, we closed our position given the share price's rapid rise and unjustifiable valuations.

WealthNavi's roboadvisory business has sizable growth prospects, as it targets a growing segment of relatively

young consumers who are tech-savvy and are struggling to invest excess savings in an ultra-low interest rate environment. We look for the company's first mover advantage, operational know-how and the friendly interface to drive strong growth. Again, IPO valuations were demanding, but justifiable given its large addressable market and strong positioning of its business model.

Takuma is Japan's leading provider of waste treatment and biomass power plants. The company has been successfully raising the proportion of higher-margin replacement business as aging plants enter a replacement cycle. The company also has a long track record for providing biomass power plants, positioning itself well to capture the expected rise in renewable energy demand under Japan's de-carbonisation plans.

Taoka Chemical is a global leader in niche specialty chemicals used to manufacture high-grade camera lenses in smartphones. The chemical maker has other competitive products such as insulating varnish used in motor coils for electric and hybrid vehicles, leveraging on its production and technological expertise built up over many years as a subsidiary of a major materials group.

Transaction is a supplier of novelty goods and promotional merchandise. We initiated a position given its unique business model and improving outlook.

Coconala provides an online matching platform for knowledge, skills and services. In our view, the company is entering a virtuous cycle whereby more transactions lead to more reviews, leading to better visualisation of sellers' skills and buyer demand.

Appier is an AI-based marketing support tool provider, helping users make better data-driven decisions. Its proprietary and differentiated algorithms help identify more valuable customers, enabling targeted ads and coupons to improve customer conversion rates.

Wingarc1st is a pioneer in digital ledger solutions in Japan that is poised to benefit from digitisation demand for corporate documents and forms. The company is also able to use the recurring earnings from its existing base of sticky customers to develop and cross-sell new solutions such as data management tools.

Matsuda Sangyo is a leading company in precious metal recycling and industrial waste treatment. The company has a track record of protecting security and confidentiality, metal extraction and processing know-how, as well as nationwide collection networks; this positions it well to capture structural growth opportunities from higher recycling needs on the back of greater environmental awareness by corporates and tightening environmental regulations in Japan, China and Southeast Asia.

Japanese Smaller Companies Fund

Continued

Daiseki is the largest industrial liquid waste management company in Japan that is uniquely positioned to grow market share as increased regulation and succession issues consolidate the market. Furthermore, we look for clients to accelerate consolidation as corporates concentrate their waste with facilities that meet higher industry standards, have good track records and have efficient processes that minimize residuals and emissions.

JSB is the largest provider of university housing in Japan. As the sole integrated player in this space, we believe the company is uniquely positioned to grow market share in a steady market. Furthermore, we look for JSB's cash generation and thus, balance sheet, to improve as it makes a more meaningful shift towards a subleasing business model.

Outlook

Prospects for Japanese equities are looking up amid a global economic recovery. In Japan, a ramp-up in vaccinations and the reopening of economies in North America and Europe should benefit Japanese corporates with local as well as overseas operations. We believe the portfolio is poised to reap the benefits of these developments and that valuations remain reasonable against the improving outlook of our holdings.

Latin American Equity Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of Latin American Equity – A Accumulation Shares increased by 16.14% compared to an increase of 27.76% in the benchmark, the MSCI Emerging Markets Latin America 10/40 NR Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Benchmark return: Source: Lipper, Basis: close of business return, income reinvested, gross of expenses, USD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Latin American equities advanced alongside other global stocks over the year under review, but the benchmark's double-digit return masked substantial volatility. Sentiment was largely upbeat amid strengthening prospects for the global recovery, underpinned by the rollout of Covid-19 vaccines and re-opening of economies worldwide. Although some Latin American countries' inoculation campaigns were initially beset by supply constraints, most made steady progress subsequently. The rosier global outlook also lifted commodity prices, which bolstered the region's export-oriented markets.

However, new challenges blunted share prices' momentum. Notably, the rebound in growth and activity triggered faster inflation, compelling several central banks to begin raising interest rates. This was compounded by fears that the US Federal Reserve could start tapering policy sooner than expected. Rising political risks added further unease. In Brazil, worries grew over its stretched fiscal position and rising tensions between President Jair Bolsonaro and the Supreme Court. In Chile, there were concerns about radical proposals in the new constitution, whereas Colombia was rocked by large-scale protests against an unpopular tax reform. As for Peru, investors were wary of more populist policy changes with the surprise election of leftist Pedro Castillo as president.

Portfolio review

The Fund trailed the benchmark. This was chiefly due to poor stock selection, particularly in the smaller-cap segment, where some of our holdings suffered amid a shift in investor preferences. While we took some steps to address these weaknesses, we believe the indiscriminate selloff may be unwarranted as the negative drivers of performance are likely to be temporary.

Our stock picks in Brazil detracted the most. Notably, several of our newly-initiated, growth-oriented holdings were caught in a rotation towards more liquid stocks. Online furniture seller Mobly, for instance, suffered from a short-term slowdown as easing restrictions aided traditional brick-and-mortar stores. Logistics company Sequoia fell on concerns of lower margins as management decided to prioritise growth over profitability. Education systems provider Arco Platform faced challenges in securing new clients with schools closed. We have revisited our investment cases for these names. We concluded that not only have these companies' stayed true to executing their strategies, but their fundamentals remained sound as well. Moreover, they provide exposure to attractive long-term growth trends.

Another area of weakness was the Fund's exposure to real estate. Chilean mall operator Parque Arauco retreated due to ongoing Covid-19 restrictions and domestic political concerns, while approval of early pension-fund withdrawals also dampened local stocks. Against this backdrop, we have kept our exposure to the mall segment in check. However, we retain confidence about the quality of Parque Arauco's portfolio and believe it is well-placed to gain as reopenings gather pace.

The underweight to the material sector also dragged on performance, with mining stocks benefiting from rallying commodity prices. Not holding Grupo Mexico earlier in the period was negative, though we have since established a position. We view it as a cheaper proxy for its copper unit, Southern Copper (SCCO), a leading global producer with a low-cost asset base. However, mitigating losses here was our exposure to Brazilian miner Vale, in tandem with its parent, Bradespar. Their shares tracked iron ore prices' good run. The resumption of dividend payouts, which had been suspended since a deadly dam incident, provided an extra boost.

More positively, good stock selection in retailing supported returns. Not holding the likes of Americanas and Via Varejo was positive, as was the lack of exposure to Magazine Luiza for most of the year. We have initiated Magazine Luiza, however, as we like its leading positions in both traditional and online retail, alongside sound execution. In contrast, the position in Mercado Libre proved beneficial. The e-commerce giant continued to deliver exceptional

Latin American Equity Fund

Continued

results that showed robust growth momentum and consistent margin improvements.

Elsewhere, some of our core holdings in Mexico made meaningful contributions, thanks to the country's improving economic outlook. Lender Banorte was among the standouts on better earnings, with the recovery in the real economy driving asset quality improvements. The upbeat sentiment towards the market, along with rebounding results, also aided consumer goods group Femsa.

Apart from the introductions of Arco Platform, Grupo Mexico, Magazine Luiza, Mobly and Sequoia, all mentioned above, we initiated five more holdings. Four were from Brazil, where a rich pipeline of share floats enabled us to take positions in quality listings that enhanced the portfolio's exposure to niche areas. These included GetNinjas, an online platform that connects clients with freelancers. Another was energy company Raizen, which has best-in-class assets across sugar production, fuel distribution and renewable fuels. Separately, we initiated leading Brazilian renewable asset operator Omega Geracao, which has healthy cash flow that positions it well for expansion. We also bought Klabin, a vertically-integrated pulp and paper producer that was trading at attractive valuations. The other addition to the portfolio was Vesta, a high-quality and defensive Mexican property developer.

Against these, we divested Linx after its merger with payments company Stone, as well as lenova, given limited upside following a buyout offer. We also sold names where our conviction had waned, namely Aenza, BK Brasil, Embotelladora Andina, Hoteles City, Kimberly Clark Mexico and Odontoprev.

Outlook

We believe Latin America is well-placed to benefit from a conducive external backdrop for commodities, as well as the cyclical recovery of domestic economies. The region offers an attractive pool of companies to invest across sectors. Additionally, a broadening investment universe offers exposure to companies in growing areas, such as technology, healthcare, agriculture and renewable sectors, which are often underrepresented in major benchmarks.

That said, we are cognisant of near-term risks. Externally, the US Federal Reserve's accommodative stance has supported capital flows, but investors are watching signals on the tapering process. Weaker activity in China may pressure commodity prices, which have been a tailwind for the region. Domestic political developments, amid an intense electoral calendar, is high on investors' radars too. Covid-19 remains a worry, even with progress on vaccinations across the region. Inflation is another issue to watch, with central banks compelled to hike rates.

This is especially relevant for Brazil, where higher rates could further strain its fiscal balances, while low water reservoirs may heighten risks of power rations.

At the company level, we remain encouraged by our holdings' good results. Executives are highlighting opportunities for growth that are likely to materialise, irrespective of the broader economic situation. Moreover, many of our holdings have taken advantage of the pandemic to improve efficiency and digitalise, positioning them better for when economies fully reopen. We continue to favour such quality businesses, with their industry-leading positions, solid balance sheets, and experienced management giving us added confidence. Most also have compelling long-term growth drivers that are underpinned by secular themes, such as infrastructural development, renewable energy and growing consumption. Thus, we believe the portfolio will be resilient against present challenges, and remains well-placed to deliver sustained returns over the long run.

(www.msci.com)

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

The year under review captured a period of significant strength for risk assets globally as the actions of central banks combined with the rollout of Covid-19 vaccines around the globe to create a positive backdrop. Private equity and credit markets participated fully in the recovery, helped by a focus on sectors such as technology and healthcare that actually benefitted in many ways from the initial havoc wrought by the pandemic.

The managers of such assets also benefitted, as investors sought to allocate more to private markets to capture the premium returns they have delivered in recent years. Low interest rates globally continue to provide a helpful tailwind to this re-allocation from public to private, and particularly to yielding private market asset classes such as private credit and infrastructure.

Portfolio review

The strongest returns in the portfolio were delivered by alternative asset managers which delivered an aggregate 86.5% return. These gains were driven by a potent combination of earnings growth and rising valuations, with fundraising continuing apace whilst managers were also able to realise mature investments through highly competitive auctions or IPOs. In the US, additional tailwinds included the transition from the Trump to Biden administrations with, as yet, no major

adverse policy or tax changes directed at private market managers or their clients.

Private credit investments (mostly made through US-listed Business Development Companies, or "BDCs") delivered a 55.2% gain over the period. This reflected abating fears of negative credit events and the return of demand for the high and floating rate income that BDCs offer. Whilst a sharp re-rating in valuation accounted for the bulk of the gains, our preferred managers such as Oaktree, Hercules and Sixth Street were also able to deliver net asset value gains and stable or growing dividends.

Private equity investments delivered an aggregate 53.6% gain, with NAV appreciation the major driver. This, in turn, was driven by earnings growth from underlying portfolios, rising valuations on comparable public market companies and material value uplifts on realisations. Despite the excellent returns, discounts to NAV narrowed only marginally.

Diversifying investments delivered a +9.0% aggregate return, held back by the performance of precious metals royalty companies as the pervasive "risk on" mind set corresponded to reduced demand for safe haven assets, and particularly gold. This is somewhat surprising to us given that one of the major risks facing markets at present is unquestionably the prospect of higher inflation as a result of the stimulus efforts of central banks, recovering global growth, supply chain bottlenecks and strong post-lockdown demand for most goods and services.

Outlook

Whilst returns from the strategy have been extremely strong over the last couple of years, we think this is justified by fundamentals. The market turmoil prompted by the global pandemic served to highlight many of the benefits of investing in private markets. As a result, they have emerged from the crisis in rude health and with more investors than ever seeking to allocate growing pools of capital to them. The democratisation of private markets is accelerating, and the pandemic may yet be recognised as a watershed moment in this process.

The Fund's portfolio comprises alternative asset managers which expect to grow earnings by 15-20% in the coming years, private equity investments that target 15-20% annualised returns and private debt investments that deliver yields of 8-9%. All our holdings are listed and liquid and, we believe, trading at reasonable valuations. This is despite our strong preference to invest in only the highest quality assets available. With such a compelling growth profile and a growing opportunity set, we believe the Fund can continue to deliver on its objective in the coming years.

Market review

Global stock markets rose significantly over the past 12 months. Covid-19 was still the dominant factor at the beginning of the period, although stock markets had already begun their recovery from the lows of March 2020. Supportive monetary and fiscal policy was prevalent over the period.

Markets fell at the beginning of the period, reversing some recent gains. In November 2020, however, the relatively smooth US presidential election – coupled with news of three major Covid-19 vaccines – buoyed sentiment. This persisted through to the end of 2020 due to the launch of vaccination programmes, the approval of stimulus packages, and the reaching of a Brexit trade deal.

Momentum stalled again in January and February 2021 as global bond markets experienced a marked sell-off, spurred by worries of higher inflation. However, equity markets resumed their upward momentum, driven by economic optimism, vaccine rollouts, continued accommodative monetary policy and a strong corporate reporting season. After performing well during August, stock markets sold off in September, as concerns resurfaced over inflation and interest rate hikes.

Portfolio review

The Fund underperformed its benchmark over the 12 months.

At a stock level, an underweight position in the US oil major Exxon Mobil weighed on relative returns. The company benefitted from a rising oil price. Exxon Mobil scored poorly on our trend metrics. Conversely, the Fund benefitted from an underweight holding in the Chinese online commerce company Alibaba, as its share price dropped after a crackdown by the Chinese government on the company's market dominance. Alibaba had a negative score for value.

Lastly, in terms of our enhanced factors, our quality and trend factors underperformed. Meanwhile, the value and sentiment factors outperformed.

Outlook

Anecdotally, some of the supply bottlenecks emanating from manufacturing hubs in Asia are now easing. Some raw material cost pressures are also lessening. It is also noteworthy that China's manufacturing activity has experienced a small contraction. In the West, we await the effect on labour participation from the withdrawal of government support schemes. All of these factors suggest that supply chain pressure could start to moderate before year end. Overall, equity market performance may be tempered by gradual monetary policy normalisation and potentially higher taxation.

Market review

Global stock markets rose significantly over the past 12 months. Covid-19 was still the dominant factor at the beginning of the period, although stock markets had already begun their recovery from the lows of March 2020. Supportive monetary and fiscal policy was prevalent over the period.

Markets fell at the beginning of the period, reversing some recent gains. In November 2020, however, the relatively smooth US presidential election – coupled with news of three major Covid-19 vaccines – buoyed sentiment. This persisted through to the end of 2020 due to the launch of vaccination programmes, the approval of stimulus packages, and the reaching of a Brexit trade deal.

Momentum stalled again in January and February 2021 as global bond markets experienced a marked sell-off, spurred by worries of higher inflation. However, equity markets resumed their upward momentum, driven by economic optimism, vaccine rollouts, continued accommodative monetary policy and a strong corporate reporting season. After performing well during August, stock markets sold off in September, as concerns resurfaced over inflation and interest rate hikes.

Portfolio review

At a stock level, an active position in the Malaysian latex glove manufacturer Top Glove weighed on relative returns. The share price weakened on falling demand for its personal protective equipment, driven by the success of the Covid-19 vaccine rollout. Top Glove scores well for value. Conversely, the Fund benefitted from an underweight holding in the Chinese online commerce company Alibaba, as its share price dropped after a crackdown by the Chinese government on the company's market dominance. Alibaba had a negative score for value.

Lastly, in terms of our enhanced factors, our quality and trend factors underperformed. Meanwhile, the value and sentiment factors outperformed.

Outlook

The Fund closed on 18 May 2021.

North American Smaller Companies Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of North American Smaller Companies – A Accumulation Shares increased by 47.48% compared to an increase of 49.37% in the benchmark, the Russell 2000 TR Index (1 day lag).

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Benchmark return: Source: Lipper, Basis: close of business return, income reinvested, gross of expenses, USD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Major US equity market indices moved sharply higher amid periods of volatility over the 12-month period ended 30 September 2021, buoyed largely by investors' ongoing optimism regarding the distribution of Covid-19 vaccines and generally positive economic reports. Following strong performance for much of the third quarter, there was a sharp downturn in the US equity markets in September 2021, attributable to investors' concerns surrounding inflation, supply-chain challenges, and peak earnings growth. The rising number of Covid-19 cases drove increasing risk-off market sentiment and investors' rotation out of equities. Shares of US small-cap companies, as represented by the Russell 2000 Index, advanced 47.68% for the reporting period, significantly outperforming the 30.01% return of their large-cap counterparts, as measured by the S&P 500 Index. All 11 sectors within the Russell 2000 Index garnered solid double-digit gains during the reporting period, led by energy – which climbed more than 150% – communication services and materials. The utilities, healthcare and consumer staples sectors were the most notable market laggards despite posting robust gains for the period.

The US Federal Reserve (Fed) maintained its benchmark interest rate in a range of 0.0–0.25% over the 12-month reporting period. However, the Federal Open Market Committee (FOMC) noted in its statement following its September 2021 meeting that "the path of the economy continues to depend on the course of the coronavirus. Progress on vaccinations will likely continue to reduce the effects of the public health crisis on the economy, but risks to the economic outlook remain." The FOMC also indicated that a reduction in its monthly purchases of US Treasury and agency mortgage-backed securities "may soon be warranted."

In economic news, US GDP grew at an annualised rate of 6.7% in the second quarter of 2021 (the most recent available data) – accelerating 0.4 percentage point from the first quarter of the year. The economic upturn in the

second quarter was attributable mainly to increases in consumer spending, nonresidential fixed investment, exports, and state and local government spending. According to the Department of Labor, US payrolls expanded by a total of 5.5 million over the 12-month period ended 30 September 2021, and the unemployment rate fell 3.0 percentage points to 4.8% – the lowest level since the onset of the Covid-19 pandemic in March 2020. Nonetheless, the employment totals remain about 4.9 million below the pre-pandemic peak level in February 2020. Inflation appears to be heating up amid supply-chain disruptions and upward pressure on wages. The US government reported that the Consumer Price Index (CPI) rose 5.4% year over year in September 2021. Energy costs skyrocketed nearly 25% over the 12-month period ended August 31, fueled mainly by a 42% increase in gasoline prices. The index for all items less food and energy was up 4.0% over the previous year.

Portfolio review

The Fund modestly underperformed its benchmark, the Russell 2000 Index, for the 12-month period ended 30 September 2021. Stock selection in the financials sector and overall positioning in the consumer discretionary sector weighed on Fund performance. The largest detractor from performance among individual holdings was Mercury Systems. Shares of the manufacturer of electronic components for aerospace and defense applications moved lower over the review period due to a mix of program delays and coronavirus-related challenges which have weighed on its organic revenue growth and profitability. Customers have extended timelines for delivery on certain platforms for several reasons, most significantly pandemic-related productivity.

Overall positioning in the healthcare sector and stock selection in information technology had a positive impact on Fund performance for the review period. The most notable individual stock contributor to performance was InMode Ltd. The medical device maker, which specializes in products targeted at the aesthetics market, has benefited from secular tailwinds behind its market, as well as its platform of proprietary and IP-protected technologies. Recent results have come in well ahead of the market's expectations. IT services provider Perficient Inc. delivered strong results over the reporting period highlighted by accelerating revenue growth and expanding operating margins. The company has benefited from its clients' increasing digital transformation activities, while the company's decision to push delivery to more offshore locations has led to higher margins. Kulicke & Soffa Industries, a manufacturer of semiconductor assembly solutions, benefited over the reporting period from a favourable environment for semiconductor manufacturers and broad-based demand across a variety of industries.

Outlook

Increasing uncertainty, coupled with increased expectations, drove choppy market conditions in the third quarter. Driving the volatility in the quarter were the persistent worries around the Covid-19 Delta variant and inflation, and a worsening picture of supply chains – all prompting a deceleration in the upward earnings trends we had seen for the year to date. Additionally, a potential property market crisis emerged in China (i.e., Evergrande), for which the global implications are not certain. The confluence of these issues within an expensive valuation context has led to a jittery market that is grappling with how to properly discount these risks into equity markets.

Consumer sentiment has come further off its highs, with the Conference Board Consumer Confidence Index® moving lower for the third consecutive month in September, although it remains relatively healthy when compared to pre-pandemic levels. This appears to be driven by the impact of the Delta variant in more severely affected states, on which the trajectory appears to be improving by late quarter. That is, for the first time in three months since the beginning of the Delta-induced surge, Covid-related hospitalizations and daily cases are declining in the aggregate nationwide. We feel that consumer financial health remains robust following a prolonged period of household debt paydown and increased savings through the pandemic. While short-term confidence appears to be dented by the recent wave of Delta variant cases, we believe that the current financial state of consumer balance sheets implies further spending and investment.

On the other side of the equation, robust demand was hampered in September by supply issues. Up until that time, corporate managements generally emphasised that increases in some input costs were being more than outweighed by strong operational gearing to volume growth as sales recover. In the past few weeks, however, we have seen that in several sectors (notably industrials, materials, and consumer discretionary), supply-chain tightness has become extreme enough to prevent manufacturers and retailers from fulfilling customer orders. This has resulted in negative earnings preannouncements, which have halted the general trend of earnings upgrades seen thus far in 2021.

Nevertheless, we believe that sales growth should recover following the current transitory period. Beyond this phase – which has brought investor focus to the very near term, given the rapid fluctuations in supply chains – we anticipate that the market will shift its focus towards the sustainability of growth as the cycle normalises. Within this

context, we continue to strive to create value for the Fund's shareholders by investing with conviction in companies that in our view have strong, sustainable business models and long runways for growth.

Market review

Russian equities rose sharply in euro terms over the 12 months to September 2021, much faster than the broader global emerging markets asset class.

Energy stocks advanced to record levels as oil and gas prices rose to multi-year highs due to low near-term global supplies, the easing of travel restrictions and post-pandemic economic activity. Materials stocks rose along with industrial metal prices on the back of unprecedented monetary easing and fiscal stimulus globally. Also, financial stocks recovered, having been pressured earlier in the pandemic by concerns that the heightened credit risk amid a low-interest rate environment would hurt lenders' profits. These developments were highly favourable for stocks that made up the bulk of the Russian benchmark index; namely, energy and materials, as well as banks.

In economic news, Russia's June-quarter GDP grew double digits year-on-year and recovered to pre-pandemic levels. This was despite aggressive monetary tightening to ease inflationary pressures, which remained challenging. The central bank began to raise interest rates in the second half of the review period to restrain these pressures.

In other policy matters, the Kremlin approved a programme that will increase the country's liquefied natural gas (LNG) output by three to fivefold in 15 years. Moscow launched a new initiative to promote electric vehicle sales and the development of related infrastructure. It is also raising mineral extraction tax on metals producers next year.

Select Emerging Markets Bond Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of Select Emerging Markets Bond – A Accumulation Shares increased by 4.68% compared to an increase of 4.36% in the benchmark, the JP Morgan EMBI Global Diversified TR Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Benchmark return: Source: Lipper, Basis: close of business return, income reinvested, gross of expenses, USD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Emerging market (EM) debt returns were positive over the period. Although the market saw increased volatility at the beginning, momentum quickly turned positive following the relatively smooth US elections. Following this, there were multiple successful Covid-19 vaccine trials and the passing of a new US\$900 billion stimulus bill. This supported EMs, even during a second wave of Covid-19 infections that caused many countries to reinstate lockdown measures. This strong momentum fizzled out at the beginning of 2021 amid increased economic uncertainty and vaccine rollout challenges. However, risk assets began to climb again in February, driven by higher commodity prices, stronger inflation prospects, positive vaccine sentiment and the passing of the US\$1.9 trillion Covid-19 relief package.

Despite the spread of the more transmissible Delta variant of Covid-19, risk sentiment continued to improve in the second half of the period, as strong vaccination progress – particularly in the developed world – led to economic reopenings and increased optimism for a global economic recovery. In the final three months of the period, US Treasury yields were volatile due to reduced US Treasury issuance and tapering comments from US Federal Reserve (Fed) Chair Jerome Powell. In September, the Fed announced it would begin to slow the pace of its asset purchases – now projected to come to an end in 2022. Oil prices were also volatile, with the Brent crude oil price ending the period at US\$77.81 per barrel. Vaccine optimism, widespread supply disruption and falling inventories combined to support the rising oil price.

Portfolio review

In terms of performance, the Fund's country allocation, selection effects, sector allocation and credit allocation were positive for performance, while currency exposure detracted. The main contributors to returns were credit allocation, currency exposure and an underweight position in Colombia and selection effects and an overweight position in Ukraine. Other contributors included underweight positions in Chile, Panama and Peru, a lack of exposure to Malaysia and the Philippines, overweight positions in Angola, Ivory Coast and Iraq and off-benchmark positions in Venezuela and Benin. An overweight position in Mexico also contributed, as did selection effects and credit allocation, although our sector allocation in Mexico offset this a little. Sector allocation in Uruguay, Turkey, Egypt and Ivory Coast also helped performance.

Conversely, some of the biggest detractors to performance were the Fund's overweight holdings in Argentina and Ecuador and underweight positions in Oman and Turkey. Our cash allocation to the euro and exposure to the Turkish lira also weighed on performance. Elsewhere, an overweight allocation to Brazil, sector allocation and exposure to the Brazilian real hurt returns.

With regards to activity, we increased our duration in the Dominican Republic and initiated exposure to Eurobonds in Iraq and Belarus. We initiated a 1% exposure to Turkish hard-currency bonds and participated in a new issue from Uzbekistan. We also participated in new issues from Benin (Eurobond), the Dominican Republic and Oman and added to our position in sukuk bonds from the Emirate of Sharjah. In the second half of the period, we added positions in Jordan and Angola and increased exposure to Armenia, Egypt and Qatar. Elsewhere, we added a long-dated Romanian position and added to Qatar and Saudi Arabia based on their positive macroeconomic outlooks. On the sell side, we decreased exposure to Tunisia and reduced positions in Russia, Armenia, the Bahamas and Ecuador, among others.

In local currency, we topped up in Brazilian bonds and added exposure to India, South Africa and Brazil. We later reduced our exposure to the South African rand and sold positions in Uruguay and Mexico to aid outflows

In the corporate space, we added positions in BRF and extended duration in BBVA Bancomer. We also purchased new issues from Petroleos del Peru and Chinese property developers Shimao and Sunac. We shortened duration in Dubai-based chemical manufacturer MEGlobal, sold down positions in Abu Dhabi National Energy Company and reduced exposure to Colombian petroleum company Ecopetrol.

Select Emerging Markets Bond Fund

Continued

Outlook

EM assets continue to benefit from the global economic recovery and accommodative fiscal policies, especially since the risk of prolonged lockdowns has diminished as the global vaccine rollout accelerates. Financing needs should remain contained for many EM economies, where better-than-expected growth in the first half of the year led to robust revenue growth. Meanwhile, the recent International Monetary Fund special drawing rights allocation has also boosted reserves. While inflation has been high across the globe, EM central banks have responded with orthodox monetary policy – by raising interest rates – and seem to be ahead of the curve compared with developed market policymakers. The risks to our outlook remain a hawkish Fed leading to rising US Treasury yields and sustained US dollar strength. A more pronounced slowdown in China would also weigh on commodity prices and sour sentiment. Lastly, vaccine inefficacy against new Covid-19 variants, which delays economic reopenings and engenders social unrest, is also a risk to our outlook.

Select Emerging Markets Investment Grade Bond Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of Select Emerging Markets Investment Grade Bond – A Accumulation Shares increased by 1.16% compared to a decrease of 0.08% in the benchmark, the JP Morgan EMBI Global Diversified Credit Investment Grade TR Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Benchmark return: Source: JP Morgan, Basis: close of business return, income reinvested, gross of expenses, USD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Emerging market (EM) debt returns were positive over the period. Although the market saw increased volatility at the beginning, momentum quickly turned positive following the relatively smooth US elections. Following this, there were multiple successful Covid-19 vaccine trials and the passing of a new US\$900 billion stimulus bill. This supported EMs, even during a second wave of Covid-19 infections that caused many countries to reinstate lockdown measures. This strong momentum fizzled out at the beginning of 2021 amid increased economic uncertainty and vaccine rollout challenges. However, risk assets began to climb again in February, driven by higher commodity prices, stronger inflation prospects, positive vaccine sentiment and the passing of the US\$1.9 trillion Covid-19 relief package.

Despite the spread of the more transmissible Delta variant of Covid-19, risk sentiment continued to improve in the second half of the period, as strong vaccination progress – particularly in the developed world – led to economic reopenings and increased optimism for a global economic recovery. In the final three months of the period, US Treasury yields were volatile due to reduced US Treasury issuance and tapering comments from US Federal Reserve (Fed) Chair Jerome Powell. In September, the Fed announced it would begin to slow the pace of its asset purchases – now projected to come to an end in 2022. Oil prices were also volatile, with the Brent crude oil price ending the period at US\$77.81 per barrel. Vaccine optimism, widespread supply disruption and falling inventories combined to support the rising oil price.

Portfolio review

Country allocation, security selection, credit allocation and currency allocation were all positive for performance, while sector allocation was marginally negative.

Latin America was the best-performing region, with positive contributions from our overweight position in Mexico, underweight positions in Panama and Peru and off-benchmark position in the Bahamas. Selection effects in Mexico and credit allocation in Colombia and Mexico also helped. Elsewhere, an overweight holding in India, off-benchmark position in Morocco, security selection in Indonesia and Kazakhstan and sector allocation in Hungary and Uruguay all added to returns. On the other side, the largest detractor to returns was our allocations in China, with our underweight position, security selection, credit allocation and exposure to the yuan all negative. Other detractors included sector allocation in Romania and exposure to the Mexican peso.

In terms of portfolio activity, in the first half of the period, we participated in new issues from the Philippines, Morocco, Romania and KMG, Kazakhstan's state-owned oil company. We also reduced holdings in Croatia, Panama, Bermuda, Morocco and Saudi Arabia. In addition, we reduced our Abu Dhabi sovereign bond holdings. In the corporate space, we added exposure via Union Bank of Philippines, Country Garden and Galaxy Pipeline. We reduced our holdings in two Chinese names, CNAC and Sinopec. In local-currency debt, we initiated a position in Uruguayan inflation-linked bonds and reduced exposure to Indonesian and Indian local rates.

In 2021, the portfolio participated in new issues from Indonesia, Peru, Saudi Arabia and Romania. We also added Petroleos del Peru, a state-owned Peruvian company. On the other side, we cut riskier positions in the Bahamas and Trinidad and Tobago, and reduced exposure to Colombia, due to deteriorating fundamentals. We also reduced the Fund's Kazakhstan duration via KTZ, the state-owned railway company. In the corporate space, we participated in new issues from Hyundai, West African Development Bank and Gazprom. In local currency, we added Mexican local exposure, sold out of Colombian rates and implemented a short Polish zloty, long Czech koruna currency position.

In the latter half of the period, we took part in two attractively priced new issues, one sovereign issue from Hungary and a corporate issue from Chilean oil and gas company Empresa Nacional. Additionally, we switched from Romanian 2032 bonds to 2050 bonds and added to China on a relative-value basis. We carried out further switches over this period, exchanging sovereign positions in Colombia with Chile and petroleum firm Qatar Energy and switching from Kazakhstan-based oil and gas company Tengizchevroil's 2026 bonds to 2030 bonds on a relative-value basis. We reduced our position in Chinese real estate company Country Garden to decrease risk and sold positions in Russia and Mexico based on poor valuations. Furthermore, we reduced our positions in

Select Emerging Markets Investment Grade Bond Fund

Continued

Morocco and Colombian oil and gas firm Ecopetrol on a macroeconomic basis and sold our position in Bangladeshi financial services firm RAK Capital to fund positions in Chile.

Outlook

EM assets continue to benefit from the global economic recovery and accommodative fiscal policies, especially since the risk of prolonged lockdowns has diminished as the global vaccine rollout accelerates. Financing needs should remain contained for many EM economies, where better-than-expected growth in the first half of the year led to robust revenue growth. Meanwhile, the recent International Monetary Fund special drawing rights allocation has also boosted reserves. While inflation has been high across the globe, EM central banks have responded with orthodox monetary policy – by raising interest rates – and seem to be ahead of the curve compared with developed market policymakers.

The risks to our outlook remain a hawkish Fed leading to rising US Treasury yields and sustained US dollar strength. A more pronounced slowdown in China would also weigh on commodity prices and sour sentiment. Lastly, vaccine inefficacy against new Covid-19 variants, which delays economic reopenings and engenders social unrest, is also a risk to our outlook.

Select Euro High Yield Bond Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of Select Euro High Yield Bond – A Accumulation Shares increased by 9.60% compared to an increase of 9.35% in the benchmark, the ICE Bank of America Euro High Yield Constrained TR Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, EUR.

Benchmark return: Source: Lipper, Basis: close of business return, income reinvested, gross of expenses, EUR.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

The European high-yield (HY) market rose over the 12 months to the end of September 2021. Early in the period, the announcement of effective vaccines boosted the HY market. Momentum gathered for a vaccine and stimulus-driven economic recovery, amid hopes that European economies would begin to revert to some semblance of normality. This continued into the latter part of the period, with the reopening of economies amid continued monetary and fiscal stimulus supporting sentiment. However, September 2021 was the first month of negative performance for European HY since the same month last year, with the market contending with the difficult combination of higher-than-expected inflation and weaker-than-expected growth. Supply chain issues and labour shortages caused concern, while energy price increases, which show little sign of stabilising, added further pressure.

Corporate fundamentals remain intact as we continue to benefit from economic tailwinds, while the ability to refinance and extend debt maturity profiles keeps default rates suppressed. Central bank policy remains key when considering the financial conditions that exist today. But with central bank rhetoric becoming increasingly hawkish, and alongside other macroeconomic risks, market dispersion is picking up accordingly.

The exceptional levels of primary issuance have accelerated, with record quarterly new issuance of €48.4 billion in the second quarter of 2021. The €20.9 billion brought to market in June also set a monthly record. JP Morgan subsequently upgraded its full-year forecast from €120 billion to €140 billion. This would represent a large increase of last year's record amount of €103.3 billion. As at the end of the period, gross issuance was €119 billion.

Portfolio review

In terms of performance, from a sector perspective, our overweights to leisure and retail contributed to performance, while our stock selection in the banking and capital goods sectors also helped. Meanwhile, underweight exposure and security selection within telecoms also contributed. Conversely, our cash position was a drag on performance, as was our overweight to the media and health care sectors, and underweights in energy, automotives and transportation. Meanwhile, security selection and underweight positioning in basic industry, and security selection in media detracted from returns.

At a stock-specific level, banking positions were some of the biggest contributors to performance, with Rabobank, Virgin Money and Banco Santander the most notable. Meanwhile, our off-benchmark holding in UK oil company EnQuest's 2023 also outperformed, as it gained from the continuing rise in the oil price. Matalan (UK retail) was positive, benefiting from the UK reopening. Within capital goods, our position in plastics packaging business Kleockner Pentaplast performed well. Kloeckner's bonds saw a strong recovery due to significantly improved profitability as a result of lower input costs and operating expenses.

On the other hand, our shorter-dated positions in International Game Technology, Consus (German real estate), Schustermann & Borenstein (German retail), OCI (industrial chemicals and fertilisers) and Techem (German energy) struggled to keep up with the strength of the broader market. Monte Dei Paschi (banking) also underperformed. Its Tier 2 bonds fell sharply after a news article in Italy suggested that UniCredit had gone cold on the prospect of buying the bank. Monte's bonds recovered somewhat on reports that the Italian government was still pushing for a deal. We are holding our position on the basis we think a bail-in (debt write-down) is unlikely and merger and acquisition activity is not out of the question. This would deliver substantial upside.

Outlook

Although we expected markets to remain range bound into the end of the year, the feeling among the team has become increasingly cautious in recent weeks as reflected through recent portfolio activity. We do not feel that one unforeseen event is going to cause a shock to markets, or that any one known risk, such as a 'Minsky moment' due to contagion from the demise of Evergrande, is going to lead to a spike in volatility. However, several risks are building simultaneously and are probably not fully reflected in valuations. The combination of higher-than-expected inflation and weaker-than-expected economic data is an unfavourable mix; when combined with a more hawkish tone from central bankers around the world, this

Select Euro High Yield Bond Fund

Continued

should give markets pause for thought. The importance of the property sector to China is well known and yet the deteriorating fundamentals have been confined to that sector and region. Finally, as winter approaches, we cannot discount the possibility of Covid-19-related economic disruption. We are not by any means predicting a dramatic economic downturn or a violent shock to global financial markets, but we do feel that risk-asset prices have been remarkably resilient in the face of global supply chain issues, higher discount rates and instability in the most important single sector in China. We are not making wholesale changes to the Fund as we think we are broadly positioned correctly for the environment (underweight BBs and areas of the market most sensitive to higher yields and overweight subordinated lower-rated defensive credits and sectors). Moreover, we think it makes sense to build up a slightly larger-than-average cash buffer and reduce higher-beta exposures (subordinated financials for example) and are being extremely selective when looking at new issues. We expect valuations to cheapen slightly from here and will look to take advantage of opportunities as they present themselves.

UK Equity Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of UK Equity – A Accumulation Shares increased by 18.38% compared with an increase of 27.89% in the benchmark, the FTSE All-Share TR Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, GBP.

Benchmark return: Source: Lipper, Basis: close of business return, income reinvested, gross of expenses, GBP.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

The UK stock market ended the period notably higher. During a period of considerable political upheaval, investors grappled with Brexit-related uncertainty and the economic fallout from the coronavirus pandemic. Smaller domestic companies outperformed larger companies on the FTSE 100 Index.

Stocks dipped at the beginning of the period amid wider economic uncertainty, a second Covid-19 wave and continued fears about Brexit. However, US presidential election news and major vaccine announcements in November 2020 spurred a strong rally in equities. The rollout of vaccination programmes, coupled with the UK and the European Union agreeing on a Brexit trade deal in December 2020, supported UK equities. This positive momentum took a brief pause in January 2021 before picking up again in February and thereafter. Supportive government policy, easing lockdown restrictions, positive earnings results and an admirable vaccine rollout all drove markets upwards.

Despite concerns about the spread of the Delta variant of Covid-19, the Government lifted lockdown restrictions at the end of July. There has been a welcome recovery in economic activity, but this put a strain on supply chains. Most recently, the disruption caused by the ongoing fuel shortage has dented sentiment.

Further, Chancellor Rishi Sunak pledged an additional £65 billion in emergency support measures for workers and businesses. In economic news, although first-quarter 2021 numbers showed a 1.6% quarterly decline in gross domestic product due to nationwide lockdowns, economic growth rebounded 5.5% in the second quarter. The Bank of England (BoE) kept interest rates at 0.1% at its most recent meeting in September and maintained targets for bond purchases.

Portfolio review

At the stock level, detractors included ASOS, Alphawave and Moonpig. Shares of ASOS fell over the period, after the company warned about the impact of supply-chain issues and reduced its full-year earnings guidance. However, our analyst's view is that growth expectations are now achievable and the shares are attractively valued. Shares of chipmaker Alphawave weighed on returns after a short selling thesis was published around the company's relationships with some of its key customers. In our view, concerns are overdone – the relationships were fully disclosed at the company's initial public offering, and the sector is one with a small and tightly knit community, which makes these kinds of relationships understandable. Moonpig also performed poorly, driven by growth concerns and the potential impact of restrictions on the supply chain and distribution. We believe these concerns are overdone, as the company continues to deliver underlying growth. We topped up our holding on recent weakness.

Conversely, holdings that mitigated the loss included Watches of Switzerland, not holding Reckitt Benckiser and WH Smith. Watches of Switzerland was the top individual contributor to returns. The company has experienced a significant boost in demand spurred by higher disposable incomes and growth in online sales. Not holding consumer goods company Reckitt Benckiser added value as the shares fell sharply in July 2021 following a set of quarterly results that disappointed investors. Lastly, WH Smith added value as it benefitted from high streets reopening following lockdown.

Outlook

The Fund aims to deliver outperformance relative to its benchmark over a medium-term horizon based on stock-specific investment cases while minimising risk relative to the benchmark. The manager aims to take advantage of our large and well-resourced UK active equities team to generate stock-specific insight. Over time, the team process has resulted in consistent outperformance at a single-stock level. The Fund will hold the highest conviction ideas from analysts in each sector, while managing sector weights and risk exposure to ensure we are not taking factor bets unless we have clear insight on those factors. The strategy should result in a Fund that is relatively style agnostic and can deliver outperformance through the cycle while remaining risk aware. The manager will make use of risk tools to monitor and control the risk profile of the Fund. They will also make use of the environmental, social and governance resources to ensure factors such as carbon emissions are tracked and used as an input for Fund construction.

US Dollar Credit Bond Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of US Dollar Credit Bond – A Accumulation shares increased by 1.29% compared to an increase of 1.45% in the benchmark, the Bloomberg Barclays U.S. Credit TR Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Benchmark return: Source: Lipper, Basis: close of business return, income reinvested, gross of expenses, USD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

During the 12-month period ended 30 September 2021, the US fixed income market, as measured by the Bloomberg Barclays U.S. Credit Index, returned 1.45%. The total return was driven by carry and spread tightening, which more than offset rising US Treasury yields. Spreads tightened by 48 bps during the 12-month period, while 10-year Treasuries saw yields rise by 80 bps. In recent months, volatility began to increase as one of “the world’s most indebted developers,” China Evergrande, faced default during the month of September. The firm has more than 1,300 projects in more than 280 cities with over US\$300 billion of liabilities. Rating agencies continued to cut the firm’s ratings further into high-yield territory during the month and its bonds fell towards \$0.20 on the dollar. As of the end of September, the company had not paid interest on a note due 2024, but it has a 30-day grace period to cure the default. China has taken steps to limit the systematic fallout, including the local Shenyang government buying a 20% stake in Shengjing Bank from Evergrande, but risks to other developers in China remain. US markets took the news in stride as the US maintains limited direct or indirect exposure to Chinese property markets. However, there were spillover effects, with iron ore trading down to around US\$100 per metric ton after reaching more than US\$230 per metric ton in May 2021. Markets with direct ties to Chinese property have already felt significant headwinds. The Brent Crude oil price also remained topical as it breached US\$80, and is now at its highest level since 2014, following the OPEC+ decision to maintain gradual supply hikes instead of stepping in with more aggressive supply additions. This is notable; as the heating season in the Northern Hemisphere nears, there is growing evidence of rising costs and potential supply shocks related to low natural gas storage levels. US core PCE inflation, which excludes fuel and food, increased to 3.6% year over year during August, remaining elevated and above the Federal Reserve’s (Fed) target levels. Supply-chain issues, coupled with the rising energy prices noted above, will likely continue to pressure pricing higher in the near term. The Fed held another meeting in September,

and considering the persistent inflation, pivoted to a slightly more hawkish stance, noting that it is on track to announce a taper at its upcoming meeting in November. Notably committee members are now evenly split between the first hike occurring in late 2022 or early 2023.

Fundamentally, we are seeing more companies miss or lower their earnings forecasts due to some of the previously cited issues. In fact, in the last two weeks of September, FedEx, Bed Bath & Beyond, and Sherwin-Williams either missed earnings or cut guidance due to labour availability issues or supply-chain disruptions. This all paints a murkier economic and fundamental backdrop heading into year-end. However, the fixed income market remains resilient. Credit spreads, as measured by the Bloomberg Barclays U.S. Credit Index, tightened by 48 bps during the 12-month reporting period, resulting in the index trading at an option-adjusted spread (OAS) of 80 bps versus 128 bps at September 30, 2020. However, US Treasury yields shifted higher, with the curve-bear steepening. Yields on five-, seven- and ten-year Treasuries backed up by 69, 81 and 80 bps during the 12-month period off-ended 30 September. Thirty-year Treasuries widened by 59 bps. The long end of the corporate credit curve outperformed during the reporting period. Spreads tightened across the credit-quality spectrum during the 12-month period, with A-rated and BBB-rated paper tightening by 37 and 69 bps, respectively.

Portfolio review

Fund performance was bolstered by strength in the technology, consumer non-cyclical and municipal sectors, while capital goods, energy and consumer cyclicals were the primary detractors. The Fund’s holdings in technology provided the strongest performance, benefiting from both the sector overweight as well security selection as credit curves flattened, with the long end outperforming over the quarter, leading to outperformance in names such as Broadcom, Intel, and Oracle, where we have skewed holdings to the 30-year bucket. In the non-cyclical sector, we saw strong performance across pharmaceutical names as we navigate through the recovery of the global pandemic. Names where we held an overweight to the long end of the curve provided the strongest benefit, such as Abbvie, Merck and Pfizer. In the taxable municipal sector, the Fund’s overweight largely drove the excess returns as the asset class experienced a broad-based rally on the back of US Senate majority going to the Democrats following the Georgia run-off elections in early January 2021. Metropolitan Authority of New York City (MTA) 2049s were the Fund’s top performers in the sector, as spreads tightened considerably during the year on the back of receiving the necessary funding for its 2021 fiscal year budgets as part of the stimulus bill passed in December 2020. In the capital goods sector, underperformance

US Dollar Credit Bond Fund

Continued

resulted from both the sector underweight and security selection, led by stable BBB rated issuers that outperformed in the first leg of the recovery, such as Northrop Grumman and Republic Services. The Fund's underperformance in the consumer cyclical sector was driven by underweight to the long end of the curve. The primary detractors from Fund performance in the sector included Volkswagen, DR Horton and Hyundai Motors, where our holdings were inside of seven years.

Outlook

We maintain a generally defensive stance in the Fund's portfolio, as spreads remain near all-time tight levels. We are seeing signs of peaking growth in the US, albeit still at an above-trend pace, which we expect to continue into 2022. While the Fed had stuck to the belief that inflation would be transitory, the most recent update from Fed Chair Jerome Powell came across a bit more hawkish, as there were indications of concern that increased inflation could remain longer than anticipated. This came along with rhetoric for a likelihood of Fed tapering through reduced asset purchases as early as the fourth quarter 2021, with interest-rate hikes still a year out. While we acknowledge that credit spreads tend to perform well in a mid-cycle environment, we still believe that the upside remains limited, leaving us reasonably cautious on owning too much risk at this point in time as we feel the market is now more open to corrections as the Fed begins to pull back. We think that the technical backdrop remains favourable, with continued positive flows into the asset class from domestic retail and institutional investors. We also continue to expect strong interest from European and Asian investors in US investment-grade credit as the currency basis and yield pickup remain very favourable.

Issuance for the year to date has been high, with \$156 billion issued in September and \$1.1 trillion for the year to date, but we feel it is worth noting that net supply remains in line with the four-year average as maturities also remain high, along with increased amounts of debt tendered over the course of the year. Our issuance expectations are in the context of \$200 billion for the fourth quarter of 2021, taking us to \$1.3 trillion for the 2021 calendar year. Fundamentally, we look forward to the release of third-quarter corporate earnings, where we expect the results to lag the strength seen in the second quarter. We expect to see more results in line with expectations, with a few more misses with supply and labour costs making more of an impact than in recent quarters. We continue to allow our bottom-up credit research driven process to find opportunities and drive the construction of the Fund's overall portfolio.

This process has resulted in the Fund's overweight allocations to TMT, consumer cyclicals and taxable municipals, versus underweights to sovereigns, supranational and transportation.

US Dollar Short Term Bond Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of US Dollar Short Term Bond Fund – A Accumulation shares decreased by 0.26% compared to an increase of 0.03% in the benchmark, the FTSE United States WGBI 1–3 Years TR Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Benchmark return: Source: Lipper, Basis: close of business return, income reinvested, gross of expenses, USD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

The Covid-19 pandemic, economic factors and politics dominated global throughout the review period. Worldwide vaccine rollouts raised hopes of a return to normality, while monetary and fiscal stimulus supported markets. These offset fears of vaccine-resistant Covid-19 variants, but fuelled new concerns around rising inflation, which weighed heavily on global bond markets.

The fixed-income market performed well in the final three months of 2020 following the outcome of the US elections. Shorter-dated corporate-bond spreads tightened. Congress eventually passed into law a second fiscal stimulus package at year-end. Despite the extreme volatility exhibited throughout the year, one- to three-year corporate bonds outperformed Treasuries in 2020. The first quarter of 2021 was also marked by interest-rate volatility. Further generous fiscal policy included the passing of the new US\$1.9 trillion Covid-19 relief bill, and the subsequent announcement of more support. Treasury yields rose (prices fell) abruptly in response to market expectations of a strong economic recovery. The resulting concerns that the economy might overheat led to a surge in inflation, which caused a sharp repricing of intermediate and longer-dated interest rates. The second quarter of 2021 brought more widespread reopening across developed markets including the US where President Biden's vaccination roll-out programme continued at pace. With growth rebounding, frictions from reopening (supply disturbances, strong demand and base effects) resulted in a move higher in inflation. At the June Federal Open Market Committee (FOMC) meeting the US Federal Reserve took a hawkish turn, signalling the possibility of tapering quantitative easing (QE) later in the year.

Economic data moderated somewhat in the final three months of the review period as the initial growth rebound peaked. New infection rates grew to around 175,000 week-on-week as the Covid Delta variant spread across

the US. Fed member comments, however, were consistent in suggesting the economy could weather the latest surge in cases and maintain the path to recovery. This appeared vindicated at the close of the quarter as data releases indicated slower, but still strong, growth momentum. At its September FOMC meeting, Chair Powell's comments suggested QE tapering will conclude around mid-2022 in line with market expectations. From a policy passage perspective, the combination of infrastructure spending Bills and the fast-approaching need to adjust US debt ceiling created multiple impasses that are set to run well into the last three months of 2021.

Portfolio review

The investment strategy performed well over the review period. Shorter-dated interest rates stayed within a contained range, tied closely to the federal fund rate. Two- and three-year Treasury yields rose, and the curve steepened. The Fund's yield curve positioning, which was moved to reduce exposure in four- to five-year maturity bonds earlier in the year, detracted mildly from performance in the first quarter of 2021. However, the shift from neutral to underweight duration relative to benchmark was positive throughout the remainder of the year. An increased allocation to floating rate debt built since the beginning of the year also mitigated interest rate risk from the rise in Treasury yields. The Fund held an overweight position to higher quality corporate bonds and as the US economy showed continued strength in recovery, corporate fundamentals and spread tightening drove performance.

Outlook

We believe the lingering impact of the Delta variant of Covid-19 has pushed a more robust recovery into the fourth quarter of 2021. However, having passed the peak rebound it is likely the pace of recovery for the US will generally be on a moderating trend. This downshift in activity was always to be expected, but the combination of the Delta-driven fourth wave, a greater-than-expected slowing of the Chinese economy, sticky underlying inflation, and the slightly earlier commencement of Fed normalisation, leave the path ahead more challenging. We await the full details of the Fed's tapering programme to assess the impact, if any, of the withdrawal of liquidity on front end yields.

World Credit Bond Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of World Credit Bond – A Accumulation Shares increased by 1.59% compared to a increase of 1.46% in the benchmark, the Bloomberg Global Aggregate Credit (Hedged USD 100%) TR Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Benchmark return: Source: Lipper, Basis: close of business return, income reinvested, gross of expenses, USD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Corporate bond returns were positive over the period. Both investment-grade and high-yield issues showed positive performance, although the latter did better.

Fears over the impact of Covid-19 on the credit market, particularly high-yield bonds, had dissipated somewhat by the beginning of the period. Economies began emerging from the first lockdown and the major central banks were purchasing corporate bonds through their stimulus programmes.

But bond prices fell slightly in October 2020 as investors sold out of riskier debt, concerned about the potential for rising defaults amid uncertainty from rising coronavirus cases and the US election. November saw the upward trend resume on positive news flow stemming from vaccine breakthroughs and a likely Biden presidency. This extended into the end of 2020, driven by vaccine optimism, the Brexit trade deal agreement and US stimulus package.

Rising Treasury yields at the beginning of 2021 affected markets. However, corporate bonds, particularly high-yield debt, managed to weather the storm reasonably well. As government bond yields stabilised, this robust performance continued through August, even as the Fed said it would begin offloading corporate bonds bought through its pandemic support plan. However, corporate bonds fell in September as the latest minutes from the US Federal Reserve's rate-setting committee suggested an increasingly hawkish approach from policymakers. However, data shows that the riskiest borrowers now constitute the largest portion of US high-yield issuance in over a decade. Nevertheless, issuances have remained high, with over US\$270 billion raised in the US high-yield market in the first five months of 2021. High yield continued to outperform investment-grade bonds into the end of the period.

Portfolio review

In terms of individual securities, our top performing holding was the 2027 bond of NEPI Rockcastle, the Eastern European shopping centre group, which has benefitted from easing lockdowns and an economic recovery. Similarly, the 2028 bond of publisher and conference company Informa has risen, as social restrictions have been lifted. The 2024 bonds of Alfa Group also outperformed.

On the downside, negative newsflow out of China, regarding the financial health of the property developer Evergrande, weighed on the broader Chinese real estate sector. This led to negative contributions from our holdings in Sunac and Country Garden. The high yield bonds of the German residential real estate company Adler Group also weighed on performance. It has been the subject of significant short seller interest, which is widely believed to have contributed to a 35% share price decline in September.

Outlook

Credit markets have enjoyed an extended period of low volatility and stable credit spreads over the summer as strong technicals, coupled with the economic recovery, have provided a near perfect backdrop. While we remain constructive overall on credit, we think we are entering a period of higher volatility compared to the summer. This is driven by a combination of peaking growth and higher inflation rates, as well as China slowing more than expected, including from stresses in its property sector. In addition, while well flagged, the tapering of the US Fed's asset purchases and the expected reduction in fiscal spending across the developed world, as Covid-19 support measures are phased out, will become headwinds for the market. This is somewhat countered by high savings rates among corporates and consumers, which should counterbalance the fiscal drag. We should get more clarity on the state of the US consumer when JPMorgan, banking barometer of consumer health, reports third quarter earnings on 13 October, followed by more money centres the next day. Furthermore, with more than US\$1.2 trillion debt issued in the US market in the year to date, we expect supply dropping in October, as earnings begin, to be a positive technical support for US credit. We also note the latest positive news of a potentially effective new oral drug for Covid-19 developed by Merck, which would support further normalisation of the public health crisis over time.

Market review

Globally, stock markets rose significantly over the past 12 months. Covid-19 was still the dominant factor at the beginning of the period, although stock markets had already begun their recovery from the lows of March 2020.

Supportive monetary and fiscal policy was prevalent over the period. The US Federal Reserve maintained the main US rate at near zero throughout the review period, while providing support through its bond-buying programme. Elsewhere, the European Central Bank ramped up its original €1.35 trillion stimulus plan to €1.85 trillion in December 2020. The US Congress passed two additional stimulus packages during the period, cumulatively worth around US\$2.8 trillion. In August 2021, the US Senate passed the US\$1 trillion infrastructure deal.

Markets fell at the beginning of the period, reversing some recent gains. In November 2020, however, the relatively smooth US presidential election – coupled with news of three major Covid-19 vaccines – buoyed sentiment. This persisted through to the end of 2020 due to the launch of vaccination programmes, the approval of stimulus packages, and the reaching of a Brexit trade deal.

Momentum stalled again in January and February 2021 as global bond markets experienced a marked sell-off, spurring worries that this could impact the fragile global recovery. This also negatively affected equities. However, equity markets

resumed their upward momentum, driven by economic optimism, vaccine rollouts, continued accommodative monetary policy and a strong corporate reporting season. The MSCI World Index reached a record high in August but sold off in September, as concerns grew over inflation and interest rate hikes. Economic unease led to selling across the globe, although Japanese markets rose.

Portfolio review

The Fund's performance benefitted from holding Dutch semiconductor equipment maker ASML. The shares advanced after it posted better-than-expected results and with rising demand for its machines, particularly from its core Asian clients. Avoiding Alibaba, the Chinese omni-channel e-commerce platform, also aided relative performance when its shares, along with the broader Chinese online industry, dropped when authorities initiated a far-reaching regulatory investigation into the company's practices. Elsewhere, US heavy machinery maker Deere & Co's shares gained following better-than-expected earnings, as demand for farm and construction machines improved. It subsequently raised its earnings forecast for the year.

By contrast, Fidelity National Information Services weighed on returns. The company is one of the main players in the global payments industry, and the stock sold off after news appeared that it had been in merger negotiations with another peer, Global Payments. The level of debt of the combined company worried investors. Other holdings to detract from performance were healthcare related, partly affected by investors moving to value-oriented stock in expectation of a global economic recovery. CSL, the Australian biotechnology blood-plasma focused company, weakened on concerns about blood plasma collection rates and associated costs caused by Covid-19 lockdowns. Lastly, Swiss drug maker Roche's shares fell when quarterly results missed market forecasts. Its core pharmaceuticals business was also hampered by Covid-19 lockdowns. Despite this, we believe its innovative pipeline of oncology and rare drugs will sustain its pricing power and provide better protection from copycat products in the long term.

Outlook

Stock markets may be headed for a period of volatility as investors mull over conflicting signals. Developed western economies seem to be recovering at a steady rate as they emerge from the effects of the previous Covid-19 wave. The resumption of business though, has met with supply side constraints, pushing raw materials and product prices higher, and prompting key central banks to closely monitor inflationary pressures and consider appropriate tightening measures. Elsewhere, while Covid-19 appears to be

World Equity Fund

endemic, the accelerating pace of vaccine production and inoculations should help many countries eventually achieve herd immunity, enabling them to keep their economies open.

Despite the sentiment-driven market conditions, we remain committed to our fundamental analysis-based stock-picking strategies. This is supported by our proprietary research platform and staffed by an experienced team that has successfully navigated many past crises. Hence, we continue to seek out attractively valued, resilient, well-run companies that are adapting well to the changing landscape and are poised for the growth recovery. At the same time, we are actively engaging with management to ensure robust corporate governance and environmental sustainability standards.

World Resources Equity Fund

For the year ended 30 September 2021

Performance

For the year ended 30 September 2021, the value of World Resources Equity – A Accumulation shares increased by 37.09% compared to an increase of 42.23% in the benchmark, the S&P Global Natural Resources TR Index.

Fund return: Source: Lipper, Basis: total return, published NAV to NAV, net of annual charges, gross income reinvested, USD.

Benchmark return: Source: Lipper, Basis: close of business return, income reinvested, gross of expenses, USD.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Globally, stock markets rose significantly over the past 12 months. Covid-19 was still the dominant factor at the beginning of the period, although stock markets had already begun their recovery from the lows of March 2020.

Supportive monetary and fiscal policy was prevalent over the period. The US Federal Reserve (Fed) maintained the main US rate at near zero throughout the review period, while providing support through its bond-buying programme. Elsewhere, the European Central Bank (ECB) ramped up its original €1.35 trillion stimulus plan to €1.85 trillion in December 2020. The US Congress passed two additional stimulus packages during the period, cumulatively worth around US\$2.8 trillion. In August 2021, the US Senate passed the US\$1 trillion infrastructure deal.

Markets fell at the beginning of the period, reversing some recent gains. In November 2020, however, the relatively smooth US presidential election – coupled with news of three major Covid-19 vaccines – buoyed sentiment. This persisted through to the end of 2020 due to the launch of vaccination programmes, the approval of stimulus packages, and the reaching of a Brexit trade deal.

Momentum stalled again in January and February 2021 as global bond markets experienced a marked sell-off, spurring worries that this could impact the fragile global recovery. This also negatively affected equities. However, equity markets resumed their upward momentum, driven by economic optimism, vaccine rollouts, continued accommodative monetary policy and a strong corporate reporting season. Markets sold off in September, as concerns grew over inflation and interest rate hikes. Economic unease led to selling across the globe, although Japanese markets rose.

Energy prices made sharp gains, with Brent rising steadily from \$41 to around \$74 over the reporting period. Meanwhile, gas prices jumped sharply in August. The

easing of Covid-19 restrictions caused a step jump in global demand leading to supply chains bottlenecks, exacerbated by weather related issues.

Portfolio review

The Fund made strong gains but underperformed its benchmark. Volatile energy prices were a key theme over the period. Our lack of exposure to oil and gas companies weighed on returns in a period of sharply higher oil and gas prices that benefitted both upstream and downstream operators. Moreover, higher input costs and Covid-19 restrictions pressured several holdings in the materials sector.

Barrack Gold weighed on returns as it suffered from a weaker gold price and falling production, with recent sales below expectation and costs higher. Industrial gases producer Air Products detracted from performance; its latest earnings were disappointing due to being hampered by resurgences of Covid-19 in various parts of Europe and Asia. Meanwhile, having no exposure to oil major Exxon Mobil also hit relative performance, as the company benefitted from a rising oil price. On a more positive note, the US oil and gas company EOG Resources contributed to performance, gradually recovering as demand for energy increased and oil prices strengthened. The company posted better-than-expected earnings, demonstrating its resilience amid bouts of volatility thanks to its cost efficiency and good operational expertise. Elsewhere, in the materials sector, Chilean chemical company SQM saw its share make significant gains. The company develops and produces products that focus on plant nutrients, iodine, lithium, and industrial chemicals. Analysts upgraded its earnings amid a tightening supply of lithium and increasing demand for electric vehicles. Lastly, relative performance was aided by having no exposure to London-listed Newmont Corporation, the world's largest gold producer, as it suffered from a falling gold price and stronger US dollar.

Outlook

Stock markets may be headed for a period of volatility as investors mull over conflicting signals. Developed western economies seem to be recovering at a steady rate as they emerge from the effects of the previous Covid-19 wave. The resumption of business though, has met with supply side constraints, pushing raw materials and product prices higher, and prompting key central banks to closely monitor inflationary pressures and consider appropriate tightening measures. Elsewhere, while Covid-19 appears to be endemic, the accelerating pace of vaccine production and inoculations should help many countries eventually achieve herd immunity, enabling them to keep their economies open.

World Resources Equity Fund

Continued

Despite the sentiment-driven market conditions, we remain committed to our fundamental analysis-based stock-picking strategies. This is supported by our proprietary research platform and staffed by an experienced team that has successfully navigated many past crises. Hence, we continue to seek out attractively valued, resilient, well-run companies that are adapting well to the changing landscape and are poised for the growth recovery. At the same time, we are actively engaging with management to ensure robust corporate governance and environmental sustainability standards.

Please remember that past performance is not a guide to future returns. The price of shares and the revenue from them may fall as well as rise. Investors may not get back the amount originally invested.

Market review

Global stock markets rose significantly over the past 12 months. Covid-19 was still the dominant factor at the beginning of the period, although stock markets had already begun their recovery from the lows of March 2020. Supportive monetary and fiscal policy was prevalent over the period.

Markets fell at the beginning of the period, reversing some recent gains. In November 2020, however, the relatively smooth US presidential election – coupled with news of three major Covid-19 vaccines – buoyed sentiment. This persisted through to the end of 2020 due to the launch of vaccination programmes, the approval of stimulus packages, and the reaching of a Brexit trade deal.

Momentum stalled again in January and February 2021 as global bond markets experienced a marked sell-off, spurred by worries of higher inflation. However, equity markets resumed their upward momentum, driven by economic optimism, vaccine rollouts, continued accommodative monetary policy and a strong corporate reporting season. After performing well during August, stock markets sold off in September, as concerns surfaced over supply chain bottlenecks, inflation and interest rate hikes.

Portfolio review

Our holding in InMode helped performance. The provider of devices that harness radiofrequency energy for cosmetic surgical procedures has seen its stock rally on increased adoption of its products, continued strength in the US, a growing global footprint and new product launches. Moreover, its diversified revenue base and high margin business model has supported the rising trend in its share price. Kornit Digital, a manufacturer of digital textile printers, saw its shares react positively to news of new client wins and partnerships. Additionally, the company reported impressive results, more than doubling sales over a 12-month period. The company continued to innovate and expand into new areas, thereby opening up fresh opportunities. Kornit's latest product is witnessing decent order momentum; it is a tool that serves to improve efficiencies between apparel brands and retailers and the fulfilment channel. Elsewhere, software developer Endava delivered consistent outperformance as it consistently delivered results above expectation. In addition, the shares were boosted when management raised its earnings guidance for 2022 at the company's latest results presentation.

By contrast, as with other e-commerce businesses in China, Baozun has seen its stock price sell off during the government's crackdown on the internet sector. Brazilian medical education group Afya underperformed after disappointing results. Sanofi India, the Indian branch of the global biopharmaceutical company, also weighed on returns when its stock fell on concerns over potential price cuts for its drugs.

Outlook

Investors tend to sell highly valued stocks when bond yields rally. This reaction may prove short sighted. Companies which are likely to fare best in the coming earnings season are those that have a clear competitive advantage or are well-run. Many of these trade at premium multiples.

Anecdotally, some of the supply bottle necks emanating from manufacturing hubs in Asia are now easing. Some raw material cost pressures are also lessening. It is also noteworthy that China's manufacturing activity has experienced a small contraction. In the West, we await to see the effect on labour participation from the withdrawal of government support schemes. All these factors suggest that supply chain pressure could start to moderate before year end. Overall, equity market performance may be tempered by gradual monetary policy normalisation and potentially higher taxation. As always, we recommend sticking to stocks with visible earnings growth and upward momentum bias.

Notes to the Financial Statements

1 Presentation of the Financial Statements

1.1 General

Aberdeen Standard SICAV I (the Company) was incorporated under the laws of the Grand Duchy of Luxembourg on 25 February 1988 as a société anonyme and qualifies as an open-ended société d'investissement à capital variable (a "SICAV") with UCITS status (an Undertaking for Collective Investment in Transferable Securities as defined in the European Union Directive 2009/65/EEC of 13 July 2009). The Company comprises various classes of shares, each relating to a separate portfolio (a "Fund") consisting of securities, mutual funds, derivatives, cash and other sundry assets and liabilities.

The Company is authorised as a UCITS under part I of the law dated 17 December 2010 on undertakings for collective investment, as amended.

At 30 September 2021, the Company comprises 63 separate active funds, providing shareholders with opportunities for investment in a wide variety of markets, securities and currencies.

1.2 Aberdeen Global Indian Equity Limited (The Subsidiary)

Indian Equity makes almost all of its investments in India through a wholly owned subsidiary, Aberdeen Global Indian Equity Limited a company incorporated in Mauritius. Transactions involving both the Company and its Subsidiary are accounted for in accordance with their economic substance and accordingly these financial statements reflect the activities of Indian Equity and of its Subsidiary as if all the activities had been undertaken by Indian Equity. On 30 May 2015, the tax residency of the subsidiary changed from Mauritius to Singapore.

1.3 Presentation of financial statements

The accompanying financial statements present the assets and liabilities of the individual Funds and of the Company taken as a whole. The financial statements of each individual Fund are expressed in the currency designated in the Prospectus for that particular Fund and the combined statements of the Company are expressed in United States Dollars (US\$). The financial statements have been prepared in accordance with Luxembourg GAAP and with the format prescribed by the Luxembourg authorities for Luxembourg investment companies.

As the financial statements are produced at a valuation point that is different from the daily dealing Net Asset Values (NAVs) calculated on 30 September 2021 (except in the case of Emerging Markets Infrastructure Equity and Latin American Equity, which are valued at 23.59 (Luxembourg time)), the NAVs shown throughout the report may differ from those advertised on 30 September 2021 for dealing in these Funds. Those NAVs may include dividend declarations effective for the distribution on 30 September 2021 and certain accounting adjustments relating to the year ended 30 September 2021.

The combined statements were calculated on the basis of aggregation of individual Funds statements with no elimination of cross-investments if any. As of 30 September 2021, the cross-investments within the Fund represent \$107,946,000, or 0.42% of the combined net asset value of the Fund.

A number of new sub-funds were made available to investors during the year as shown in the table below. The opening dates shown in the financial statements reflect the date of the first NAV calculation.

Fund	CSSF approval	First NAV calculation
ASI-CCBI Belt and Road Bond Fund	02 October 2020	23 October 2020
Climate Transition Bond Fund	05 May 2021	14 June 2021
Emerging Markets Sustainable Development Equity Fund	03 October 2019	09 December 2020
Global Climate and Environment Equity Fund	05 May 2021	06 July 2021
Global Dynamic Dividend Fund	16 July 2020	14 October 2020

Notes to the Financial Statements

Continued

A number of sub-funds closed to investors during the year as shown in the table below.

Fund	Final NAV calculation
Asian Property Share Fund	08 June 2021
Australian Dollar Government Bond Fund	31 March 2021
Brazil Equity Fund	15 October 2020
Frontier Markets Equity Fund	26 February 2021
Multifactor Global Equity Income Fund	18 May 2021
Russian Equity Fund	08 June 2021

Non going concern treatment

The financial statements of the Funds have been prepared on a going concern basis, except for the funds closed during the year (disclosed in the table above).

2 Accounting Policies

2.1 Accounting convention

The financial statements have been prepared under the historical cost convention modified by the revaluation of investments.

2.2 Assets and portfolio securities valuation

The market value of investments has been calculated using the last available prices at close of business on 30 September 2021 quoted on stock exchanges or over-the-counter market or any other organised market on which these investments are traded or admitted for trading.

If such prices are not representative of their fair value, all such securities and all other permitted assets will be valued at their fair value at which it is expected they may be resold as determined in good faith by or under the direction of the Directors.

In accordance with the Fund prospectus, the fair value adjustment mechanism is applicable whenever a triggering event occurs. During the year, no fair value adjustments were applied to any of the sub-funds.

Mortgage and other asset backed securities are independently priced using appropriate models and certain corporate bonds may be priced using indicative broker quotes.

Security Acronyms:

CLN	Credit Linked Note	DIP	Default In Possession
EMTN	Euro Medium Term Note	FRN	Floating Rate Note
GMTN	Global Medium Term Note	INDX	Index Linked
PERP	Perpetual	PIK	Payment In Kind
PREF	Preference Bond	VAR	Variable Rate Note
SINK	Sinking Bond		

2.3 Investment income

Interest is accrued on a day-to-day basis. In the case of debt securities issued at a discount or premium to maturity value, the total income arising on such securities, taking into account the amortisation of such discount or premium on an effective interest rate basis, is spread over the life of the security.

Interest income on bonds may be received either in cash or as a Payment in Kind ("PIK"). Where a PIK bond settles physically (either because it matures or it pays interest) the interest income is recognised as the lower of the market value and the nominal value of the settlement.

Notes to the Financial Statements

Continued

In the event where there is no physical settlement, the factor change on that holding is recognised as interest income in the Statement of Operations at the point when the factor change occurs.

Dividends are accounted for on an ex-dividend basis. Interest and dividend income are stated net of irrecoverable withholding taxes, if any.

Securities lending commission is accounted for on an accruals basis.

2.4 Foreign exchange

The cost of investments, income and expenses in currencies other than the Funds' relevant reporting currency have been recorded at the rate of exchange ruling at the time of the transaction. The market value of the investments and other assets and liabilities in currencies other than the relevant reporting currency has been converted at the rates of exchange ruling at 30 September 2021.

Realised and unrealised exchange differences on the revaluation of foreign currencies are taken to the Statement of Operations.

2.5 Realised gains and losses on investments

A realised investment gain or loss is the difference between the historical average cost of the investment and the sale proceeds.

2.6 Forward currency exchange contracts

Unsettled forward currency contracts are valued using forward rates of exchange applicable at the balance sheet date for the remaining period until maturity. All unrealised gains and losses are recognised in the Statement of Operations. Currently forward positions are not collateralised.

2.7 Futures contracts

Futures contracts are valued at the exchange quoted price at close of business on 30 September 2021. Initial margin deposits are made in cash upon entering into futures contracts. During the period the future contract is open, changes in the value of the contract are recognised as unrealised gains and losses by marking to market on a daily basis to reflect the market value of the contract at the end of each day's trading.

Variation margin payments are made or received, depending upon whether unrealised losses or gains are incurred. Variation margin payments are recorded in the futures margin account in the Statement of Net Assets and related movements on unrealised results are recorded in the Statement of Operations. When the contract is closed, the Fund records a realised gain or loss equal to the difference between the proceeds from (or cost of) the closing transaction and the opening transaction.

2.8 Swap contracts

Funds may enter into swap agreements such as credit default swaps, interest rate swaps, swaptions, overnight index swaps and inflation linked swaps. Gains or losses resulting from swap contracts are recognised in the Statement of Operations and Statement of Changes in Net Assets. Swaps are valued at fair value determined at close of business on 30 September 2021 using external independent third party supplied prices as determined in good faith, pursuant to procedures established by the Board of Directors.

2.9 Option contracts

Funds may enter into the purchase of call and put options. Gains or losses resulting from option contracts are recognised in the Statement of Operations and Statement of Changes in Net Assets. Options are valued at the exchange quoted price at close of business 30 September 2021.

Notes to the Financial Statements

Continued

3 Share Class Information

3.1 General

Within each Fund, the Company is entitled to create different share classes. These are distinguished by their distribution policy or by any other criteria stipulated by the Directors. Please refer to the Prospectus for further details. For a list of current live share classes please visit abrdn.com.

The Funds are valued at 13:00 hours Luxembourg time on each Dealing Day, with the exception of Emerging Markets Infrastructure Equity and Latin American Equity which are valued at 23:59 hours Luxembourg time on each Dealing Day.

Investors should note that the Dealing Days in respect of Emerging Markets Local Currency Corporate Bond shall be on each Business Day which is a Wednesday other than days during a period of suspension of dealing in Shares. If such Dealing Days are not a Business Day in Luxembourg, the Dealing Day will be the Business Day immediately following such day.

3.2 UK Reporting Fund Regime

UK Reporting Fund Regime Status is granted prospectively by the UK taxation authorities. It is the intention of the Board of Directors to continue to comply with the requirements of the Reporting Fund Regime for certain share classes.

Equalisation applies only to shares purchased during the distribution period (Group 2 shares). It is the average amount of income included in the purchase price of Group 2 shares.

Annually and within six months of the year end, the Manager will publish the UK Reporting Regime Report to investors for all share classes granted reporting fund status on its website (abrdn.com).

The UK Reporting Regime Report to investors for each share class can also be requested in writing by contacting the Shareholder Service Centre as detailed on the back cover of this Report.

3.3 Switches

The following information applies to all Funds, except if an exchange (or switch) request involves exchanging within, into or out of Emerging Markets Infrastructure Equity or Latin American Equity.

Shares in one Fund may be exchanged or switched into Shares of the same or a different Class in another Fund or of a different Class in the same Fund, subject to the qualifications for investment being met, on any Dealing Day for the relevant Funds. Shares in the same Class may be switched between Accumulation and Distribution shares within the same Class. Investors may switch either a specific number of Shares or Shares of a specified value.

For full details on switching contact the Global Distributor, UK Distributor, Transfer Agent or asi.luxembourg@abrdn.com

3.4 Swing pricing adjustment

Frequent subscriptions and redemptions can potentially have a dilutive effect on the Fund's NAV per share and be detrimental to the long term investors as a result of the transaction costs that are incurred by the Fund in relation to the trades undertaken by the Investment Manager.

The Board of Directors' current policy through delegation to the Investment Managers' Investor Protection Committee (IPC) is to apply a swing pricing adjustment to the NAV of each Class of Shares of all Funds. A swing factor is applied whenever net subscriptions or redemptions exceed a certain threshold determined by the Board of Directors (having considered prevailing market conditions).

The swing pricing adjustment will be recorded in the relevant Fund's NAV and becomes part of the Fund's relevant dealing NAV.

The swing pricing adjustment is a percentage adjustment applied to each share class in a Fund on a dealing day determined on the basis of estimates of any dealing charges (including commission and/or other costs) and/or any bid/offer spread that the Board of Directors believes are appropriate to take into account in respect of that Fund. Such dealing charges will reflect costs and liabilities not included in the calculation of the NAV of the relevant class.

Notes to the Financial Statements

Continued

The net asset values as at 30 September 2021 disclosed in this report do not include any swing pricing adjustments and hence may differ from those published on 30 September 2021 for dealing into the Funds.

The maximum swing factor rate applied on net subscriptions/redemptions exceeding a certain threshold as at and during the year ended 30 September 2021 was 1.50%. There is no pre-set maximum swing factor.

4 Expenses

4.1 Distribution fees

Class B, Class C and Class W shares are subject to an annual distributor fee of 1% except for Class B of Frontier Markets Bond for which a distributor fee of 0.75% is applied. These fees are accrued daily and paid monthly in arrears.

4.2 Management fees

The Management Company collects investment management fees calculated on the Net Asset Value of the Funds, accrued daily.

Where a Fund invests in an open-ended collective investment scheme which is operated or managed by the Investment Manager or an associate of the Investment Manager, no additional annual management charge will be incurred by the Fund on such an investment.

The following management fee rates were applicable as at 30 September 2021:

Fund Name	Class of Shares (%)							
	A,B,C,F,W	BA, BB	G,I,N	J	K	L	X	S

^A The management charge for Class N Shares of Aberdeen Standard SICAV I - Emerging Markets Infrastructure Equity Fund is 0.52% instead of 1.00%. All other Class N Shares have the same management charge as Class I Shares of the relevant Fund. Class Z Shares are not subject to any investment management fee charge.

4.3 Operating, Administrative and Servicing Expenses

Ordinary operating expenses incurred by Aberdeen Standard SICAV I will generally be paid out of the assets of the relevant Fund. To seek to protect the Shareholders from fluctuations in these expenses, the yearly total amount of these expenses to be borne by each Share Class (the "Operating, Administrative and Servicing Expenses"), is fixed at a maximum level of 0.60% of the Net Asset Value in respect of all Share Classes (except for Brazil Equity (closed on 15 October 2020), Russian Equity (closed on 8 June 2021) and Eastern European Equity where the corresponding maximum is 0.80%, and except Hedged Share Classes in respect of which a fee of up to 0.04% may be charged in addition by the Investment Manager for providing currency exposure services). The level of effective Operating, Administrative and Servicing Expenses below these maximum levels may vary at the Board of Directors' discretion, as agreed with the Management Company, and different rates may apply across the Funds and Share Classes. The Board of Directors may amend the maximum fixed level of the Operating, Administrative and Servicing Expenses applicable to each Share Class at any time at their discretion upon prior notice to relevant Shareholders.

In order to pass on economies of scales achieved by those Funds reaching significant levels of assets, the following discounts to the Operating, Administrative and Servicing Expenses will be applied:

In respect of all Share Classes of a Fund reaching a level of assets of at least (USD or the equivalent in another currency):	Discount to be applied to the Operating, Administrative and Servicing Expenses (per annum):
Below 2,000,000,000	0.00%
2,000,000,000	0.01%
4,000,000,000	0.02%
6,000,000,000	0.03%
8,000,000,000	0.04%
10,000,000,000	0.05%

Provided the relevant level of asset value is reached by a Fund on the last Business Day of each month, the discount will be applied to the relevant Fund for that month.

Operating, Administrative and Servicing Expenses (OASE) are paid through a bank account ("the OASE account") opened at the Fund's Depositary Bank in the Fund's name. Each sub-fund pays its fixed OASE to the OASE account which in turn is used to pay actual invoices.

The balance of the OASE account is not reflected in the daily NAV of the Fund or in the financial statements.

Full details can be found in the Prospectus.

Notes to the Financial Statements

6 Directors' Interests

None of the Directors were materially interested in any contracts of significance subsisting with the Company either during the year or at 30 September 2021.

None of the Directors have service contracts with the Company.

7 Changes In Investment Portfolio

The schedule of changes in the investment portfolio is available on request from the Registered Office in Luxembourg and from the local agents listed under Management and Administration and in the Prospectus.

8 Transactions With Connected Persons

Cross trades

Transactions with connected parties during the financial year were entered into in the ordinary course of business and on normal commercial terms between the Funds and the Management Company, Investment Manager, Investment Adviser and any entity in which those parties or their connected persons (as defined in the Code on Unit Trusts and Mutual Funds issued by the Securities and Futures Commission of Hong Kong) have a material interest. To the best of the Management Company's knowledge, the Funds' portfolios do not have any other transactions with connected persons except for those disclosed below.

Connected transactions

During the period the Investment Manager/Adviser undertook certain sale and purchase transactions which were enacted through broker entities forming part of the same group of companies as the Depository, BNP Paribas and the details of these are included in the table below. Such transactions were carried out on an arm's length basis at current market value and market rates, and consistent with and the best interests of the Company. To the best of the Investment Manager/Adviser's knowledge as at the date of preparing this Annual Report, there are no transactions between the Funds' portfolios and the Management Company, the Investment Manager/Adviser or any of their connected persons as principal.

^A There were no commissions paid to BNP broker entities for the year ended 30 September 2021.

^B The unrounded commissions paid to BNP broker entities for the year to 30 September 2021 was \$242.

8.2 Other transactions

Transactions with connected persons outlined in notes 4.1, 4.2 and 4.3 have been entered into in the ordinary course of business and on normal commercial terms.

As at 30 September 2021 other Funds/Trusts and mandates managed by abrdn plc held investments in the Company valued at US\$4,114,172,605.

9 Soft Commission/Commission Sharing

The Investment Manager has entered into soft commission/commission sharing arrangements with brokers in respect of which certain goods and services used to support investment decision making were received. The Investment Manager does not make direct payment for these services but transacts an agreed amount of business with the brokers on behalf of the Company and commission is paid on these transactions. The goods and services utilised for the Fund include research and advisory services; economic and political analysis, portfolio analysis including valuation and performance measurement, market analysis data and quotation services; computer hardware and software incidental to the above goods and services and investment related publications.

Notes to the Financial Statements

Continued

10 Equalisation on the Issue and Redemption of Shares

Equalisation is operated in connection with the issue and redemption of shares. It represents the income element included in the price for the issue and redemption of shares.

11 Overdraft Facility

The Company has a US\$50 million intra-day uncommitted unsecured credit line facility with Bank of America to finance short-term timing differences arising from subscriptions and redemptions. Any liability arising on this account will be recoverable from subscribers to the Company and is therefore not reflected in the financial statements of the Company.

12 Provisions For Taxes

Indonesian Taxes

Indonesian Government bonds issued in the domestic market are subject to 20% capital gains tax until 2 August 2021 and 10% from 2 August 2021.

The following provisions have been recorded in the other liabilities caption of the financial statements:

Fund Name	Currency	Provision for unrealised gains on IDR holdings '000
Asia Pacific Multi Asset Fund	USD	13
Asian Bond Fund	USD	15
Asian Local Currency Short Term Bond Fund	USD	6
Diversified Growth Fund	EUR	35
Diversified Income Fund	USD	38
Emerging Markets Local Currency Bond Fund	USD	145
Emerging Markets Total Return Bond Fund	USD	79

Indian Taxes

As a result of a tax reform in India, the capital gains tax on shares in Indian companies and units of equity oriented funds chargeable to STT has been extended to include a long-term capital gains tax on the disposal of Indian listed securities. Accordingly, with effect from 1 April 2018, capital gains from the disposal of Indian listed shares held for more than 12 months are now taxable at 10% of net capital gains exceeding INR 100,000 (plus additional local taxes) and 15% (plus additional local taxes) when the shares are held for less than 12 months. For the purposes of calculating a provision it is assumed that a long term holding strategy (more than 12 months) will be applied and therefore the provision will be based only on the long term rate and methodology.

Aberdeen Global Indian Equity Limited (a subsidiary of Aberdeen Standard SICAV I – Indian Equity), being a Singaporean tax resident entity, is expected to continue to benefit from exemption to Indian capital gains tax on any gains on disposal of shares which were acquired up to 31st March 2017. As such, no provision is accrued on any exempt holdings.

The following provisions have been recorded in the other liabilities caption of the financial statements:

Fund Name	Currency	Provision for unrealised gains on INR holdings '000

14 Redemption Charge

There are no redemption charges applicable to any Class of Shares.

15 Capacity Management Charge

This mandatory charge is levied by the Board of Directors and shall be collected for the benefit of the relevant Fund and is not payable to the Management Company or rebated to any persons by way of a commission or discount.

16 Securities Lending

The Company has entered into a securities lending program for a number of equity and fixed income Funds. In return for making securities available for loan throughout the period, the Funds participating in the programs received fees which are reflected in the Financial Statements of each participating Fund under the "Stocklending income" caption. The Company has appointed Securities Finance Trust Company (the operating arm of eSec Lending) as agent for the equity and fixed income lending program. As remuneration for this agency role, Securities Finance Trust

Notes to the Financial Statements

Continued

Company receives 15% of the fees from the securities lending program and the Company received 85% of the fees.

Collateralisation in the form of Government Bonds must be with a minimum issuer rating of AA (S&P rating) or Aa3 (Moody's rating) at a minimum of 102 -105 % (Min. 102% bond loan v. Sovereign bond Collateral, Min. 105% equity loan v. Sovereign Bond Collateral minimum margins). With respect to a government issuer that is rated by both Moody's and S&P, the lower of those two ratings shall apply.

The following countries may be accepted as collateral:

Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Japan, Luxembourg, Netherlands, New Zealand, Norway, Sweden, Switzerland, United Kingdom & United States.

Collateralisation in the form of Equities must be from the listed equities from the following indices, provided that no single issuer shall represent more than 10% of Equity collateral on a "per Approved Borrower" basis: 108% minimum margin. Borrowers' own stock is not acceptable.

ⁱ The unrounded direct operational costs and fees incurred for securities lending for the year to 30 September 2021 was \$220.

17 Withholding Tax Reclaims

Withholding tax reclaims have been filed in respect of the withholding tax applied on dividends received during the recent years.

The decision for claiming is taken by the Board of Directors based on the analysis of costs to be borne and maximum potential amount refunded. The costs for pursuing the reclaims are borne only by the Funds potentially entitled to the refunds and recorded under Operational Expenses.

It is not possible to assess the likelihood of success of these reclaiming actions. Consequently no receivables with respect to the potential refunded amounts are booked until they are virtually certain.

Any proceeds received from these reclaiming actions will be booked in the respective Fund's net asset values.

21 Corporate Governance

The Board has adopted the Principles of the ALFI Code of Conduct dated June 2013 ("the Code"), which sets out a framework of high level principles and best practice recommendations for the governance of Luxembourg investment funds.

The Board considers that it has been in compliance with the Principles of the Code in all material respects for the year ended 30 September 2021.

The Board meets regularly to consider the activities of the Company and receives reports on various activities, including compliance controls and risk management.

The Board of Directors has established an Audit Committee which is charged with reviewing the financial statements and the external audit process (including the appointment and remuneration of the external Auditor, subject to Shareholders approval), and reviewing and monitoring internal audit matters.

Notes to the Financial Statements

Continued

The Board of Directors has also established a Risk Committee which has oversight of the Risk Management Framework of the Company and specifically the effectiveness of risk management, governance and compliance activity.

The collective remuneration of the Board of Directors charged to the Company amounts to US\$345,948 for the year ended 30 September 2021 and is recorded under Operating, administrative and servicing fees.

22. Important events and prospectus updates

1. Change of base currency

China Onshore Bond Fund base currency changed from USD to CNH on 1 October 2020.

2. Change of Data Processing Agent

Effective 2 November 2020, that the data processing model was fully outsourced by the Management Company and therefore the following changes to the data processing agents were implemented as at the Effective Date:

Aberdeen Asset Managers Limited ceased to act as data processing agent and the function of sub-data processing agent and will no longer be delegated to DST Financial Services Europe Limited (now named SS&C Financial Services Europe Limited) and DST Financial Services International Limited (now named SS&C Financial Services International Limited);

International Financial Data Services (Luxembourg) S.A. (whose office is at 47, the avenue J.F. Kennedy L-1855, Luxembourg, Grand-Duchy of Luxembourg, R.C.S Luxembourg B81997), SS&C Financial Services Europe Limited and SS&C Financial Services International Limited (whose office is at St. Nicholas Lane, Basildon, United Kingdom SS15 5FS) (together, the "New Data Processing Agents") will act as data processing agents of the Company in replacement of Aberdeen Asset Managers Limited with effect as of the Effective Date.

The New Data Processing Agents will delegate certain processing functions to State Street Syntel Services (India), Victor Buck Services S.A. (Luxembourg), DST Worldwide Services (India) and IFDS Poland. Investor information to be shared with these entities includes Personal Data in accordance with the provisions set out under the Confidentiality and Data Protection heading in the Prospectus.

A new services agreement was entered into between the Management Company and the New Data Processing Agents, under which the New Data Processing Agents will carry out the same duties and responsibilities that are were carried out by the former Data Processing Agents and there will be no material change to such duties and responsibilities.

The Board of Directors of the Company considered this to be in the best interest of the Company and its shareholders for the Management Company to appoint the new Data Processing Agents.

The change in data processing agents and the sub-data processing agents will not materially prejudice the rights or interests of existing investors of the Company, and there will be no material change to the overall risk profile of the Company as a result.

There will otherwise be no material change in the operation and/or manner in which the Company is being managed and the costs of the such change will ultimately be borne by Aberdeen Standard Investments and will not result in higher fees for the Company.

Please be advised the Transfer Agent of the Company will remain as Aberdeen Standard Investments Luxembourg S.A. As such, all key details such as account numbers, bank details, trading connections such as SWIFT and Calastone will not be impacted by this change.

3. Reduction of Annual Management Charge

There was a reduction in annual management charges on Emerging Markets Total Return Bond Fund A, I and X classes on 1 December 2020.

Notes to the Financial Statements

Continued

4. Name change

Standard Life Aberdeen plc was renamed to abrdn plc on 5 July 2021.

5. COVID-19

Investors are aware of the COVID-19 outbreak and that the outlook for many capital markets remains uncertain.

The Board and Management Company have delegated various tasks to abrdn's Investor Protection Committee (IPC). The IPC is responsible for ensuring the fair treatment of investors. The IPC undertakes daily reviews of the following:

- Market liquidity across each asset class and Fund.
- Asset class bid-offer spread monitoring.
- Review of Fund level dilution rate appropriateness.
- Review of daily subscriptions/redemptions to anticipate any potential concerns to meet redemption proceeds.
- Any requirement to gate or defer redemptions.
- Any requirement to suspend a Fund (s).
- Any fair value price adjustments at a Fund level.

6. Changes to prospectus

- Change of the Asian Sustainable Development Equity Fund and Emerging Markets Sustainable Development Equity Fund investment objective & policy in October 2020.
- In order to comply with the requirements of the Sustainable Finance Disclosure Regulation in view of its entry into force on 10 March 2021, additional disclosures were included in the Prospectus from 5 March 2021 "the Effective Date".
- Change of the Emerging Markets Total Return Bond Fund benchmark, global exposure methodology (from Absolute VaR to Relative VaR), expected level of leverage and clarification of investment objective & policy in May 2021.
- Change of the Asia Pacific Multi Asset Fund global exposure basis from Absolute VaR to Relative VaR (Maximum 200%) in May 2021.

23. Subsequent events

- There was a reduction in annual management charges on Euro Government Bond Fund I and X classes on 1 October 2021.
- There was a reduction in annual management charges on GDP Weighted Global Government Bond Fund A and I classes on 1 October 2021.
- European Equity (ex-UK) Fund changed its name to Europe ex UK Sustainable and Responsible Investment Equity Fund; and changed its investment objective and policy to follow a Sustainable & Responsible Investment (SRI) equity approach on 1 October 2021.
- World Equity Fund changed its name to Global Sustainable and Responsible Investment Equity Fund; and changed its investment objective and policy to follow a Sustainable & Responsible Investment (SRI) equity approach; and reduced the annual management charge on I and X classes on 1 October 2021.
- European Equity Fund changed its name to European Sustainable and Responsible Investment Equity Fund; and changed its investment objective and policy to follow a Sustainable & Responsible Investment (SRI) equity approach on 12 November 2021.
- One new sub-fund was made available to investors subsequent to the year end. Emerging Markets Sustainable Development Corporate Bond Fund had its first NAV calculation on 1 December 2021.

Report on the audit of the financial statements

Opinion

We have audited the financial statements of Aberdeen Standard SICAV I and each of its sub-funds ("the Fund"), which comprise the Statement of Net Assets and the Portfolio Statement as at 30 September 2021 and the Statement of Operations and the Statement of Changes in Net Assets for the year then ended, and notes to the financial statements, including a summary of significant accounting policies.

In our opinion, the accompanying financial statements give a true and fair view of the financial position of Aberdeen Standard SICAV I and each of its sub-funds as at 30 September 2021, and of the results of their operations and changes in their net assets for the year then ended in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements.

Basis for opinion

We conducted our audit in accordance with the Law of 23 July 2016 on the audit profession ("Law of 23 July 2016") and with International Standards on Auditing ("ISAs") as adopted for Luxembourg by the Commission de Surveillance du Secteur Financier ("CSSF"). Our responsibilities under the Law of 23 July 2016 and ISAs as adopted for Luxembourg by the CSSF are further described in the « Responsibilities of "réviseur d'entreprises agréé" for the Audit of the Financial Statements » section of our report. We are also independent of the Fund in accordance with the International Code of Ethics for Professional Accountants, including International Independence Standards, issued by the International Ethics Standards Board for Accountants ("IESBA Code") as adopted for Luxembourg by the CSSF together with the ethical requirements that are relevant to our audit of the financial statements, and have fulfilled our other ethical responsibilities under those ethical requirements. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Other information

The Board of Directors of the Fund is responsible for the other information. The other information comprises the information stated in the annual report but does not include the financial statements and our report of the “réviseur d’entreprises agréé” thereon.

Our opinion on the financial statements does not cover the other information and we do not express any form of assurance conclusion thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit or otherwise appears to be materially misstated. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report this fact. We have nothing to report in this regard.

Responsibilities of the Board of Directors of the Fund and Those Charged with Governance for the financial statements

The Board of Directors of the Fund is responsible for the preparation and fair presentation of these financial statements in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements, and for such internal control as the Board of Directors of the Fund determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the Board of Directors of the Fund is responsible for assessing the Fund’s and each of its sub-funds’ ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Board of Directors of the Fund either intends to liquidate the Fund or any of its sub-funds or to cease operations, or has no realistic alternative but to do so.

Those charged with governance are responsible for overseeing the Fund’s financial reporting process.

Responsibilities of the “réviseur d’entreprises agréé” for the audit of the financial statements

The objectives of our audit are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue a report of the “réviseur d’entreprises agréé” that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with the Law of 23 July 2016 and with ISAs as adopted for Luxembourg by the CSSF will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with the Law of 23 July 2016 and with ISAs as adopted for Luxembourg by the CSSF, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Fund's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Board of Directors of the Fund.
- Conclude on the appropriateness of the Board of Directors of the Fund's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Fund's or any of its sub-funds' ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our report of the "réviseur d'entreprises agréé" to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our report of the "réviseur d'entreprises agréé". However, future events or conditions may cause the Fund or any of its sub-funds to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

Luxembourg, 15 December 2021

Risk Management (Unaudited)

The market risk measurement and monitoring of the Funds is carried out using either the Commitment approach or the Value at Risk (VaR) approach.

Funds which do not make significant use of financial derivative instruments and/or limit their use of financial derivative instruments to efficient portfolio management or hedging strategies are monitored using the Commitment approach.

Funds which utilise financial derivative instruments for efficient portfolio management purposes and/ or for investment purposes in pursuing their investment objective (in addition to those used for hedging purposes) are monitored using either the relative or absolute VaR approach.

Risk Type

The Management Company uses the Commitment approach and the VaR approach for the Aberdeen Standard SICAV I Funds as detailed below.

Commitment approach

The Commitment approach is based on the positions of financial derivative instruments, converted into their corresponding underlying equivalents as per ESMA Guidelines 10-788 – BOX 2.

Netting and Hedging might be considered for financial derivative and their underlying assets. The sum of these underlying equivalents must not exceed the net asset value of the Fund.

The global risk on derivatives has been determined according to the commitment approach during the reporting year.

Value at Risk (VaR) approach

The Investment Risk Oversight Department monitors and reports market risk and VaR metrics using abrdn's risk modelling system, Sungard Advanced Portfolio Technologies (APT). This model estimates and computes variability and probability of the portfolio returns based on historical data (180 observations equally weighted) which is fed with data from the front office systems. A number of risk measures are produced to quantify the probability of loss at the sub-fund level for any given day, either as an absolute measure (absolute VaR), or in relative terms using a pre-defined benchmark (relative VaR).

In accordance with CSSF Circular 11/512, the regulatory VaR limit associated with a Fund's total portfolio positions must not exceed two times (i.e. 200%) the VaR of its assigned Risk Benchmark or 20% for Funds monitored under the absolute VaR approach. The Table below defines the VaR approach and its related Risk Benchmark for each Fund.

Multifactor Global Equity Income Fund	38.9%	101.3%	85.0%
Asia Pacific Multi Asset Fund (from 20 June 2021)	93.1%	116.2%	100.5%

Model assumptions for VaR table:

System:	Advanced Portfolio Technologies (APT) – Statistical Factor Model
VaR methodology:	Parametric
Confidence level:	99%
Holding period:	One month (20 Days)
Decay factor for exponential smoothing of the historical market data:	Nil
Historical observation period:	180 weeks

Objectives and limitations of the VaR Methodology

The Advanced Portfolio Technologies (APT) model uses statistical factor techniques to capture a maximal spanning set under its component model. Risk is subsequently decomposed according to explanatory variable regression techniques. The APT bond model provides an integrated framework to measure and decompose the risk of portfolios of all fixed income securities. These can include government and corporate bonds, convertibles, and various categorisations of swaps, futures and option contracts. Portfolios are modelled at the asset level to ensure every position is represented within the component approach. Optionality can be represented either through delta-adjustment or Monte Carlo techniques. The VaR model is designed to measure market risk in a normal market environment.

This method accurately prices all types of complex non-linear positions as well as simple linear instruments. It also provides a full distribution of potential portfolio gains and losses, which need not be symmetrical. If the underlying risk factors exhibit non-normal behaviour such as fat-tails or mean-reversion, then the resulting VaR will include these effects. However, tail risk can only be examined if the historical data set includes tail events. The distribution is calculated by using daily historical time-series data with implementation of an exponential adjustment.

The use of VaR has limitations because it is based on historical correlations and volatilities in market prices and assumes that future price movements will follow a statistical distribution. Due to the fact that VaR relies significantly on historical data to provide information and may not clearly predict the future changes and modifications of the risk factors, the probability of large market moves may be underestimated if changes in risk factors fail to align with the given distribution assumption. VaR may also be under- or over-estimated due to the assumptions placed on risk factors and the relationship between such factors for specific instruments.

Even though positions may change throughout the day, the VaR only represents the risk of the portfolios at the close of each month, and it does not account for any losses that may occur beyond the 99% confidence level. In practice, the actual trading results will differ from the VaR calculation and, in particular, the calculation does not provide a meaningful indication of profits and losses in stressed market conditions. To determine the reliability of the VaR models, actual outcomes are monitored regularly to test the validity of the assumptions and the parameters used in the VaR calculation. Market risk positions are also subject to regular stress tests to ensure that the fund would withstand an extreme market event.

Leverage

The expected levels of leverage indicated below reflect the use of all derivative instruments within the portfolio of a given Fund. An expected level of leverage does not necessarily represent an increase of risk in the Fund as some of the financial derivative instruments used may even reduce the risk. Shareholders should note that the "Sum of Notionals" approach of the expected level of leverage does not make a distinction as to the intended use of a derivative e.g. being either hedging or investment purposes.

Risk Management (Unaudited)

Continued

The "Sum of Notionals" calculation typically results in a higher leverage figure than for the commitment approach calculation predominantly due to the exclusion of any netting and/or hedging arrangements.

The average leverage figures below have been compiled based on the daily figures from the period 1 October 2020 to 30 September 2021.

	Global Exposure	Average Leverage %	
		Sum of Notional	Commitment

Remuneration Disclosure (Unaudited)

Undertakings for Collective Investment Transferrable Securities V Directive (UCITS V) Remuneration Disclosure UCITS Fund Annual Report and Accounts Aberdeen Standard SICAV I

Remuneration Policy

The Standard Life Aberdeen plc Remuneration Policy applies with effect from 1 January 2018. The purpose of the Standard Life Aberdeen plc Remuneration Policy (the "Policy") is to document clearly the remuneration policies, practices and procedures of Standard Life Aberdeen. It has been approved by the Standard Life Aberdeen plc Remuneration Committee and is subject to the Remuneration Committee's annual review. The Policy applies to employees of the Standard Life Aberdeen group of companies ("SLA").

The Management Company, Aberdeen Standard Investments Luxembourg S.A. is authorised and regulated in Luxembourg by the Commission de Surveillance du Secteur Financier ("CSSF") and is a wholly owned subsidiary of Standard Life Aberdeen plc.

The Remuneration Committee of Standard Life Aberdeen plc adopted a UCITS V Remuneration Policy to ensure that the requirements of the Undertakings for Collective Investment Transferrable Securities V Directive (UCITS V) are fully adhered to by the group. This policy applies to Aberdeen Standard Investments Luxembourg S.A. and the UCITS Funds it manages. This policy is available on request.

Remuneration Principles

SLA applies Group wide principles for remuneration policies, procedures and practices ensuring that remuneration design and the basis for awards will be clear, transparent and fair, in line with business strategy, objectives, culture, values and long term interests of SLA. Remuneration policies, procedures and practices should be consistent with and promote good conduct which includes sound and effective risk management and not encourage risk taking that exceeds the level of tolerated risk of SLA. Total variable remuneration will be funded through pre-agreed distribution metrics. Where SLA's financial performance is subdued or negative, total variable remuneration should generally be contracted, taking into account both current remuneration and reductions in pay-outs of amounts previously granted and having regard for SLA's long term economic viability.

In addition to applying the SLA wide principles above, Aberdeen Standard Investments ("ASI") applies a number of additional principles including the following, when determining remuneration for employees:

- a) Remuneration should be competitive and reflect both financial, non-financial and personal performance;
- b) Our remuneration design will align the interests of employees, shareholders and importantly our clients/customers;
- c) Our remuneration structure will reward delivery of results over appropriate time horizons and will include deferred variable compensation at an appropriate level for the employee's role;
- d) We will provide an appropriate level of fixed remuneration to balance risk and reward.

Governance and Regulatory Compliance

The Remuneration Committee is made up of independent non-executive directors and makes recommendations to the Board of Standard Life Aberdeen plc (the "Board") to assist it with its remuneration related duties. The Chief People Officer of Standard Life Aberdeen is responsible for ensuring the implementation of the Policy in consultation with the Remuneration Committee as well as other members of the Executive Committee ("Executive Body") (as defined by the Board), if appropriate.

Financial and non-financial criteria

Variable remuneration is based on a rounded assessment of Group, Divisional and individual performance. When assessing individual performance, financial as well as non-financial criteria are taken into account. Individual performance is based on the individual's appraisal, which includes an employee's compliance with controls and applicable company standards including the Group's Code of Ethics, including Treating Customers Fairly and Conduct Risk.

Remuneration Disclosure (Unaudited)

Continued

Conflicts of interest

The Conflicts of Interest Policy is designed to avoid conflicts of interest between SLA and its clients. This Policy prohibits any employee from being involved in decisions on their own remuneration. Furthermore, all employees are required to adhere to SLA's Global Code of Conduct, which encompasses conflicts of interest.

The Policy should, at all times, adhere to local legislation, regulations or other provisions. In circumstances or in jurisdictions where there is any conflict between the Policy and local legislation, regulations or other provisions, then the latter will prevail.

Remuneration Framework

Employee remuneration is composed principally of fixed and variable elements of reward as follows:

- a) Fixed reward (fixed remuneration: salary (and cash allowances, if appropriate); and Benefits (including pension).
- b) Variable reward (bonus, a proportion of which may be subject to retention or deferral depending on role and regulatory requirements) and senior employees may also be awarded a long-term incentive award).

Appropriate ratios of fixed: variable remuneration will be set to as to ensure that:

- a) Fixed and variable components of total remuneration are appropriately balanced and
- b) The fixed component is a sufficiently high proportion of total remuneration to allow Standard Life Aberdeen to operate a fully flexible policy on variable remuneration components, including paying no variable remuneration component.

Fixed Remuneration	Base salary provides a core reward for undertaking the role, where appropriate, and depending on the role, geographical or business market variances or other indicators, additional fixed cash allowances may make up a portion of fixed remuneration.
Benefits	Benefits are made up of: core benefits, which are provided to all employees; and extra voluntary benefits that may be chosen by certain employees and which may require contribution through salary sacrifice or other arrangements. Extra voluntary benefits are designed to support the health and wellbeing of employees through enabling individual selection based on lifestyle choices. Standard Life Aberdeen will ensure that the core and voluntary employee benefits policies are in line with relevant market practice, its views on managing its business risk objectives, culture and values and long-term interests and local requirements.
Pension	Standard Life Aberdeen's pension policies (which consist of defined contribution plans and legacy defined benefit plans) are in line with legislative requirements, governance structures and market practice, and reflect Standard Life Aberdeen's long-term views on risk and financial volatility, its business objectives, culture and values and long-term interests and local requirements. In certain circumstances, SLA may offer a cash allowance in lieu of any pension arrangement.
Annual Performance Bonus Awards	Employees who have been employed during a performance year (1 January to 31 December) may be eligible to be considered for an annual bonus in respect of that year. Eligibility criteria for an annual bonus are set out in the rules of the relevant bonus plan and/or contract of employment, as appropriate. The bonus plan in place is designed to reward performance in line with the business strategy, objectives, culture and values, long term interests and risk appetite of SLA. All Executive Directors are awarded bonuses under a SLA bonus plan as detailed in the Directors' Remuneration Report.
Other variable Pay Plans	Selected employees may participate in other variable pay plans, for example, performance fee share arrangements, where it is appropriate for their role or business unit. These plans operate under the overarching remuneration principles that apply across the group and, where appropriate, are also subject to specific principles governing incentives and are compliant with the requirements of any applicable regulatory standards.

Clawback/Malus

A clawback/malus principle applies to the variable pay plan. This enables the Remuneration Committee to seek to recoup the deferred amount of any unvested variable pay, in the exceptional event of misstatement or misleading representation of performance; a significant failure of risk management and control; or serious misconduct by an individual.

Guaranteed Variable Remuneration

Guaranteed variable remuneration is exceptional, occurs only in the context of hiring new staff and is limited to the first year of service.

Remuneration Disclosure (Unaudited)

Continued

UCITS V Identified Staff

Staff considered UCITS V Identified Staff are those categories of staff whose professional activities have a material impact on the decision making profiles of the Management Company or the UCITS Funds that the Management Company manages.

UCITS V identified staff will include; Senior Management; Decision makers, Staff engaged in control functions; and any employees receiving total remuneration that takes them into the same remuneration bracket as senior management and decision makers, and whose professional activities have a material impact on the risk profiles of the Company or the Funds that the Company manages.

Control Functions

SLA adheres to the principles and guidelines of regulations that apply to SLA in defining control functions. control functions include, but are not necessarily limited to, Risk, Compliance, Internal Audit and Actuarial functions or roles.

SLA will ensure that, as appropriate, senior employees engaged in a control function:

- a) Are independent from the Business Units they oversee;
- b) Have appropriate authority, and
- c) Their remuneration is directly overseen by the Remuneration Committee.

This is achieved by the main control functions being outside the business, and a material proportion of their annual incentives being subject to a scorecard based on the performance of the control function. Performance against the scorecard is reviewed by the relevant independent governing committee (either Risk & Capital Committee, or Audit Committee). SLA's People Function reviews the remuneration of employees in control functions and benchmarks with the external market to ensure that it is market competitive and adequately reflects employees' skills and experience.

Personal Hedging

UCITS V Identified Staff are not permitted to undermine the risk alignment effects of the UCITS V Remuneration Code. Personal hedging strategies; or remuneration-related insurance; or liability-related insurance is not permissible on remuneration.

¹ As there are a number of individuals indirectly and directly employed by Aberdeen Standard Investments Luxembourg S.A. this figure represents an apportioned amount of SLA's total remuneration fixed and variable pay, apportioned to the relevant UCITS Fund on an AUM basis, plus any carried interest paid by the UCITS Fund. The Headcount figure provided reflects the number of beneficiaries calculated on a Full Time Equivalent basis.

² The Identified Staff disclosure represents total compensation of those staff of the Management Company who are fully or partly involved in the activities of the Management Company, apportioned to the estimated time relevant to the Management Company, based on their time in role during the reporting period and the Management Company's proportion of SLA's total AUM. Across the 'Identified Staff', the average percentage of AUM allocation per individual based on work undertaken for Aberdeen Standard Investments Luxembourg S.A. as a Management Company was 19.92%.

³ Senior management are defined in this table as Management Company Directors and members of the Standard Life Aberdeen plc Board, together with its Executive Committee, Investment Management Committee and Group Product Committee.

⁴ This figure represents an apportioned amount of the total remuneration of the 'Identified staff' attributable to the UCITS Fund allocated on an AUM basis.

French Plan d'Épargne en Actions ("PEA") Disclosure (Unaudited)

The sub-funds have undertaken, by virtue of the application of article 91, paragraph L of Annex II of the French 'Code général des impôts', to ensure that at least 75% of the net assets of the Fund are permanently invested in the eligible securities mentioned in paragraphs a, b and c of section 1° of article L.221-31 of the French 'Code monétaire et financier'.

As at the date of this report, the sub-funds had the following % in PEA eligible assets:

European Equity Dividend 81.30%

European Equity 82.00%

European Equity (ex-UK) 78.84%

The PEA eligibility of these Funds results from, to the best knowledge of the Company, tax law and practices in force in France as at 30 September 2021. Such tax law and practices may change from time to time and, therefore, the Funds which may currently be held within the framework of a PEA could lose their PEA eligibility. The Funds could lose their PEA eligibility due to changes impacting their investment universe or benchmark index.

Shareholders have been notified that, as a consequence of the United Kingdom's withdrawal from the European Union, the European Equity Fund and the European Equity Dividend Fund are no longer eligible to the PEA after 30 September 2021.

Grand Duchy of Luxembourg

Additional information for investors in Germany

Marcard Stein & Co AG, Ballindamm 36, D-20095 Hamburg, has undertaken the function of Paying and Information Agent for the Company in the Federal Republic of Germany (the German Paying and Information Agent).

Applications for the subscriptions, redemptions, and conversion of shares may be sent to the German Paying and Information Agent.

All payments to investors, including redemption proceeds and potential distributions, may, upon request, be paid through the German Paying and Information Agent.

The full prospectus, Key Investor Information Documents (KIIDs), the Articles of Incorporation of the Company and the annual and semi-annual reports may be obtained, free of charge, at the office of the German Paying and Information Agent during normal opening hours. The statement of changes in the composition of the investment portfolio is also available free of charge upon request at the office of the German Paying and Information Agent.

Issue, redemption and conversion prices of the shares, and any other information to the shareholders, are also available from the German Paying and Information Agent.

Issue, redemption and conversion prices of the shares will also be available at abrdn.com and at the offices of the Transfer Agent. Any notices to the shareholders will be published on abrdn.de.

With effect from 1 January 2018 the German Investment Tax Act 2018 (GITA) significantly overhauled the existing taxation regime for certain German taxpayers. As of 1 January 2018 the Company will be treated as opaque for German tax purposes as opposed to being transparent, as it was the case under the former regime. From this date certain investors/shareholders in the Company will generally be subject to tax on actual distributions as opposed to deemed distributions. There will no longer be a requirement to publish a daily German tax rate for each share class. Alternatively, the GITA regulations require the upload of a daily equity ratio to WM Daten.

General Information (Unaudited)

Additional Information for investors in Switzerland

1. Representative

The representative in Switzerland is BNP Paribas Securities Services, Paris, succursale de Zurich, Selnaustrasse 16, 8002 Zurich, Switzerland.

2. Paying agent

The paying agent in Switzerland is BNP Paribas Securities Services, Paris, succursale de Zurich, Selnaustrasse 16, 8002 Zurich, Switzerland.

3. Place where the relevant documents may be obtained

The constitution documents, Prospectus, KIID's, articles of association, the annual and half-yearly reports and a schedule of purchases and sales for the Funds can be obtained free of charge from the representative's Zurich branch.

4. Publications

Publications in respect of Aberdeen Standard SICAV I are published on the electronic platform of fundinfo AG Zurich (www.fundinfo.com). The issue and redemption prices or the Net Asset Value with indication of "excluding commissions" are published on a daily basis on www.fundinfo.com.

5. Payment of retrocessions and rebates

In connection with distribution in Switzerland, Aberdeen Standard Investments Luxembourg S.A. or its affiliates may pay retrocessions in order to cover the distribution and procurement activities of shares. These activities include but are not limited to the organisation of road shows, the attendance of events and fairs, the production of marketing material and the training of distribution collaborators. The recipients of the retrocessions must ensure transparent disclosure and inform investors, unsolicited and free of charge, about the amount of remuneration they may receive for distribution. On request, the recipients of retrocessions must disclose the amounts they actually receive for distributing the funds of the investors concerned. Retrocessions are not deemed to be rebates even if they are ultimately passed on, in full or in part, to the investors. Rebates may also be paid directly to the investors in order to reduce the fees and cost attributed to the fund, as long as they:

- are paid from fees which have been charged to the assets of the Fund and not in addition;
- are paid on the basis of objective criteria;
- are paid to all investors fulfilling the objective criteria in the same amount and at the same time.

Rebates can only be paid if the following preconditions are fulfilled:

- The minimum investment in a collective investment scheme or in a range of collective investment schemes;
- The amount of fees resulting from the investment;
- The expected duration of the investment;
- The readiness of the investor to support the launch of the fund.

At the request of the relevant investor receiving such rebate, Aberdeen Standard Investments Luxembourg S.A. or its affiliates must disclose the amount free of charge.

6. Place of performance and jurisdiction

The place of performance and jurisdiction for the Shares distributed in or from Switzerland is at the registered office of the representative.
